Minneapolis, Minn.—The Minnesota State Florists' Association will hold its first annual picnic at Big Island park, Lake Minnetonka, July 15. An invitation has been sent to every florist in the state. There will be a complete program of sports, the committee of arrangements being A. S. Swanson, E. Nagel, C. N. Ruedlinger and E. P. Holm.

Greenville, Ill.—D. H. Zbinden, senior partner of the firm of Zbinden & Corboz, has sold his half interest to Mr. Corboz, on account of ill health. Mr. Zbinden, however, has bought the W. D. Donnell property, on East South street, where he will erect a greenhouse alone, for begonias, lettuce, mushrooms and carnations. Mr. Corboz will also continue on the Martin property.

Manchester, Mass.—The rose garden on the Spalding estate has been open to the public for several days and attracted large numbers of visitors. It includes 3,000 plants in over 500 varieties, a large proportion being hybrid teas. Mrs. H. L. Foote, of Marblehead, Mass., laid out and planted the garden and has charge of the same. She makes a specialty of planting and caring for rose gardens, importing the bulk of her stock.

Camden Station, Ky.—"We have had the most prosperous year in our times," said George O. Klein, manager of the Sunnymount Nursery & Floral Co. "We sold out of every blooming thing." Geraniums were in such large demand that they sold out so closely they have no stock plants left, and many orders had to be refused. The season has been so wet that people have kept right on planting long after the season usually ends. This has been an exceptional year for cauliflower in the gardens, for it does not usually do well here. Shrubbery has bloomed more perfectly than for many years and it will go a long way toward making business for the fall planters.

NATIONAL SWEET PEA SOCIETY.

Meeting for Organization.

The sweet pea interests of America formed a national organization at New York July 7 by the election of the following officers:

President—Harry Turner, Port Washington, L. I., N. Y.

Vice-president—W. H. Waite, Tarrytown, N. Y.

Secretary—Harry A. Bunyard, 342 West Fourteenth street, New York, N. Y.

Treasurer—Wm. Duckham, Madison, N. J.

Executive committee—W. Atlee Burpee, Philadelphia; A. C. Zvolanek, Bound Brook, N. J.; Wm. Sim, Cliftondale, Mass.

An Auspicious Start.

It was a comparatively few weeks ago that H. A. Bunyard conceived the idea that the time was ripe for the formation of an organization to work along lines similar to those on which so much of benefit has been achieved in England. That he was not mistaken was shown by the ready response to the request for premiums and by the gathering of twenty-five enthusiasts at the Museum of Natural History at the hour appointed for giving the society an auspicious start.

Prof. John Craig, of Ithaca, N. Y., occupied the chair and read a paper on "The Purposes of Trial Grounds."

By-laws were adopted, so that the society is fully organized and ready for business.

A banquet was held Wednesday evening, July 7, and the meeting and exhibition closed July 8.

The Exhibition.

Considering all things, the initial exhibition was an excellent one. The number of exhibitors was not so large as had been expected, but the eight competitors staged upwards of 1,500 vases in over 100 varieties. Harry Turner, president-elect and president of the New York Florists' Club, had eighty-four varieties. Peter Henderson & Co., New York, exhibited over 100 varieties of sweet peas, but not for competition. The exhibits occupied three tables each 100 feet in length. The room was handsomely decorated.

The peas were of generally excellent quality. The best varieties were thought to be Nora Unwin, Frank Dolby, Mrs. Eckford, Pink Spencer, Yellow Spencer, Helen Lewis, Lady Hamilton, Black Michael and Gladys Unwin.

The Awards.

The judges were Wm. Sim, Cliftondale, Mass.; A. C. Zvolanek, Bound Brook, N. J., and G. W. Kerr, Philadelphia. The awards were:

Largest collection of sweet peas, Boddington cup, to Harry Turner, gardener for Howard Gould, Port Washington, L. I.

Largest collection of sweet peas, Burpee cup, to Wm. Duckham, Madison, N. J.

Twenty-five vases distinct varieties, Henderson cup, to W. W. Rawson & Co., Boston.

Twelve vases distinct varieties, Rawson silver medal, to Chas. R. Hedden.

Six vases distinct varieties, Stumpp & Walter prize, Hon. Seth Lowe.

Ten vases Spencer or Unwin flowered, Dreer prize, Hon. Seth Lowe.

Six vases in six varieties, Morris County Gardeners' prize, Wm. Duckham first, Seth Lowe second.

Largest collection, open to trade only, Morse cup, to Arthur T. Boddington, New York.

Fifteen vases in fifteen varieties, Thorburn prize, Hon. Seth Lowe first.

Spencer type introduced in 1909, Burpee prize, W. W. Rawson & Co. first.

Three vases varieties disseminated in 1909, Watkins & Simpson prize, Wm. Duckham first.

Vase mixed varieties, Michell prize, to T. S. Ormiston.

Three vases in three distinct colors, Pierson prize, Hon. Seth Lowe first, W. W. Rawson & Co. second.

Twenty-five stems lavender, Florists' Exchange prize, Hon. Seth Lowe.

Vase crimson, Young prizes, W. W. Rawson & Co. first, Hon. Seth Lowe second, T. S. Ormiston third.

Vase white, Rice prize, Hon. Seth Lowe.

Vase blue, Fiske prize, Hon. Seth Lowe.

Vase light pink, Turner prize, T. S. Ormiston.

Vase orange shade, Traendly prizes, W. W. Rawson & Co. first, Hon. Seth Lowe second.

Vase yellow, Totty prize, W. W. Rawson & Co.

Vase bicolor, Boddington prizes, W. W. Rawson & Co. first, Hon. Seth Lowe second.

Miscellaneous Exhibits.

There were a number of miscellaneous exhibits, each of which was given special mention, as follows:

Julius Roehrs Co., Rutherford, N. J., orchids and decorative plants.

John Lewis Childs, Floral Park, N. Y., irises and pink callas.

Lager & Hurrell, Summit, N. J., table of orchids.

W. A. Manda, South Orange, N. J., table of orchids.

Palisades Nurseries, Sparkill, N. Y., thirty varieties flowers, of hardy herbaceous plants.

Harry Turner, Acalypha Sanderiana.

The Rosery, table decoration of sweet peas, one of the most attractive features of the show.

Harry A. Bunyard.

Chairman Committee of Arrangements for the New York Florists' Club Outing and Prime Mover in the Organization of the National Sweet Pea Society

SPRAYING FOR WEEDS.

The eradication of weeds by other than cultural methods has been a subject of study at a number of the agricultural experiment stations and elsewhere. This has resulted in the discovery that various chemicals through their corrosive or other action will destroy many kinds of weeds. As long ago as 1895 it was shown by the Vermont Experiment Station that the orange hawkweed, a pest in lawns and pastures, could be controlled by sowing salt over the lawns at the rate of about 3,000 pounds per acre without injury to the grass.

Lime, salt, arsenite of soda, gasoline, kerosene, crude carbolic acid, and copper sulphate have all been recommended for destroying weeds in drives, walks, tennis courts and other places where it is desired to keep down all plant growth.

SOUTH ORANGE, N. J.—It is said that Louis Becker owns a cat that has "mothered" a chicken waif while raising offspring of her own. The chicken has grown so large that Mr. Becker does not want it about the house, but he is having a hard time keeping the pets apart.

TERMITES ON ROSES.

We have been troubled with white termites, similar to the white ant, which eat the heart of the stem of the white rose plants. Can you suggest an effective way of getting rid of them? We have about 6,000 young rose plants, and should like to know of some liquid which we could pour over the plants and save the roses, killing all the termites and keeping them away in the future. Would Nicoticide or Nico-fume, diluted, do this without being harmful to the plants?

L.

I am not acquainted with the pest referred to. Ants can be gotten rid of by laying sugar in which some potassium cyanide, finely powdered, is mixed. They will eat this poison greedily; perhaps the termites will do likewise. Nicoticide and Nico-fume juice will not harm the plants if applied according to the printed directions. What you would seem to require, however, is some poison of an adhesive nature. Arsenate of lead paste, thoroughly dissolved in cold water and applied at the rate of one pound to ten gallons of water through a fine spray nozzle, should keep this and any similar pests in check. It will not injure the foliage, and the only objection to its use is that it gives the leaves a whitish appearance for some time. This, however, would be preferable to losing a lot of plants from termites.

C. W.

ROSES WITH OTHER STOCK.

Will you inform us what is the name of the rose having bronze foliage with a golden yellow flower? What sort of a rose is Rhea Reid, as to color and blooming qualities, in a small commercial place? Our rose house is 18x60, and runs east and west. We should like to put in about 400 roses, using the balance of the room for carnations. What carnations would do well with roses? Is Killarney a good all-round rose, also Chatenay, and what colors? Is there a good red rose that does not open as freely as the Richmond? Can American Beauties be grown to advantage in such a house as ours? How should roses and carnations be fed in winter, as regards bone meal and sheep manure?

E. M. D.

The rose with golden yellow flowers and bronzy foliage is probably Perle des Jardins, once quite popular as an indoor rose, but now little seen. Rhea Reid is one of E. G. Hill Co.'s introductions. At Paris in 1908 it was awarded a gold medal over eighty-three other roses as an outdoor bedder. It has been quite largely grown in America under glass. It has not attained Richmond's popularity, however. Some growers like it; others object to it, as the flowers, after being cut a day, turn a sour color. From what we have seen of it, we think Richmond will suit you much better as a crimson scarlet rose. It is a rather brighter color than Rhea Reid, and is by long odds the best red forcing rose in sight today.

Killarney is the most popular of pink forcing roses. It also succeeds well outdoors as a bedder. Mme. Abel Chatenay is a fine pink variety, but if you grow Richmond and Killarney, which will do nicely in a winter night temperature of 56 degrees, you do not want Rhea Reid or Chatenay. American Beauty wants a big, special house, and it never pays to grow it in a small house with other roses.

Very little winter feeding of either roses or carnations is advisable before January. Watch the cultural calendars for these flowers in the Review for later information on these points. Go slowly with bone, which must only be used with great caution, or much harm may result. Sheep manure will be a safer fertilizer for you to use.

C. W.

THE SMITH ROSE.

The South Park Floral Co., New Castle, Ind., and one or two other American growers have taken up the rose W. R. Smith, originated by the late J. A. Shellam, but the rank and file have been slow to see merit in it. What Hugh Dickson, the widely known rose raiser at Belfast, Ireland, thinks of it is this:

"I have no hesitation in saying this is one of the finest additions to teas sent out for many years. It is of American origin, and having tested its capabilities outdoors here during the past year I can with confidence recommend it. It is a rose of great size and immense substance, fine form and large smooth petals, and will be one of the leading exhibition teas, and at the same time the finest of all the classes for massing in beds. The growth and habit are a distinct advance on Maman Cochet, one of its parents, and in foliage it is much the handsomest of this section. The color is creamy white, flushed and suffused with bright rosy pink, opening freely in all weathers. This is a specially valuable rose for forcing purposes."

THE NEW YORK OUTING.

The greatest outing the New York Florists' Club has ever enjoyed took place July 1, at Duer's pavilion, Whitestone Landing. The total attendance, including the babies and the late arrivals by train, auto and carriage, exceeded 500. The committee deserves congratulations, for all its members worked hard, and some of them for weeks towards the success of the annual festival. Chairman H. A. Bunyard is a great organizer and his attention to details worked out a harmonious conclusion. Nothing was forgotten. The refreshments, the music, the bowling, the games, the dancing—everything was run on schedule time. All the events were well contested. The fields were large, the prizes liberal and the winners fought for the honors of conquest every inch of the way. The boat was not overcrowded. The best of good nature prevailed. The cream of the trade attended, and it was pretty thick cream when you realize that over half a thousand were catered to and satisfied. The dinners were ample and excellent. Everything was well oiled and moved like clockwork from start to finish. The affair was a financial success. It sets a pace it will not be easy to equal. The souvenir is a work of art and will long be cherished as a memento of the occasion.

Benjamin Hammond. Frank R. Pierson.

Snapshotted at the New York Florists' Club's Outing.

The prizes were won as follows:

Ladies' bowling match, Mrs. Anton Schultheis, first; Mrs. Louis Schmuts, Sr., second; Mrs. Grimm third; Miss Kingston fourth; Mrs. Wittman fifth; Mrs. Masur sixth. Mrs. Masur's score was 1, and she received the booby prize as her reward.

The baseball game, Benedicts vs. Bachelors,

The New York Florists' Club on its Annual Outing July 1, 1909.

won by the Bachelors—Manda, Reichers, Wuestman, Krekler, Reigo, Golbert, Cantillon, Tierney and Fred Krekeler, against Hildebrandt, Handel, Hornecker, Bogart, Phillips, Reunison, Meyer, Waibel and Allen, with Wm. Kessler umpire, score 7 to 0.

Race, girls under 5 years, Dorothy Rosback first, Dorothy Bolles second, Ethel Kessler third.

Race, children born in 1904, Margaret Bogart first, Philip Kessler, Jr., second.

Race, girls 5 to 8 years, Helen Abeel first, Mary Cashin second, Bessie Wise third.

Race, girls 8 to 12, Ethel Adams first, Marion Hughes second, Alice Walter third.

Race, girls 12 to 16, Anna Miesen first, Jeannie Birnie second, Freda Schenck third.

Race, young ladies 16 to 20, Alice Donnelly first, A. Birnie second, M. Brewer third, Flora Knight fourth.

Race, ladies over 20, Agnes Birnie first, Margery Birnie second, Emma Golsner third, Anna Secker fourth.

Married ladies' race, Mrs. Hornecker first, Mrs. Kingston second, Mrs. Mesham third.

Race, ladies over 45, Mrs. C. Weber first, Mrs. Iler second, Mrs. Winters third.

Ladies' walking match, Miss Birnie first, Mrs. Stokes second, Miss Guttman third.

Race, ladies over 175 pounds, Mrs. Masur first, Mrs. Schimmell second.

Tug of war, Seedsmen **vs.** Florists, won by the Florists.

Race, boys under 5, Alfred Schultz first, Phil. Kessler, Jr., second, Charles Traendly third.

Bowling, three frames, Andrew Wilson first, Rassback second, Meconi third, Miessem fourth, Fenrich fifth, Kessler sixth.

Hop, step and jump, Herman Rozens first, W. Bogert second.

Race, boys 5 to 8, Ira Freeberg and Jos. Walter tied for first, George Walter third.

Race, boys 8 to 12, George Harvey first, Robert Burnett second, W. Manda third.

Race, boys 12 to 16, H. Rozens first, Al. Rigo second, Philip Walter third.

Mile race, Paul Rigo first, Al. Rigo second, Chas. Bogert third.

Quarter mile race, P. H. Kingston first, S. Gilbert second, A. W. Sperling third.

Fat men's race, Frank H. Traendly first, W. A. Manda second, J. Harvey third.

Married men's race, A. H. Donaldson first, Phil. Kessler second, Henry Weissman third.

Growers' race, A. H. Donaldson first, Jos. Manda second, J. Bartunik third.

Three-legged race, Al. and Paul Rigo.

Throwing ball, Phil. Kessler first, Iler second.

Press bowling, J. Austin Shaw first, J. H. Pepper second, A. F. Faulkner third.

Sack race, Arthur Weston first, George Harvey second.

Seedsmen's race, Al. Rickards first, G. Ydo second, A. E. Wheeler third.

Largest family, Peter J. Walter. Joseph McMullen, of Whitestone, also reported a family of six children.

The handsomest baby, won by babies Fenrich, Hanig, Schloss, McMullen, Matthews and Traendly.

HAIL LOSSES IN JUNE.

The following is a list of losses adjusted and paid by the Florists' Hail Association from June 1, 1909, to July 4, 1909:

F. L. Lainson, Council Bluffs, Iowa	$ 44.74
L. G. McKenzie, Olathe, Kan.	45.64
Joseph Tosini, Sioux Falls, S. D.	117.26
P. Rizer, Blackwell, Okla.	52.00
Nellie Wright Fabyan, Geneva, Ill.	74.11
James M. Tanner, Emporia, Kan.	14.70
F. Calvert & Son, Lake Forest, Ill.	13.75
C. H. Kunzman, Louisville, Ky.	63.46
C. W. Strubel, La Fayette, Ind.	43.13
H. W. Buckbee, Rockford, Ill.	206.80
Furrow & Co., Guthrie, Okla.	255.52
G. Van Bochove & Bro., Kalamazoo, Mich.	1,629.66
Kindler Floral Co., St. Cloud, Minn.	2.20
A. J. Raub, La Fayette, Ind.	85.88
Margarethe Ergelland, Blue Island, Ill.	101.22
C. J. Lempe, Concordia, Kan.	10.80
Keeling & Leuner, Canton, Ill.	13.75
J. J. Thomas (Mgr.), Pueblo, Colo.	329.80
Summerfield Floral Co., Springfield, Mo.	$ 129.22
Chas. Summerfield, Springfield, Mo.	350.98
Nussbaumer Floral Co., San Angelo, Tex.	107.66
Percy R. Walter, Wakefield, Kan.	95.60
Jefferson Floral Co., Jefferson City, Mo.	11.90
Ki-ote Seed Co., Sioux Falls, S. D.	37.80
W. T. Atkinson, Pueblo, Colo.	45.00
C. H. Wallace, Pueblo, Colo.	99.90
F. B. Battles, Pueblo, Colo.	223.70
Thos. Burnett, Cincinnati, Ohio.	16.80

E. G. Donley, Pueblo, Colo.	231.50
Total	$10,993.46

OBITUARY.

Philip Purcell.

Philip Purcell, a florist of Bay Ridge, N. Y., died at his home, 357 Seventy-sixth street, on Saturday, June 26, at the age of 59 years. He left a widow, two sons and one daughter.

Adam C. Ullrich.

Adam C. Ullrich, one of the pioneer florists of Ironton, O., died at an early hour Sunday morning, June 27, of a complication of diseases, after an illness of about six weeks. He was born January 13, 1826, in Mutterstadt, Germany, and came to this country in 1847, locating in Indiana, later removing to Ohio, and all his life he had been a gardener and florist.

Mrs. Ullrich died about four years ago. The children that survive are Peter Ullrich, of Sedgwick; George, of Chicago; Will, of St. Louis; Albert, of Hamilton; Mrs. Thomas Peet, of Cambridge City, Ind.; Fred, of Youngstown; Lewis, Henry and Edward, of Ironton.

PROPAGATION OF HARDY PHLOX

How do you propagate hardy phlox? I notice spots on a great many leaves similar to strawberry rust. Is it detrimental? C. L. H.

There are several methods of propagating hardy phlox, but the most satisfactory method is to take cuttings in early spring, as soon as the plants start to grow. Place these in an ordinary propagating bench, and treat as you would mums or carnations, and they will root within three weeks. The best plan, when the cuttings are rooted, is to pot off singly and later transplant to nursery rows, but if a cool, moist day is selected few cuttings will fail if taken directly from the cutting bench to the open ground. These cuttings will produce large heads of bloom in September.

The spotting of the foliage is not at all uncommon, being especially bad on Miss Lingard. It is nothing serious, and I have never deemed it of sufficient importance to spray the foliage.

W. N. C.

PLEASE discontinue the advertisement; it has brought us all the orders we need. —B. HAMMOND TRACY, Wenham, Mass.

A. J. Guttman was in His Element at the Outing.

TERMITES ON ROSES.

We have been troubled with white termites, similar to the white ant, which eat the heart of the stem of the white rose plants. Can you suggest an effective way of getting rid of them? We have about 6,000 young rose plants, and should like to know of some liquid which we could pour over the plants and save the roses, killing all the termites and keeping them away in the future. Would Nicoticide or Nico-fume, diluted, do this without being harmful to the plants?

L.

I am not acquainted with the pest referred to. Ants can be gotten rid of by laying sugar in which some potassium cyanide, finely powdered, is mixed. They will eat this poison greedily; perhaps the termites will do likewise. Nicoticide and Nico-fume juice will not harm the plants if applied according to the printed directions. What you would seem to require, however, is some poison of an adhesive nature. Arsenate of lead paste, thoroughly dissolved in cold water and applied at the rate of one pound to ten gallons of water through a fine spray nozzle, should keep this and any similar pests in check. It will not injure the foliage, and the only objection to its use is that it gives the leaves a whitish appearance for some time. This, however, would be preferable to losing a lot of plants from termites.

OBITUARY.

Philip Purcell.

Philip Purcell, a florist of Bay Ridge, N. Y., died at his home, 357 Seventy-sixth street, on Saturday, June 26, at the age of 59 years. He left a widow, two sons and one daughter.

Adam C. Ullrich.

Adam C. Ullrich, one of the pioneer florists of Ironton, O., died at an early hour Sunday morning, June 27, of a complication of diseases, after an illness of about six weeks. He was born January 13, 1826, in Mutterstadt, Germany, and came to this country in 1847, locating in Indiana, later removing to Ohio, and all his life he had been a gardener and florist.

Mrs. Ullrich died about four years ago. The children that survive are Peter Ullrich, of Sedgwick; George, of Chicago; Will, of St. Louis; Albert, of Hamilton; Mrs. Thomas Peet, of Cambridge City, Ind.; Fred, of Youngstown; Lewis, Henry and Edward, of Ironton.

PROPAGATION OF HARDY PHLOX

How do you propagate hardy phlox? I notice spots on a great many leaves similar to strawberry rust. Is it detrimental? C. L. H.

There are several methods of propagating hardy phlox, but the most satisfactory method is to take cuttings in early spring, as soon as the plants start to grow. Place these in an ordinary propagating bench, and treat as you would mums or carnations, and they will root within three weeks. The best plan, when the cuttings are rooted, is to pot off singly and later transplant to nursery rows, but if a cool, moist day is selected few cuttings will fail if taken directly from the cutting bench to the open ground. These cuttings will produce large heads of bloom in September.

The spotting of the foliage is not at all uncommon, being especially bad on Miss Lingard. It is nothing serious, and I have never deemed it of sufficient importance to spray the foliage.

W. N. C.

PLEASE discontinue the advertisement; it has brought us all the orders we need. B. HAMMOND TRACY, Wenham, Mass.

A. J. Guttman was in His Element at the Outing.

RESULTS.
We give them. You get them.
We both have them.

IF the chrysanthemums are not on their benches, it is time to get them there.

THE sale for cut sprays of the rambler roses does not seem to justify denuding the gardens.

GLASS factories have closed for the summer and the big jobbers unite in predicting advances in prices.

MY MARYLAND is coming into the cut flower markets in a way to justify all the nice things said of it last fall.

JOHN M. GOOD says he thinks it will be many years before the prices of the best varieties of peonies will be cheaper than now; the demand is all for the better sorts.

WELL, the Fourth of July has passed again, the dullest day on the calendar for the florist, the one holiday that means nothing whatever of increased demand for flowers.

R. VINCENT, JR., & SONS CO. say that Geranium Mme. Recamier is, they consider, the best white they ever have seen, either as a pot plant or as a bedder. It is semi-double.

IT will be learned with regret that the health of John Thorpe, first president of the S. A. F., is so precarious that it is extremely doubtful if he will be able to attend the silver jubilee convention at Cincinnati next month.

T. ROCHFORD & SONS, the big English growers, have an interesting and attractive variety of Araucaria excelsa, differing from the type in having the tips of every growth creamy green, instead of deep green. It is named Silver Star.

CHEAP AT THE PRICE.

There are many factors which may influence an advertiser part of the time, but it is actual results which influence him most of the time.

The last six months have been the best in our history. Large quantities of carnations and tomatoes were marketed at fair prices, and the biggest season ever in shipping plants. We take this means to thank our long list of customers, old and new, for their patronage, and especially our thanks are due the Review, which has made so much of our success possible. It certainly is a privilege to be able to talk to your many thousands of readers so cheaply through its advertising columns.—Roney Bros., West Grove, Pa., July 5, 1909.

SWEET PEA SOCIETY.

S. A. F. Appoints Delegate.

Pursuant to a request of Secretary Bunyard, of the proposed National Sweet Pea Society, President Valentine has appointed F. H. Traendly to represent the S. A. F. at the coming meeting, which it is proposed to hold early in July.

July 2, 1909. W. N. RUDD, Sec'y.

THE S. A. F. CONVENTION.

Transportation and Other Matters.

It seems to be settled that no special rates will be granted for the convention, the traffic associations pointing out that the regular rates now quite generally charged, namely 2 cents per mile or 4 cents for the round trip, are precisely the same as the special rate of a fare and a third which the society used to have under the old system of 3 cents a mile, and they claim that nothing beyond this can be allowed. The fact is pointed out, however, that tourist rates are in effect from a great many points in the country to all the larger cities, and that by a little inquiry most of the members of the society can obtain a very low rate to some large city like St. Louis, Chicago or Buffalo, and from there join the local club and get advantage of any special arrangements which they are able to make.

This being the twenty-fifth meeting of the society; Cincinnati being such a central point; such great exertions being made by the Cincinnati people to make the reception and entertainment something out of the ordinary, all seem to insure a large attendance at the convention. Reports from all points indicate great interest in the convention and that an unusually large number have signified their intention of attending.

Superintendent Murphy reports an extraordinary demand for space, both in the number of applicants and in the large spaces required, which seems to insure a phenomenally good exhibition. The hall set aside for the trade exhibition is perhaps the best which the society has ever had, and the meeting hall, both in size, comfort and convenience and also in its easy access to the trade exhibition, seems to be nearly ideal. In the meeting hall is a magnificent pipe organ, and Vice-President Gillett has secured the services of one of the leading organists in Cincinnati for organ concerts previous to the opening of each session.

The preliminary program for the convention will be issued shortly and mailed to all members. Copies will be cheerfully sent to all others on application.

W. N. RUDD, Sec'y.

July 2, 1909.

CHICAGO.

The Great Central Market.

The week of July 4 is always about the dullest of the year in this market, but with those houses which have made preparations for summer stock there has been a surprisingly good shipping trade. It is evident that the summer business is on the increase in almost every locality to which Chicago flowers find their way. While there have come to be a large number of growers through the country who cater to their local wholesale demand, few of these are in position to make special provision for the summer trade. The result is that a number of buyers who have not been heard from frequently this spring, have now come into the market with desirable orders. The shipping demand is largely for the better grades of roses and the Beauty is the leader; there is no other rose which is so well liked for summer. Killarney also is called for, and some Kaiserin, but for other varieties there is not much call.

The shipping demand now takes few carnations, and only the best, except in the case of the department stores and some other big buyers whose first consideration is price and not quality. Lilies now and then are ordered for funeral work, but candidums won't sell. Outdoor flowers cannot be shipped and this cuts out sweet peas; there is a local supply of almost all outdoor flowers wherever there is any demand for them. The out-of-town buyers are taking a fair quantity of peonies, because they still are the showiest flower for the money. The city trade is down to about the lowest summer level. There is a little something

Peonies

Best Stock in the Market Today

Really good flowers are not plentiful—but **we can supply splendid Peonies in quantity,** easily the best flower to be had at this time; best for all purposes, biggest value for the money.

The Peony, when everything is right, is a reliable flower for shipping and use in July. But not all growers put up stock that will ship with satisfaction. We are headquarters for the Peonies of the oldest and most experienced grower—one whose stock always ships well.

It is better to order of Amling than to wish you had

Beauties

Beauties have shortened up and generally the quality is nothing extra. The stock WE handle is from plants grown specially for a summer crop—it is far and away the best in the market.

There's never any flower that will take the place of the Beauty with the flower-buying public. And there are no Beauties that will take the place of our Beauties with the Trade. Leading stores are buying in hundred lots—when THEIR customers see them, nothing else will sell.

Kaiserins

If you need good white roses, you want our Kaiserin—there's nothing else so good. We have a good cut in all lengths, but advise early ordering, for this kind of stock doesn't hang around.

Other Roses, as good quality as the season affords. Also Carnations.

Summer Flowers

No matter what you want in Summer Flowers, order of us and get good stock. Sweet Peas, Lilies, Shasta and Yellow Daisies, Gladioli and everything else in season.

Green Goods

We have long, heavy strings of Smilax in quantity. Farleyense and Adiantum. The finest Fancy Ferns sent out from Massachusetts this year.

Fancy Valley Always on Hand

doing in all the stores, but principally funeral work, and the bulk of the stock finds its outlet through the Greek stores and sidewalk dealers.

The weather has been extremely unfavorable. July 2 a maximum of 92 degrees was registered, and the next day a minimum of 55 degrees. Since then it has continued steadily unseasonably cold, with much rain. This has combined with other factors in reducing the supply. Beauties are less abundant than they were, but the demand also has decreased, so that prices have not advanced. Maid and Bride are not abundant and most of them are poor; the weather conditions have caused much mildew. There is a fair supply of good Killarney, with My Maryland coming in heavier each day. Kaiserin is short of the demand; the few good ones coming in each day are quickly picked up. Chatenay has made its final exit; hardly any growers will plant it for next year, and both Golden Gate and Uncle John will be little seen hereafter.

The carnation growers are preparing for replanting and supplies are shortening up. There continue, however, to be more than the market needs; only a small part of the receipts meet with satisfactory sale and growers' averages are extremely low.

There has been a tendency toward stiffer prices for peonies, but there still are peonies to be had at the buyer's own price. The keeping quality of much of the stock is questionable and those who find their flowers falling on being taken from storage are making haste to unload. Those who feel that they can depend on their goods are counting on good business as soon as these cheap lots are cleaned out.

Orchids are among the abundant items, for there is now little demand for them except where fine funeral work is to be made. Feverfew has come in heavily and is meeting with a quite fair sale. Water lilies are abundant; the lotuses coming in heavily from Iowa are not worth express charges. The rains have hurt the sweet peas and for a day or two good stock will be hard to find.

Twenty wholesalers have signed an agreement to close their stores at 1 p. m. Thursday, July 22, the day of the Florists' Club picnic.

Jensen & Dekema to Dissolve.

The firm of Jensen & Dekema is about to dissolve partnership. J. S. Dekema has been in California for practically the whole term of the partnership, having been compelled to seek a mild climate for his health, and J. E. Jensen has had the sole management of affairs. As Mr. Dekema will continue to reside in the west, the partnership will be brought to an end. Whether Mr. Jensen will continue the business for his individual account has not yet been determined, but it is to be hoped he will be able to make such an arrangement. He is an expert carnation grower and propagater and the firm has done a large business in rooted cuttings.

Club Meeting.

At its meeting at the Union restaurant, July 1, the Florists' Club elected Frank M. Johnson, of the A. L. Randall Co., secretary for the balance of the year. The election was necessary because the new by-laws combine the offices of recording secretary and financial secretary. They also reduce the number of trustees from five to three. Those elected were Leonard Kill, F. F. Benthey and H. N. Bruns. Mr. Kill was president last year, and it should be a source of satisfaction to him that out of a possible twenty-eight votes, with seven good men to choose from, he received twenty-five votes for trustee.

M. D. Neeley and F. C. Morris were elected to membership. Proposals numbered six, as follows: F. A. Benthey, August Dressel, James Curran, T. C. Yarnall, W. F. Hoerber, Fred Hoerber.

For the transportation committee, P. J. Foley stated that the Monon had been selected for the trip to the convention, a special train being assured, with a number of surprises in the way of entertainment in store. The hour of departure has not yet been determined, but all western and northern members of the S. A. F. are urged to get to Chicago Monday morning, August 16, to go on the special train later in the day.

The picnic committee reported all plans completed for a big outing at Riverview park July 22.

The cooling refreshments were appreciated rather more than usual. The club will take no recess this summer. There will be another meeting August 5.

June Weather.

The mean temperature in June was only three-fifths of a degree higher than normal. The percentage of possible sunshine was unusually high when the amount of rain that fell is considered. There were seven clear days, eleven partly cloudy and twelve cloudy, but the sun was unobscured for fifty-four and one-half per cent of all the hours it was above the horizon. The rainfall was over five inches, nearly twice what the average has been for June in the thirty-nine years since the government has been keeping record.

Japanese Sea Moss (Air Plant)

Just the Thing for Summer Window Displays — Cheap, Attractive and a Seller

FREE Simply to show the buyers how good our stock is, we will mail **a free sample** to any florist who writes for it before July 15. Various Notes.

The Eatons have opened their new store at 73 Jackson boulevard. It is the smallest flower store in Chicago, but the room is made to appear much larger than it really is by covering the walls with plate glass mirrors.

Peter Reinberg, Leonard Kill, John Schillo and their wives motored to McHenry Saturday to spend the Fourth.

N. J. Wietor and John Sinner are at Tomahawk lake.

Peter Reinberg has begun to cut My Maryland rose of fair length of stem.

Frank Johnson and A. J. Eckert, of the A. L. Randall force, spent the Fourth with a party of friends in a launch on Fox lake.

C. L. Washburn says that the orders coming to Bassett & Washburn indicate that good stock, especially of roses, has become scarce all over the country.

E. C. Amling says conditions have become such that the peony is again the popular flower, affording the buyers more for their money than anything else now in the market. He looks for a good business on this flower so long as the stock in storage holds its shipping quality.

W. N. Rudd was at Cincinnati July 2 on S. A. F. matters.

It is reported that the growers are again having their troubles with asters. Out southwest a large part of the plants have been drowned out, and at Des Plaines wire worm has taken half those planted by some large growers.

W. K. Kroeschell and Fred Lautenschlager were the guests of Alois Frey at Crown Point for the recent auto races. Their stand chanced to be just in range of the machine making the moving pictures, and since the races the pictures have been shown at several local theaters. Mr. Lautenschlager's evident enjoyment of the occasion has added no little to the success of the pictures.

C. W. McKellar says the down-eastern orchid growers are in full crop and are finding markets slow everywhere since the wedding season ended.

The west park commissioners secured only two bids on their specifications for rebuilding the conservatory in Garfield park. Where several local contractors had been expected to bid, only Lord & Burnham Co. and Hitchings & Co., both eastern firms, made tenders, and each in the vicinity of $70,000. The commissioners rejected all bids and will draw up new specifications. The opinion seems to be that they have no one but themselves to blame for the present conditions and that they are not yet ready to pay the price of a first-class building.

Zech & Mann have had auratum lilies for some time, the first to reach this market. John Zech spent a couple of days this week fishing in Wisconsin.

W. J. Smyth, July 6, was freed from the plaster cast that has confined his left knee for two weeks. It will be some time before he can use the leg as usual.

Poehlmann Bros. Co. began cutting Golden Glow chrysanthemums July 5, stock that of any other variety would be considered good for October. They report a large number of shipping orders for roses.

H. W. Rogers, who is the right-hand man of John P. Risch, is spending his vacation at the family home at Pentwater, Mich., and at Spring Lake.

Vaughan & Sperry report having sold the last of their cold storage peonies last week. The stock they now are handling was stored by the growers themselves.

E. E. Pieser, of Kennicott Bros. Co., says the first six months of 1909 gave them a fair increase in total sales as compared with the same period last year, but an increase not at all in proportion to the great increase in the quantity of stock handled.

C. M. Dickinson, at E. H. Hunt's, states that the firm has become the exclusive agency for the sale of the new Chicago sprayer.

Charlie Ernie has begun his annual contest with hay fever.

Percy Jones says that in spite of the low prices at which peonies have been sold, he has been selling just as many of Klehm's as ever and at as good prices.

Among the week's visitors have been W. J. Miller, of Pontiac, Ill.; Dr. S. J. Knapp, a peony grower at Evansville, Ind., on his way to Europe; John Karstens, Chattanooga, Tenn., buying material for five new houses 27x150, two or three to go up at once and the others later; Frank Riley, of the Iowa Seed Co., Des Moines, Ia.

Bowling.

Yarnall	160	113	113
Totals	517	514	565

The averages of the leaders are as follows: J. Zech, 179; G. Asmus, 173; A. Zech, 172; Bergman, 166; W. Graff, 156; W. Wolf, 155; F. Ayers, 152. The high five are entitled to places on the convention team if they hold their positions in the balance of the series.

CINCINNATI.

The Market.

Business continues fair for the time of year and I suppose we ought to be satisfied. The supply of stock shows signs of falling off. Roses are in fair demand and the better grades bring good prices. Carnations are not coming quite so fast, but still there are plenty of them. The hot sun has made the blooms small, but they sell well in spite of that. Sweet peas are doing well. Lilies are good property, there being a good demand for them at all times. There is a limited supply of pond lilies and a fair demand for them. Outdoor stock of various kinds helps to fill out, with a limited demand. The business is now confined mostly to funeral work, so white flowers have the call. We have a good supply of green goods of all kinds and a fine demand right along. The eastern fancy ferns are in and they are of fine quality.

The S. A. F. Convention.

W. N. Rudd, secretary of the S. A. F., was in this city July 2, and in the evening a conference as to S. A. F. matters was held at the Gibson house. Those present were W. N. Rudd, E. G. Gillett, Albert McCullough, R. Witterstaetter, and Superintendent Wm. Murphy, of the trade exhibit. Mr. Murphy reported that over 10,000 feet of space was already sold, but that there was plenty of choice space left. However, it would be well for those firms intending to exhibit to get in at once. It was decided to equip the exhibition hall and the meeting hall with electric fans, and to make other arrangements for the comfort of the visitors. At supper time Mr. Rudd was the host at a fine spread. On leaving for home, Mr. Rudd said, with great enthusiasm, that he was greatly pleased with the prospects and that he was certain that this meeting of the S. A. F. would go down into history as the greatest ever.

It has been about decided to hold the president's reception at the Zoölogical Gardens. This will be a most delightful place at which to hold it. The Zoo is located on the hilltops, where there is always a fine breeze blowing, and, no matter how hot the day, it is always cool there in the evenings. Besides that, the Zoo is a great attraction in itself and the visitor to this city who has not seen it has missed one of our greatest resorts. The Zoo contains some sixty acres of land, laid out as a park. There are beautiful trees, walks and flower beds and a lake. Then there are the animals from all parts of the world, with specimens of almost every species in existence. The collection of birds is one of the finest in the world. There is an up-to-date club house, where refreshments of all kinds are served. Also every afternoon and evening there are concerts by the finest bands of this country and Europe. This resort is frequented by the best people of this city and has gained a world-wide reputation.

A meeting of the ladies' committee was held on the afternoon of July 2, at Louis H. Kyrk's. Those present were Mrs. L. H. Kyrk, Edith Kyrk and Miss Hoffmeister. A permanent organization was effected, with Mrs. Kyrk as president and Edith Kyrk as secretary. The committee then entered into a general discussion of various topics pertaining to the S. A. F. convention. It was finally decided to send out cards to call a general meeting of the ladies for the near future, when the various plans could be decided upon. Miss Laura Pfeiffer will have charge of the ladies' bowling contests. These contests, as you will remember, will be held at Heidelberg, Ky.

I was surprised the other day to hear an out-of-town florist speak of Cincinnati as the hottest city in this country. I was still more surprised when I learned that this was a somewhat general opinion among those who are not acquainted with this city. Let me say to all those florists who may or may not attend the convention this summer, that there is no foundation for this belief. I have lived in this city for many years and I can say from experience that there is no more pleasant city in which to live

during the summer months than Cincinnati. When it is hot everywhere else it is hot here as well, but at no time is the heat so oppressive as it is in some places I have been. Cincinnati is gaining fame as a summer resort city, and it is well deserved. If you are downtown and feel warm, just jump on a street car and in fifteen minutes you are on the hilltops, where continual breezes blow. If you want to be still further convinced, look up the weather bureau report from this city and compare it with others. Now, don't stay away from this city because you think it will be hot here. To greenhouse men who are used to the melting temperatures under glass, Cincinnati will be a veritable paradise.

Wm. Nolan, a Cincinnati boy of years ago, but now with the Herms Floral Co., Portsmouth, O., was a caller and was royally welcomed by his many friends in this city. C. J. OHMER.

I FIND the REVIEW a cheer-up when one has the blues.—GEORGE SCHUBERT, West Hoboken, N. J.

I SHOULD rather miss my meals than miss the REVIEW, the brightest and best trade paper I ever had. No florist, however small, should be without it.—GEORGE TAYLOR, Lethbridge, Can.

ST. LOUIS.

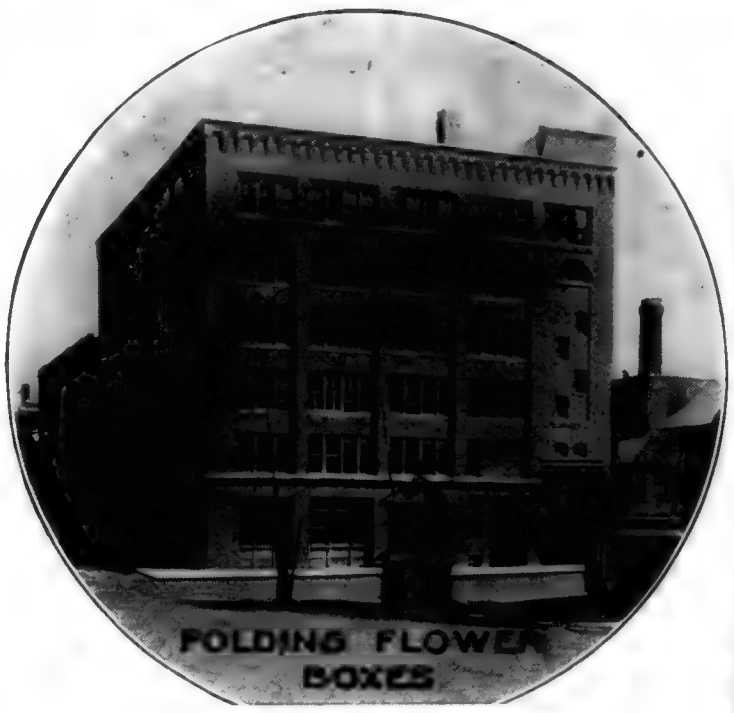
The Market.

The wholesale market was in poor condition last week. Fancy stock is scarce, but in the poorer grades there seems to be plenty. The demand has been poor all the week. The hot weather made things dull in all lines of business. Monday, July 5, being a holiday and most of the stores closing up half a day, we find the market in about the same condition as stated above.

Roses and carnations are poor in quality; so, also, are sweet peas. Outdoor stock is suffering for the want of rain, which would improve asters, gladioli, tuberoses and sweet peas. Everything in greens is plentiful and in good demand.

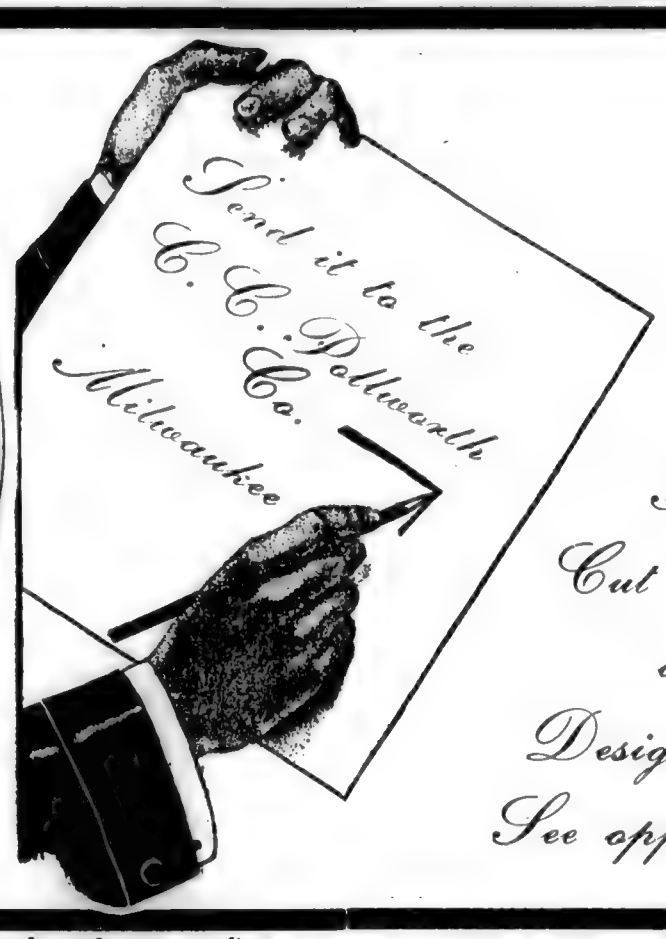
State Board of Horticulture.

The Missouri State Board of Horticulture held its first meeting here last week. The meeting lasted three days, from June 29 to July 1, and was held in the Woman's Magazine building. There was also an exhibition of fruits, vegetables and flowers.



The meeting was opened by President W. P. Stark at 7:30 p. m., June 29, with nearly 150 people present from different parts of the state. Wednesday, June 30, there were meetings, one at 9 a. m., one at 2 p. m., and another at 7:30 p. m., and on Thursday, July 1, one session was held, at 9 a. m. At each of these sessions there were a number of interesting speakers.

Among the local men who were awarded prizes were: Queen grapes, Henry Wallis; peaches, currants, blackberries and one variety of raspberry, A. Ruder; different kinds of raspberries, A. H. Ahlers; sweet peas, A. M. Bears first, and E. S. Hedges second; gooseberries, L. Serdier. The judges were M. B. Greensfelder and George T. Lincoln.



After the meeting the visitors were the guests of the directors of the Missouri Botanical Garden and were entertained with a lawn banquet Thursday, July 1, which is provided for in the will of the late Henry Shaw. There were present at this banquet all the delegation of the State Board, and about fifty members of the St. Louis Florists' Club and St. Louis Horticultural Society. Prof. William Trelease welcomed the guests with a short talk. After seeing all the sights of the garden, the guests declared they had spent an enjoyable afternoon.

Various Notes.

tion of Nurserymen, was with us last week, attending the meeting of the Missouri State Board of Horticulture, of which he is president. Mr. Stark says the mail vote will surely result in the selection of St. Louis for the next meeting place of the nurserymen.

Ludwig Zimmer, the Biddle market florist, sailed Saturday, July 3, from New York for Hamburg, where he will spend the summer.

Fred Meinhardt, state vice-president, is out with a circular urging the local florists to become life members of the S. A. F., to which some have responded.

Robert J. Windler has been cutting a fine lot of longiflorum lilies from his place in South St. Louis. C. A. Kuehn disposed of nearly 1,000 of them.

W. J. Pilcher, of Kirkwood, was around as usual last week, treating the boys to good cigars on his thirty-seventh birthday.

Henry Emunds, of Belleville, is cutting this early a nice lot of everblooming tuberose stalks. He will soon be cutting them by the thousands. Gladioli, too, will be plentiful with him.

Nearly all of the retail stores closed half a day July 4, as well as the wholesalers. This is one holiday when the florist is not busy.

C. W. Wors says cut flower trade at the summer gardens is dull these hot days and he is out picking ferns for the local trade.

Fred Ammann, of Edwardsville, was with us last week. He is busy planting and says he had one of the best business seasons in his experience.

George Windler has a new pipe casing device for holding up concrete benches, on which his many friends in the trade congratulated him as being a good thing.

George Waldbart is cutting a fine lot of Shasta daisies and sweet peas from his Clayton place. He will also cut considerable outdoor stock during the summer.

The trustees of the club have appointed Messrs. Pilcher, Fillmore and Beneke on the reception committee at the Florists' Club's picnic, July 21. This is the third term for them on this committee.

C. Young & Sons Co. made attractive window displays last week of fine potted longiflorum lilies. Blooming plants are still selling well with them.

The trustees of the Florists' Club met at Smith's Tuesday, July 6, and completed all matters pertaining to the picnic and made a full report at the club meeting Thursday, July 8. The souvenir program is full of good advertising and will more than pay all expenses of the picnic. All prizes have been donated. J. J. B.

Emile G. Popp, foreman of the landscape department of the Michel Plant & Bulb Co., has severed his relations with that firm, to take charge of a government position about August 18. Mr. Popp is one of the boys of the old school, having been under such men as James McKay and Chas. F. Evans, of Philadelphia; John Thorpe, of Chicago, and James J. Hill, of St. Paul, and for fourteen years he was gardener in the public parks of this city. He was the first gardener and park keeper at Washington Square and worked under the Democratic as well as the Republican administration. His father, Wm. Popp, was for years connected with city affairs as a civil engineer and landscape architect. Mr. Popp recently made a trip to Scotland, England, Ireland and Germany, and the horticultural books which he brought back with him are certainly worth seeing, as the old Scotch gardeners gave him books from Edinburgh, Dundee and Glasgow. R. C. Y.

ERIE, PA.

Business is quieting down as the hot weather approaches.

E. H. Blind, of Blind Bros., Pittsburg, was in the city over the Fourth.

Mr. and Mrs. T. Kinsman, of Buffalo, are the guests of Mr. and Mrs. A. J. Baur.

Dr. Harry Clawson and family, of Warren, Pa., are the guests of Mr. and Mrs. Henry Niemeyer. B. P.

NEW YORK.

The Market.

Beautiful, cool weather followed the hot spell and should have lifted prices, but the three holidays, the poor quality of most of the arrivals and the general summertime lassitude have combined to keep values down to about the same average prices as those of a week ago. There seems little prospect of much encouragement for growers, unless the coming scarcity should have its legitimate effect and develop an increased demand. Nothing out of the ordinary occurs to add to the business enthusiasm, and the majority seem to philosophically accept the inevitable and are giving their attention to putting their wholesale and retail stores in order, or have already

A Modern Sacrifice

To induce you to buy Cut Flower and Design Boxes we made the prices cheap enough (the Flower Boxes are as good as ever) so that you wouldn't mind putting in a stock of 500 or more in assorted sizes at these prices, which are much less now than later in the fall when the busy season opens up. We want to overcome the summer dullness and these prices ought to do it.

gone to the resorts for rest and recuperation.

Roses, carnations, lilies and all other flowers feel the strain and are at their lowest ebb. If the growers realize expenses nowadays, they are well satisfied. Buyers are sovereigns in the wholesale marts and no reasonable offer for anything is refused. Gladioli are coming fast. They will be the next of the specialties to flood the market, now that the peonies have departed and asters have begun to take their place. Everybody must be growing Crimson Rambler. Bunched nicely, they fell to almost nothing as the week ended. Far better left at home to beautify the country places or illustrate their value for hedging. There is little use sending the flowers to the wholesale market.

Various Notes.

This is sweet pea week in New York. The convention opened Wednesday, July 7. The exhibit and sessions are in the Museum of Natural History and the public may view the display without cost. The metropolitan papers are featuring the exhibit and giving it generous notices. The cunning hand of Organizer Bunyard is seen in the well created publicity. A banquet will be tendered exhibitors and promoters Thursday evening, July 8. Eminent speakers have been invited and the launching of the new society is made under happy auspices and with flying colors.

The seventy-eighth fair of the American Institute will be held September 21 to 23 at the Berkeley Lyceum building, on West Forty-fourth street. The annual chrysanthemum show of the society takes place at the same hall, November 10 to 12.

Charles Lenker, of Freeport, left Saturday, July 3, for a voyage to his old home, his first European trip in twenty years. He was accompanied by one of his sons.

Saturday, July 3, saw many of the growers of this vicinity, Long Island and New Jersey, visiting and fraternizing with their New York wholesale agents and materializing harmonious conditions, in preparation for the anticipated big fall and winter trade, which is now inevitable because of the assured harvest and the growing and universal prosperity.

Nathaniel Meckelberg, of Traendly & Schenck's, made an efficient umpire at the ball game.

Congratulations are universal for Sam Burnett, of Burnett Bros., because of his escape from single blessedness. The happy couple spent their honeymoon at Atlantic City.

The Greek florists are laying plans to make their outing, July 29, a record breaker in attendance. They have a big boat and orchestra engaged and will have two Athenian bills of fare that will tickle many American palates. The discus throwing and Marathon race will be features of the day.

The list of travelers to the Cincinnati convention is growing daily. To insure Pullman comfort, write Secretary Young and book yourself for the trip while desirable berths remain. The Cincinnati boys may rest assured New York will do its share to make the silver anniversary a grand success.

James Coyle, of H. E. Froment's, and Mrs. Coyle, will spend a month in their cottage at Highlands, N. J.

Most of the wholesalers are baseball fiends and recreate in the afternoons. The coming contests with the Chicago Cubs will clean up the street.

A. L. Barnett, after an absence of almost two years spent in the west, has returned to New York and will continue to represent Reed & Keller.

Sidney B. Wertheimer is sending his friends souvenir post cards from Baden-Baden, in Germany.

Outing Echoes.

A full list of the prize-winners, and some pictures, will be found on pages 12 and 13.

Only eight of all the club's committeemen were absent.

The banishment of ice cream and lunch from the boat and the noon breakfast on arrival worked like a charm.

The necessity of forming the baseball teams a week ahead was emphasized, only two of the four contests filled.

There was ample time for five frames for all the bowlers and next year will see this error rectified. Few can get their stride in three frames.

Some of the lady bowlers made their gentlemen contestants look like "thirty cents."

New York bowlers would do well to take Andrew Wilson along to Cincinnati.

The running races by the ladies were all hotly contested. There were few falls and some fast traveling. The grounds were perfect and there was room for all.

All the children's races had a dozen or more contestants. The little folks had a great time and carried home lots of prizes. In fact, over $300 in gold found its way into the pockets of the winners, thanks to the widespread generosity of the club members. Some of the successful ones covered all expenses and had a

good surplus on hand when the day was over.

Many large families were in evidence, several generations of the Schmutz loyalists as usual. These outings are growing into harmonious family reunions, and the wholesalers, retailers, growers and seedsmen are yearly getting nearer together and drinking into their systems more and more of the milk of human kindness.

Nearly all of the old veterans of the club were there, generously leaving the athletic contests to their younger brethren.

With Scotch piper, Scotch dances and Scotch music to burn, John Birnie was as happy all day as a schoolboy, and so were the representatives of many other nationalities. The orchestra was well primed and did not miss any of the popular melodies of the fatherlands. A goodly number tripped the light fantastic during the afternoon and on the moonlight sail, which lasted until 10 p. m.

Not an accident of any kind marred the joy of the day and good nature overflowed.

F. R. Pierson, Robert Simpson and Benjamin Hammond, the staid and reliable cornerstones of the club, discussed roses and big greenhouses and societies to their hearts' content. They all think the Sweet Pea Society is a winner and Secretary Bunyard a wonder-worker in what he has accomplished.

The 150 club members, who sent their photographs to the committee, have reason to respect their good judgment. The outing book will be a reference book for a decade; nearly all the members that do things are there. There are a few left at three for $1. Send for one. The oldest florist to one of the youngest are there illustrated.

A touching tribute to the memory of President Hallock was the silent standing toast, while the band played the dead march. The loss of John Scott and Herman Dreyer, always so loyal to the club's annual outings, was also sadly spoken of by many.

All the officials appointed did their duty willingly and well.

President Turner had his hands full in the baby contest and ended it by giving every tot a prize. There should always be a similar method. Every mother's baby is the prettiest.

In the tug of war twenty brawny seedsmen and florists strained their muscles to the limit. Patrick O'Mara and W. A. Manda were strenuous anchors and the florists won.

The mile race and quarter mile race were both well contested. The winner of the mile has run fifteen miles in practice.

The heat was tempered by clouds as evening approached, but the day as a whole could hardly have been better chosen.

The fat man's race had a baker's dozen of 200 pounders. The struggle between Frank Traendly and W. A. Manda was bitter and the ground trembled.

A. J. Rickards won the seedsmen's race at a 2:40 clip. J. Austin Shaw.

ST. PAUL.

The Market.

Spring trade in bedding plants was one of the best on record and practically all good stock was cleaned out by the middle of June.

In the cut flower line there has been a good demand for work for weddings and funerals, but at present business is quiet.

Various Notes.

The Minnesota State Rose Society held a successful flower exhibition in this city June 25. It was too early for a large display of roses, though some creditable collections were seen, but there was an abundance of good peonies, irises and other seasonable perennials. In the professional class the Jewell Nursery Co., of Lake City, had the largest and best display of roses. The Rose Hill Nursery, of Minneapolis, had a fine collection of roses and the best display of peonies.

Friday, July 2, the Minnesota State Florists' Association held a field day meeting at the rose gardens at Lyndale park, Minneapolis, and at the greenhouses. The rose garden, which was planted a year ago, was at its best. Supt. Wirth and his assistants deserve much praise for this garden, which affords a much needed object lesson for the planters. After viewing the rose garden a short business meeting was held at the park greenhouses and refreshments dispensed to the thirsty attendants.

The picnic committee has arranged for the first annual picnic of the Minnesota State Florists' Association to be held at Big Island Park, Minnetonka, July 15. A full program of sports has been arranged and every one in the trade in the state is invited to attend. Sports are to begin promptly at 11 a. m.

X. Y. Z.

DETROIT.

The Market.

Conditions are unchanged. There is so much stock of all kinds that there is hardly vase room at the commission houses. Carnations are falling off in quality as the result of extremely hot weather. Roses are plentiful; in some cases too much so. Kaiserin is now coming in and displacing Bride. Peonies are rapidly nearing the end. The stock now available is not to be compared with that of some weeks ago.

Various Notes.

July 1 the Michigan Cut Flower Exchange began closing at 6 p. m.

The flower stands in the Standard and Brown's drug stores, conducted by C. Hufford, have been closed for the summer months.

A recent visit to the well appointed establishment of Chas. Plumb found that gentleman busy making poinsettia cuttings. Most of the mums were already planted and, if the present appearance of the stock is any criterion, Mr. Plumb will cut some fine blooms this fall. A new range of about 10,000 feet of glass is about ready for the bars. This additional glass will give room to double up on the number of roses, chrysanthemums and carnations grown. The new houses will be devoted mostly to roses, of which Killarney and White Killarney are already planted. All benches are solid, with cement sides. A larger stock of hydrangeas, ramblers, lilac, azaleas, etc., will also be grown. Mr. Plumb is probably the only Detroit grower who uses a special soil for bulbs and no doubt this is one reason for his success in that line.

J. F. Sullivan has made a carnation sale at 25 cents per dozen a regular feature every Saturday.

Chas. Warncke is one of the most popular of the Elks in this city. He is a member of our famous drill corps and is now at Los Angeles, Cal., attending the Elks' convention. From there he will wend his way to Seattle before returning home.

July 1 M. P. Hurlburt went into office as park commissioner, having been appointed by Mayor Breitmeyer. Wm. Dilger now is in charge of Belle Isle only, Robert Flowerday having charge of the city parks and boulevards.

Clyde Chase, of Schroeter's, has joined the band attached to McKay's European circus for the summer.

Bruno Schroeter, Jr., is taking a summer course at Ann Arbor. H. S.

Niessen's News Column

Bronze Galax

$1.00 per 1000; $7.50 per case. SPECIAL PRICE in more than case lots.

Bronze Galax is an indispensable article to the florist. We have them as good during the summer months as you can get them any time during the year. We claim to give you the cheapest galax on the market—not cheaper in price—but the best in quality. If you buy our galax you have no waste.

POSITIVELY

the best value in

Sphagnum Moss

6 5-bbl. bales for $10; single bales, $2.00.

Compare them with what is usually called a 5-bbl. bale and note the difference in size. All bales for shipping are wrapped. We would not ship them any other way.

Rose Plants

A list and quotations you will find in the previous issue of the Florist's Review. We guarantee them to give satisfaction.

PHILADELPHIA.

The Rising Eastern Market.

The glorious Fifth, the florists' only holiday, marked distinctly the line between the tremendous production and scarcity, a scarcity that would be even more apparent were business brisk. There was a fair demand in the first three days of July, Saturday being better than the other two. Sunday and Monday interrupted the demand, which set in strongly Tuesday, stocking up being encouraged by cool weather. Shipping is good for the season, one or two of the wholesalers being open Monday, July 5, to dispatch out-of-town orders. Easter lilies are the strong card this week. The supply of fair flowers is unusual for the season. Kaiserin is the leading rose of the day, My Maryland next. Beauties are averaging better as to flowers, less as to stem; in other words, the summer crop is in the ascendant.

Some growers are still sending in fair Winsor. Enchantress varieties lead other carnations, but the quantity is decreasing. Cattleyas are not in demand. Valley is in fair request and at times has been unusually scarce. Gladioli are plentiful; both indoor and outdoor grown are excellent. America leads. The cornflower-candytuft section of outdoor flowers has been strengthened by the arrival of Hydrangea paniculata. Good sweet peas sell. Greens are in good supply.

The Andorra Show.

When William Warner Harper undertook to give flower-lovers an object lesson in the possibilities in outdoor exhibitions a year ago, his efforts met with instantaneous success. The number of people who walked, rode and drove to the beautiful hillside at the top of the picturesque Wissahickon drive was so large as to astonish those who have attended floral exhibitions in the heart of the city. Nature's gem with nature's setting appealed irresistibly.

The sunken garden or grotto, halfway up the hillside, above Mr. Harper's house, was again the scene of a beautiful iris show during the closing days of June. Words fail to paint the beauty of this floral theater. Pines, hemlock, spruce in the background, mossy banks, Japanese maples, ferns, and above all the Japanese iris, arranged in groups of purple, lavender, white and variegated, each by itself for better effect, a sight to satisfy an artist's soul.

The Andorra Nurseries have opened a field of great promise—the education of flower lovers on what may be termed the kindergarten or object lesson plan. This plan, attempted at some of the city shows, is seen at its best in the country and will, if intelligently followed out, undoubtedly bring wondrous results in the future.

The P. I. C.

REVIEW readers will recall a brief note in this column last month to the effect that the Philadelphia Insecticide Co. had been formed, with the object of assisting the growers in keeping their pets free from insect pests. It seems that an ininventor named Pullman, whose initials I unluckily failed to secure, remembering the story of the father and his little boy—but, by the way, as you may not know that story, it will give me pleasure to tell it to you: A father and his little boy were walking on the street, when his father pointed out a poor, seedy looking chap, but with an intelligent face. "That is an inventor, my son," the father said. Presently they passed a prosperous looking chap, sleek and rosy, evidently without a care. "Is that an inventor, father?" the guileless youth asked. "No, my son, that is a man who has profited by the inventor's invention." Mr. Pullman, I say, remembering that story, decided to associate with himself capital and business acumen in the persons of Charles and Louis Berger. They formed the Philadelphia Insecticide Co. last month and opened a factory at 324 Queen street, Germantown, where a motor grinds out insect powder of the P. I. C. brand from the raw material. Doubtless you would like to know the ingredients

contained in this insect powder, especially when you hear that it has proved most efficacious, destroying the happiness of many, many little aphides and bugs of larger and lesser note, but, alas, I cannot tell you the compounds. Even the knowledge of a newspaper correspondent has its limits, you know, and I can only refer you to the P. I. C. or to the enterprising seedsmen who have secured their agency.

Various Notes.

William F. Gude, of Washington, D. C., paid a brief visit to this city July 2.

Edwin Lonsdale spoke before the Florists' Club July 6 on "The Decoration of Lawns." It was well done.

John H. Humphreys, manager of the Andorra Nurseries, has just returned from a business trip west.

Walter P. Stokes returned July 6 from a few days' fishing at Newboro, Ontario.

John A. McIntyre made a brief visit to the south this week, returning by way of Washington.

M. Rice & Co. are receiving advance shipments of novelties for the coming season.

William J. Muth, manager of the Philadelphia Cut Flower Co., is enjoying a well-earned vacation.

H. Bayersdorfer & Co. have a new ware on their list of the season's novelties.

Eugene Weiss has planted 1,500 My Maryland and some White Killarney at his place at Hatboro, Pa.

The funeral of Israel W. Durham, July 1, brought out many beautiful floral offerings from the friends.

J. D. Eisele, vice-president of the Henry A. Dreer Co., sailed from New York July 3 on the Minnetonka for a two months' trip abroad. Mrs. and Miss Eisele accompanied him. PHIL.

NEGAUNEE, MICH.—The Cleveland-Cliffs Co. is enclosing part of the vacant ground south of the greenhouses, where shrubbery is to be put in.

BOYERTOWN, PA.—W. S. Funk & Son, on West Philadelphia avenue, have erected a two-story office building near their greenhouses, and they have had an electric motor installed.

GRAND RAPIDS.

The weather has been excessively hot, having a depressing effect on the flower market. Roses, while plentiful, are showing the effects of the heat and carnations are suffering severely; they will soon be too poor to send out.

July 3 the heat was varied by the severest storm that ever visited the locality. The washouts in John Ball park did approximately $10,000 damage.

Spring beading trade has been fine. Everybody sold out close. Vines, towards the close of the season, were an unheard-of quantity, nearly all the florists being compelled to refuse the filling of boxes and baskets largely on account of the lack of vines. We presume next year there will be so many they will be a drug. S. A. Nutt geranium was a good seller and was soon cleaned up, but there are few of even pink or white left. Although the call was for S. A. Nutt, the assortment went well. The great drawback to trade was cutting prices.

The summer quietness is with us now and the work of planting chrysanthemums is progressing rapidly. G. F. C.

BOSTON.

The Market.

The last few days in June business was quite good, due to heavy calls for Harvard commencement and other exercises. Since that time it has been extremely dull and, outside of funeral work and shipping trade to summer resorts, the calls for cut flowers will be light for the next ten weeks.

Roses of good quality are scarce. Killarneys, Carnots, Beauties and Kaiserins are holding out the best. Small lots of White Killarney and My Maryland are seen. Outdoor hybrids are over. Their season was short, owing to the intense heat. Bunches of various ramblers are arriving, but the demand for them is trifling. Carnations, like roses, are of inferior quality, good blooms being few. Sweet peas sell fairly well. Good flowers are not abundant, the bulk being short-stemmed owing to the dry weather. With present cool weather and more moisture they will improve.

Yellow marguerites are still seen, also a few callas. Easter lilies are sufficient for all demands. Gypsophila sells at 25 cents per bunch, sweet sultan at $1 per hundred. A good many bachelor's buttons are seen and some nice gladioli, America still selling the best. A few asters appeared last week, but it is rather early for the outdoor crop. Peonies are entirely over; their season, owing to the hot wave, was shorter than usual. The call for ferns and other greenery is light, while plant trade is practically nil.

The Moore-Livingston Adjustable Plant Stand (Patented)

The Best Plant Stand

On the market today. Comes in three sizes; is adjustable, and is made of Galvanized Iron or Oxidized Copper. With its aid you can place a plant from 6 to 48 inches from the floor. See illustration. Write, write or phone us, and we will tell you our nearest agent.

Manufactured by

The Moore-Livingston Co., Lansdowne, Pa.

Various Notes.

The sports committee of the Gardeners' and Florists' Club is hard at work on the program for the picnic, July 28, at Randolph Grove, and will have an unusually attractive list of track events. To reach Randolph Grove, any elevated, tunnel or surface car in Boston should be taken to Dudley street, changing at Mattapan for a Randolph, Avon and Brockton car, getting off at Pond street, one-third of a mile from picnic grounds. The running time is about one hour.

Philip Carbone, the well known Boylston street florist, sailed for Europe on the Romanic, July 3. This makes Mr. Carbone's second European trip this year, his previous one being after the Messina earthquake.

Charles E. Robinson, of the firm of H. M. Robinson & Co., is in New Hampshire for a few weeks' well earned rest. His firm has had an exceptionally busy season.

William Sim is in New York this week officiating as one of the judges at the sweat pea show. Maurice Fuld, of W. W. Rawson & Co., is also attending the exhibition.

This section experienced unusually cool but pleasant weather, July 3, 4 and 5,

maximum temperatures not exceeding 80 degrees on any day and minimum being between 50 and 60 degrees. What we need now more than anything else is a soaking rain.

The annual show of sweet peas and other seasonable flowers will be held at Horticultural hall, July 17 and 18.

J. T. Butterworth is around again after quite a sick spell. His son, George, has reached Europe on his annual trip.

The Gardeners' and Florists' Club is planning to hold a field day in August with W. B. Whittier & Co., South Framingham, and with the Bay State Nurseries early in September. Exact dates will be mailed to all members on picnic circulars.

Thomas Pegler handled the first asters of the season at the Park street market.

The Montrose Greenhouses are sending in Killarney roses of remarkably fine quality for midsummer, equal to what we are accustomed to seeing at Christmas.

E. B. Dane, of Chestnut Hill, who has a choice collection of orchids, is adding another house to allow of more space for his specialties. W. N. CRAIG.

Martin E. Tuohy sailed from New York on the Lusitania, Wednesday, June 30, on a trip to Galway, Ireland, to visit his mother and other relatives. He also expected to visit the continent. Mr. Tuohy makes this voyage about once in two years.

A RAMBLE IN JERSEY.

An eight-hour auto trip over those wonderful Jersey roads in the rose country of Chatham, Summit and Madison, in W. G. Badgley's new fifty horse-power machine, is an exhilarating experience, but fast as one may go, it would take a busy week to visit all these caterers to æsthetic flower lovers of New York city. So we will find it a necessity to go again.

Mr. Badgley himself must be busy while he sleeps. In addition to his two rose plants of 70,000 square feet, he has the big house bee buzzing in his bonnet and will build a house 60x300 in the fall. Next season he will have 20,000 Killarney and the same number of Maid and Bride. Killarney, he says, pays 70 cents to the square foot, where Bride and Maid yield but 40 cents. He thinks the small grower need have no fear of competition when he grows good stock, and that for the best there is always a paying market. Mr. Badgley is secretary of the Wilson Plant Oil and Fertilizer Co., which has a long list of specialties. Andrew Wilson, of this company, has just returned from a successful trip as far west as Pittsburg. Mr. Wilson is selling his retail flower store at Summit, as the supply business takes up all of his time.

About two miles out of Madison is the Henry Hentz place of 40,000 square feet and an independent ice plant of large capacity, two to three tons daily. In addition, an up-to-date dairy is maintained. Bride, Maid, Killarney and Beauties are grown. The hot water system was first used here for heating. This was changed to a combination of hot water and steam, and now, as best for rose growing, steam is used altogether. Cement benches have been installed, the experience being that the first year these are detrimental to Beauties, but the magnesia from the cement seems to be relished by all the other roses. The second year, however, the Beauties show no bad results and so the cement benches have come to stay. The stock is handled by Moore, Hentz & Nash, in New York. John Milton has been foreman here for many years. It is a delight to visit plants so cleanly and perfectly maintained.

The Brant-Hentz Co., close at hand, where Elwood Brant is manager, is the old Slaughter place rebuilt and renovated and added to until now it is one of the modern places of the country. There is some 60,000 square feet, including the two new houses 30x300. Beauties, Maids

and Brides are grown here and Mr. Brant has a new Bride, thornless, prolific and not susceptible to mildew, which he will put upon the market next season and of which he and other local rose growers speak highly. This company, it will be remembered, took first prize this year for its Beauties at the Buffalo rose show. Mr. Brant has a brother in Utica, in charge of the former rose plant of Peter Crowe.

Close to Mr. Badgley's are the places of Ernest Lawyer, A. P. Smith and Edward Behre, with from 5,000 to 25,000 square feet of glass, all shippers to the New York and Brooklyn wholesalers and all prosperous because of the excellence of their stock.

Righter & Barton have two large plants, 75,000 square feet altogether, devoted entirely to rose growing, their establishments being models of neatness. J. I. Raynor, in New York, handles their output.

Robert Schultz is back again from the road to his first love, Richmond, and aspires to be known as the Richmond King. He has 20,000 square feet devoted to it and says he will ship them every day this summer, so New Yorkers will never be out of red roses as long as Mr. Schultz holds the fort.

Close at hand is the busy mart of C. H. Totty, where the genial chrysanthemum expert was found overwhelmed with shipping orders and unable to keep up with the demand. Over 200 mum seedlings are being tested, largely the Pockett varieties from Australia. The veteran grower, W. Wells, of Merstham, England, has promised to visit Mr. Totty this fall. There is a Crimson Rambler hedge on Mr. Totty's grounds worth going far to see. His family go in a few days to their summer home at Canandaigua, N. Y. He favors Rochester for the S. A. F. convention of 1910.

Arthur Herrington has so far recovered from his illness as to be in evidence on the street in Madison, twenty pounds lighter, but convalescing rapidly.

Near Madison is the old Schultz place of 40,000 square feet, also devoted to roses, where Alex. Schultz presides. Close at hand is the rose plant of the

veteran, David Shannon, the genial son of Emeraldia. Near Chatham we pass Samuel Lum's place of 40,000 feet of glass, where seven of the houses are 300 feet in length. Not far away are the ten acres and 30,000 square feet of A. J. Guttman, where D. D. Storms is foreman, and Beauties, Killarney, Chatenay, Richmond, Kaiserin, Sunrise and President Taft are grown.

As an exception to the rule, we next reach the orchid factory of Lager & Hurrell, where good news is on tap and coming prosperity to the country emphasized in "the biggest orchid demand ever known," to quote from Mr. Lager. Large importations are arriving constantly. Over 100 varieties of orchids are included in the late arrivals, some of especial value and beauty. A great stock of Cattleya gigas is cut daily and sent to Jas. McManus, New York. In stock are over 500 distinct varieties. Beautiful vandas are just coming in flower. The exhibit is a grand one and worthy of a day's visit from every retail florist in the country.

Any trip through this section is incomplete without a visit to the great en-

terprise of L. B. Coddington. Here a new house 55x425 has just been added to the 130,000 square feet already in use for the manufacture of roses, and roses only, with a little asparagus on the side. A 105-foot stack, 4x4 inside, has just been completed, with a boiler pit 23x110, in which a twelve-ton tubular boiler of 150 horse-power is being installed, which heats 50,000 square feet. The big, new house was built by Hitchings & Co., and is devoted to Killarneys. Beauties, Brides, Maids and Richmonds fill the rest of the houses, many of them of modern size and construction. H. E. Froment, in New York, handles the entire output of the establishment.

Beyond and on the way to Summit are the establishments of Ed. Marble, A. E.

Jackson, who is building a new house; E. D. Badgley, Bernard Lapp and R. Boight, and over nearer Chatham the fine establishments of Messrs. Wagner, Falconer and Moore, the latter the home of Bridesmaid, where some of the original plants still bloom. It would take many times eight hours to see them all and do them all justice. What these three great rose centers have done for floriculture in this state and every state in the Union can never be put in words. Among the growers are several who have borne the burden and heat of the day for a quarter of a century and most of them are reaping well merited rewards.

J. AUSTIN SHAW.

MANCHESTER, MASS.

A large number of silver medals, cups and other specials attracted strong competition from the many skilled gardeners in this fashionable Massachusetts seaside resort.

In the regular rose classes prizes went chiefly to Miss A. G. Thayer, William Swan, W. L. Putnam and T. J. Coolidge, William Till gardener. The eagle-head cup, to be won two years by the same exhibitor for the best collection of garden roses, went to William Swan, also the Highwood cup for the best display of delphiniums.

W. E. Doyle's gold medal for the best table decoration by ladies went to Mrs. G. E. Cabot. A gold medal offered by Samuel Knight & Son for the table of roses arranged for effect went to James Scott, gardener to Mrs. H. L. Higgin-

When Writing Advertisers

son. J. M. Lipman and Mrs. J. McMillan had the best collections of sweet peas. Julius Heurlin's silver cup for twenty-five varieties hardy perennials went to William Swan, who showed an excellent collection. Mr. Swan also led for the 100-foot group of flowering plants, taking the Connolly silver cup. His geraniums were remarkably fine. Mrs. Lester Leland, Eric Weterlow gardener, took the Linehan silver cup for a similar group of flowering and foliage plants, well grown and finely arranged.

Mrs. P. Dexter, James Salter gardener, had the best collection of pansies. The Standley prizes for perennials went to Mrs. H. L. Higginson and Miss A. G. Thayer, James McGregor gardener. For Canterbury bells Mrs. H. W. Mason and H. S. Grow, A. E. Parsons gardener, were winners. In the geranium classes William Swan swept the deck, also winning for Canterbury bells and stocks. The Blue Hill Nurseries won the society's silver gilt medal for a collection of perennials in 150 varieties, filling two large tables, competition restricted to commercial growers.

Certificates of merit for rose displays were awarded to Mrs. W. H. Moore, Alex. Shaw gardener, Miss A. G. Thayer and Mrs. J. McMillan. W. W. Rawson & Co. had an extensive display of sweet peas, awarded a certificate of merit. Mrs. L. Leland, Mrs. P. Dexter and R. A. Mitchell received similar awards for displays of cut flowers, also Julius Roehrs Co. for orchids, Mrs. H. W. Mason for Canterbury bells, H. A. Dreer for ferns, which included the new Nephrolepis Scholzeli, and Mrs. J. McMillan for nymphæas.

Mrs. H. L. Higginson had the best collection of strawberries. Mrs. Gordon Abbott, William Irwin gardener, and Mrs. G. S. Curtis, Edward Hooper gardener, were successful in the vegetable classes.

Mrs. J. McMillan received a first-class certificate for superior culture of sweet peas and William Swan a similar award for culture of roses. The W. W. Rawson silver medal for the most successful competitor was easily captured by William Swan with fifty-three points, Mrs. Gordon Abbott having twenty-six points and Mrs. P. Dexter seventeen points. The judges, William Downs and Thomas J. Gray, performed their duties to the satisfaction of all. W. N. Craig.

TO GROW WITH SWEET PEAS.

Will you kindly inform us what flowering plants are best to grow in a cool house, with a night temperature of about 45 degrees? We will want them to flower from December 25 to April 1. We have a house in South Carolina, running north and south, 20x75, twelve feet to the ridge and seven feet high at the sides, with solid beds. On the center bed we will plant sweet peas and we want you to advise us as to the best flowering plants for the two side beds, which will stand the same temperature as the sweet peas. B. F. C.

There are a variety of plants which can be had in flower from December 25 to April 1 in a house such as will grow sweet peas well. The temperature is too low for most of the carnations, although you could do the Enchantress varieties nicely in a house which did not fall below 45 degrees at night. As a rule, however, carnations prefer a minimum of 50 to 54 degrees. The carnations, if grown, could easily be pinched so as to throw a good crop starting at Christmas and would flower for several months. Violets are by some successful specialists grown with sweet peas. The single Princess of Wales, if housed in your latitude in the early part of November, would be in good crop by the holidays. It prefers a night temperature of 40 to 42 degrees, but does well if kept a trifle warmer and given ample ventilation.

You could, if desired, utilize the side beds for a variety of bulbous stock, spiræas, azaleas and many other spring blooming plants, but as you probably want something from which you can pick flowers constantly for several months, we would advise either carnations, such as Enchantress, or single violets. Our own choice would be the latter, but in your state, where winter temperatures run so much higher, the carnations would, no doubt, give better returns than the violets. C. W.

Hanover, Mass.—J. W. Beal is building a large addition to his greenhouses. The new section is 100x100 feet.

Babylon, N. Y.—The Howell Carnation Co. has been incorporated, with a capital of $10,000. The directors are Frank A. Howell, of Jamaica, N. Y., and A. D. Donnelly and Mary A. Verney, of Brooklyn.

Cleveland, O.—Jones & Russell have secured a lease for a term of years on the corner store in the Euclid Point building, at Euclid avenue and Huron road. The term of lease was based on a price of about $1 per square foot.

PROVIDENCE, R. I.

The Market.

Funeral work, a few weddings and one or two belated musical recitals gave slight employment to the downtown florists last week. Sweet peas are about the only thing that can be commended. Roses and carnations are soft and generally unsatisfactory. Outdoor work is practically over and the growers are turning their attention to the overhauling of their houses and preparing for early benching.

Newport Flower Show.

The annual flower show of the Newport Horticultural Society was held in Masonic hall, Newport, June 28 and 29, with a splendid array of floral exhibits entered by the summer colonists, permanent residents and the regular florists. The prize honors of the exhibit were chiefly won by Colin Robertson, gardener for Mrs. Robert Goelet, and James J. Sullivan, gardener for Mrs. Ogden Goelet, the former getting eleven and the latter ten of the awards.

As usual, awards were also made to those who displayed worthy exhibits not designated in the schedule. Among these, one which attracted much attention, from the gardeners especially, was a showing by W. W. Rawson & Co., of Boston, of fifty varieties of sweet peas from their trial nurseries at Marblehead. Special awards were made to the following:

Henry A. Dreer, new fern, Nephrolepis Scholzeli, first-class certificate of merit.

William G. Postings, gardener for Mrs. Winthrop Chandler, exhibit of delphiniums, certificate of merit; and a new sweet-william, named Newport Pink.

James Hooper, gardener for Mrs. T. K. Gibbs, Eucalyptus ficifolia, certificate of merit.

Oscar Schultz, display of orchids, gratuity of $15; and Andrew Pew, new chrysanthemum, Golden Glow, certificate of merit.

Various Notes.

Florists' Review

When Writing Advertisers

Seed Trade News.

AMERICAN SEED TRADE ASSOCIATION.

Pres., J. C. Robinson, Waterloo, Neb.; First Vice-pres., M. H. Duryea, New York; Sec'y and Treas., C. E. Kendel, Cleveland, O.

THE government seed contract for 1910 calls for 27,830 pounds of lettuce and 56,667 pounds of radish.

THE Western Seed & Irrigation Co., Fremont, Neb., is inviting bids for the erection of an addition to its seed warehouse.

THE Western Seed Co., Oklahoma City, Okla., is in bankruptcy. The stock of seeds and florists' supplies will be sold July 12 by Webb Frantz, trustee.

THE family of Jay J. Utter, the grower at Bravo, Mich., have had a long tussle with measles this spring, Mrs. Utter and three children being ill.

C. R. ROOT, manager of the Barteldes Seed Co., Denver, states that in order to facilitate quick delivery of their mail they have adopted the address P. O. Box 1804.

A PROTEST of the Jerome B. Rice Seed Co., filed because of duty assessed on an importation through the port of Albany, N. Y., has been overruled for want of merit.

THE report from the Groningen district in Holland is of an unfavorable season for seed crops, especially of nasturtium and mignonette, with no prospect for other than a small harvest.

THE Maryland Agricultural Experiment Station, at College Park, has issued a bulletin, No. 133, entitled "Cabbage Experiments and Culture," which contains much of interest to seedsmen.

THE Bureau of Plant Industry, U. S. Department of Agriculture, has issued "Meadow Fescue, its Culture and Uses," a bulletin by H. N. Vinall, which will be of interest to the dealers in grass seeds.

THE import bulb list of the W. W. Barnard Co., Chicago, is so arranged that there is a blank at the left of each item, so all the customer has to do is to fill in the figures indicating the quantity wanted of each variety.

THE Galesburg Mail has discovered that Olmstead N. Ferris, of Galesburg, Ill., brought the dandelion to America from England in 1849, the seeds being distributed to several friends in New York, Ohio and Illinois.

THE Livingston Seed Co., Columbus, O., has leased a new four-story brick building on East Chestnut street, near the post-office, and will remove its seed stock and mail order departments there. The offices and retail store will remain on North High street. The change will give both ends of the business a much needed opportunity to spread out and grow.

SEED CONTRACTS SAFE.

Because of rumors afloat in the trade to the effect that contingencies had arisen affecting the contracts of the Department of Agriculture for seeds for the congressional distribution of 1910, the REVIEW asked for official information as to how matters stand. The following letter was written July 1, by Leon M. Estabrook, Assistant in Charge, Office of Seed Distribution. Mr. Estabrook said:

"I am directed by the Chief of Bureau to acknowledge receipt of your communication of June 29, 1909, and to advise you that practically all the seed required for the coming congressional distribution has either been purchased from surplus stocks or provided for by growing contracts.

"This office has no knowledge at the present time of any contingencies which would indicate that any of its contracts will not be fulfilled to the letter. The Government's interests in this regard are fully protected. The rumor referred to in your letter appears to be wholly without foundation in fact."

IMPORTS.

The imports of seed through the port of New York for the week ending June 26 were as follows:

Kind.	Pkgs.	Val.	Kind.	Pkgs.	Val.
Annatto	20	$ 140	Grass	10	$ 38
Caraway	415	3,013	Lycopodium	8	578
Cardamom	1	35	Millet	325	885
Celery	30	397	Poppy	100	495
Clover	353	9,223	Rape	4	19
Coriander	293	524	Other		1,392
Fennel	52	534			

In the same period the imports of bulbs, trees and plants were valued at $1,104.

FIELD'S GOOD YEAR.

The Henry Field Seed Co., Shenandoah, Ia., held its annual meeting July 1 and declared a dividend of eight per cent. Reports showed the past season a prosperous one, the increase in business being about fifty per cent over the previous year. All of the old officers and directors were reëlected, with the addition of D. S. Lake, the well-known wholesale nurseryman, to the board of directors.

For the coming year there will be no change in policy or management. They expect to make quite a feature next year

Mushroom Spawn

Read these unsolicited testimonials from a Grower and a Gardener.

From MR. THOS. JONES, PONDTAIL NURSERY, FLEET, HANTS.

I have no hesitation in saying without exception yours is the best Spawn I have ever handled. I state this after 40 years' experience.

From MR. C. MOORE, THE GARDENS, FRENSHAM PLACE, FARNHAM, SURREY.

I am delighted with the Mushroom Spawn. It has turned out the most productive I have ever had, the beds having yielded heavy crops for three months.

J. PITHER, Ltd.

Established 25 years. **UXBRIDGE, ENGLAND**

Bush Hill Park, Enfield, Middlesex, England, June, 1909.

Dear Sir:

re HUGH LOW & CO., Dissolved

In consequence of the voluntary dissolution of my late firm, I have much pleasure in informing you that I have taken over the Royal Nurseries, with the greater part of the stock. These Nurseries were formed by me in 1881, under the instructions of my late father, and since his death I have taken an active part in the direction of the business. The staff, which is transferred practically intact, includes such well-known men as my representatives, Mr. Harry A. Barnard, Mr. F. W. Ashton and Mr. Laurence J. Cook; Mr. Edward Tack, as orchid specialist and grower, and Mr. M. C. Allwood, the enthusiastic carnation man; Messrs. Moore, Reid and Meades amongst the roses and fruit trees, and Mr. Phillips in the general department. I feel that with such men at my back, clients can rely upon the same care and attention being given to their business as under the old regime.

Esteeming your orders and inquiries, believe me to be always at your service as heretofore.

Obediently yours,
STUART H. LOW.

Please address all communications STUART LOW & CO., Bush Hill Park, Enfield, Middlesex, Eng.

of the Terry peony collection, which, as was noted in these columns a month or so ago, was recently purchased from the Terry estate.

HOLLAND BULBS.

The report from Holland is of a cold, late spring, but it is said that "tulips are looking splendid in nearly all localities and, with the exception of the few places where the winter has been too much for them, the crop may be expected to be quite as good as last year's. As the orders booked are quite up to expectations, there is not likely to be any surplus of the ordinary trade sorts, but the demand for the higher priced sorts is considerably below last year's and these are likely to come down in price.

"As to hyacinths, the crop cannot well be estimated just yet, but the outlook is for a fairly good quality crop, but quantities will decidedly be less than last year. The crocus crop is not looking as well as might be and it is likely to be short again, but narcissi are fine and a good crop may be expected.

"Early gladioli, such as Colvillei and Blushing Bride, have suffered severely in many localities."

BERMUDA ONION SEEDS.

The prospects up to the date of writing (May 29) are surely more encouraging than was the case in 1908, yet the growers in Teneriffe are not satisfied, as we looked forward to a larger yield of Bermuda onion seed. I reckon that this fall the ratio will be 100 pounds of seed to every 800 or 900 pounds of onions planted, whereas we estimate on an average fair crop 100 pounds of seed to every 500 pounds of onions. Basing my calculations as above on the aspect of the fields and size of the heads bear-

Lilium Harrisii

Now Ready for Delivery

Our first consignments have just reached us and we are now filling early orders. **Easter comes very early next year, March 27,** and a good many growers will have difficulty in getting Japan Longiflorum in flower in time, and there will be an extra demand for Harrisii in consequence.

In view of the fact that **crop is short,** we advise those who have not already placed order to lose no time doing so. Last year we were not able to meet the demand for our selected Harrisii on late orders, so we urge customers to order without delay. At present we have a good supply still to offer, and will be able to take care of early orders, but there should be no delay in ordering, as there is sure to be a scarcity of good stock, especially in the large sizes.

We offer a selected stock of the original, true Harrisii for early forcing. These bulbs have been grown from the original pure Harrisii, and will be found splendid stock for early forcing, for which purpose Harrisii is so valuable. We have had the stock inspected, and are assured it is almost absolutely pure and almost entirely free from disease. It is not stock picked up indiscriminately from different sources, but is grown from one stock, and will be found very superior to the ordinary Harrisii usually offered, both in regard to freedom from disease and purity, and not the late type now so often furnished.

6/7 inch bulbs, 350 to the case	**$ 6.00 per 100;**	**$ 55.00 per 1000**
7/9 inch bulbs, 200 to the case	**9.00 per 100;**	**85.00 per 1000**
9/11 inch bulbs, 100 to the case	**20.00 per 100;**	**180.00 per 1000**

Full case lots at 1000 rates.

Large Specimen Hydrangeas

In tubs and half barrels for July and August Flowering

We make a specialty of these plants, and have a grand lot in the finest possible condition. Our plants have never been so well budded as they are this season. Flowers are just beginning to show color.

Extra fine plants, in tubs, $3.00 each; very large specimens, in half barrels, $5.00 and $7.50 each.

F. R. PIERSON CO.

Tarrytown-on-Hudson, :: :: New York

XXX SEEDS

GIANT PANSY The best large flowering varieties, critically selected, 6000 seeds, $1.00; half pkt., 50c; oz., $3.00; 2 oz., $5.00. 500 seeds of Giant **Mme. Perret** Pansy seed added to every $1.00 pkt. of Giant Pansy. Our pansy seed crop is extra good this year.

CASH. Liberal extra count.

WE CAN PLEASE YOU

JOHN F. RUPP, Shiremanstown, Pa.

RUPPTON: The Home of Primroses

ing seed, the contract or advance orders will not be fully covered.

At the present moment we need not fear much the outbreak of disease, and the crop may be considered as almost secured in that respect, but we have to contend from now until the time of harvesting with the ravages of strong winds, which are always a factor in the ultimate result of the yield.

Before closing this report I should mention that the White Crystal Wax is becoming a favorite in markets other than the United States, and, as the production of this, the finest onion in the world, is rather limited, especially the genuine and selected seed, we may look forward to a substantial rise in the price,

GIANT PANSY SEED

The KENILWORTH Strain

is unsurpassed: the immense flowers of 3½ to 4 inches are of perfect form and substance; every tint and shade is produced in striking combination and endless variation of beautiful colors and markings; it is the result of years of selection; it embraces the largest and best of English, French, German and American novelties; 1909 seed greatly improved by rich shades of brown, bronze, red and mahogany. New seed: 1000, 25c; 2000, 40c; 6000, $1; oz., $5.

RAINBOW is a blend of over 50 of the latest introductions of giant pansies, of the most beautiful, gorgeous colors, blotched, striped, veined, margined, etc. With every $1.00 worth of Kenilworth strain, I will send 1000 of Rainbow free; and with other amounts in like proportion.

a fact that should be communicated to all growers of this variety.

Federico C. Varela.

TRIALS OF SWEET PEAS.

W. W. Rawson & Co., of Boston, Mass., are conducting a series of interesting trials of new varieties of sweet peas, particularly of the Spencer type, at Rawson's Dahlia Farm, Marblehead, Mass. From the reports received, the sweet peas are just coming into bloom and no doubt there are many surprises in store for those who can find the time to study them.

Seventy-five varieties are grown here in an exhibition manner and, from the appearance of the plants, some excellent flowers should be expected. This firm expects to attend the sweet pea show at New York with an exhibit, and invites the different florists in the neighborhood of that city to avail themselves of this excellent opportunity of seeing the later introductions of European growers.

HAARLEM JUBILEE SHOW.

The jubilee exhibition at Haarlem, Holland, in the spring of 1910, will be a large affair. The complete program forms a book of eighty pages in the Dutch language. It contains lists for four exhibitions, and of the prizes accompanying them. There are, besides the prizes of honor from royalty and important authorities, seventy-five gold medals and about 2,500 prizes. Only Dutch exhibitors may compete for these, though the juries are international throughout. The permanent exhibition in the open air, to be held from March 23 to May 16, 1910, consists of 200 classes. The first special exhibition, from March 23 to 31, containing 275 classes, will chiefly consist of hyacinths, tulips, narcissi, crocuses, amaryllises and other bulbs and tubers in pots. A special division is set apart for retarded tuberous plants; and other important classes include rhododendrons, roses, lilacs, other shrubs, stove and greenhouse plants, and cut flowers. The second special exhibition consists of 300 program numbers, and will be held from April 15 to 24. It will in its general features resemble the first, while the third special exhibition, from May 4 to 12, will consist chiefly of orchids and objects of the florist's art. The usual judging of novelties will take place in the exhibition halls during the exhibition.

EXHIBITION AT ZEIST.

A great exhibition will be held this year, from August 25 to September 16, at Zeist, near Utrecht, Holland, by the Dutch Horticultural Society. Last year the programs were distributed through Holland and the neighboring foreign countries, and the attention of different horticultural centers has been drawn to the importance of the exhibition by the Netherland consuls. That the exhibition will in reality be of great importance and merit can be seen in the program, which provides for exhibits of practically all seasonable plants and cut flowers. Several foreign professionals will be invited to be members of the jury. The entries, which will not be closed until July 15, promise a great success.

Fort Wayne, Ind.—A. E. Kunderd, the ruffled gladiolus man, has removed here from Kendallville. About a year ago he went into partnership with a Mr. Rice here.

Chrysanthemum

By Arthur Herrington

Formerly president Chrysanthemum Society of America.

The most complete and comprehensive work on the cultivation of the chrysanthemum that has yet been published in America. Its scope and character may be gleaned from the list of contents, which comprises chapters on composts; planting; benches, boxes or pots; general cultural details; crown and terminal buds; feeding, its object and application; care of the buds; exhibition and judging; specimen plants, plants in pots; raising from seed and hybridizing; sports; hardy chrysanthemums; chrysantnemums for south and west; insect pests and diseases; classification and selection of varieties for special purposes; history of the chrysanthemum, etc. The book will be welcomed for the lucid, comprehensive, as well as the practical character of its contents. Handsomely illustrated. 168 pages, 5x7 inches. Price 50c postpaid.

Vegetable Forcing.

BLACK ROT OF TOMATOES.

We have a large house of tomatoes which are badly affected with black spot. The fruit does not seem to have grown at all for the last five weeks. Just before changing color the fruit begins to spot. It is a dry house and we never wet the foliage, but the rain comes in a little and it rained more or less about twenty-four days in June. The disease seemed to start directly after we used fertilizer for them. No mulch has been used, and the ventilators and doors are never closed. D. A. & S.

Judging from your letter, I believe it is black or dry rot, or blossom end rot, as it is usually called, that is causing the trouble. The plants have not had enough water at the roots, or they would not be so badly affected. Give them a good watering and follow it up soon afterward with another, so as to make sure they are wet clear down to the bottom of the benches. They will soon quit rotting if you keep them watered enough. On raised benches, in this hot weather and with the soil full of roots, one watering a day is not enough. Make it your business to see that they are wet enough well down into the soil and, if necessary, water twice a day. It is not advisable to wet the foliage unnecessarily, but it will not hurt them at this time of year, as they dry off quickly when the ventilators are open.

Blossom end rot was formerly thought to be a fungous disease, but has now been found to be a bacterial disease and no spraying will affect it in the least. It is true that fungus (mold) often is found growing on the rotten spots, but only because these rotten spots make a suitable place for that kind of fungus to grow. If a tomato plant is properly supplied with water, it can protect itself against the black spot or blossom end rot.

Pick all affected fruit and clear up the house. For fertilizer to mulch with, use only well rotted manure. Never use fresh manure on tomato plants that are bearing. I prefer a fertilizer made of two parts of bone meal and one part of muriate of potash, dusted over the soil occasionally. H. G.

ASPARAGUS BEETLE.

Please give remedy for the asparagus beetle. J. M.

The simplest remedy for the asparagus beetle, which made its appearance here a few days ago, is spraying with arsenate of lead at the rate of five pounds to fifty gallons of water. Keep the water thoroughly stirred while applying, as the lead will otherwise soon settle at the bottom. If you have a sprayer with an agitator at the bottom of the barrel, you will be all right. Use a Vermorel or Bordeaux nozzle when applying the poison.

Paris green at the rate of one pound to 200 gallons of water will also kill the beetle. This is a somewhat quicker working poison, but does not stick to the foliage like arsenate of lead, a heavy shower of rain washing it away entirely. There is no fear of burning the foliage with arsenate of lead. W. N. C.

THE TITUS GREENHOUSES.

One of the largest crops grown by the gardeners at Irondequoit, N. Y., is cucumbers; that is, of crops under glass. It is said in Irondequoit that a million "cukes" are shipped annually. In the winter they sometimes bring as much as $3 a dozen, but the principal income is, of course, in the spring, when crops are heavy if prices are light. Most of the growers here take much care in sorting and packing, aiming to have every fruit in the box equally good. The best grades are wrapped singly in waxed paper, the name of the grower usually being printed on the wrapper.

Cucumber House of Del Titus, Irondequoit, N. Y.

The accompanying illustration is reproduced from a kodak picture taken in one of the houses of Del Titus, who is one of the best known and most successful of the Irondequoit growers. He has twelve greenhouses, each 30x235. Besides cucumbers, his crops are Boston head lettuce, radishes, cress, mint, beets, tomatoes and parsley. All his houses are equipped with C. W. Skinner's system of watering. His stock all goes to Rochester, to hotels, stores and commission houses, the latter reshipping to New York, Philadelphia, Pittsburg and Buffalo.

All the Irondequoit growers of vegetables under glass have had a prosperous season, with fair crops and good prices, and most of them will make improvements to their establishments this summer. H. R. P.

We were pleased to receive some good orders the first week our advertisement appeared in the Review.—W. G. Moulton & Son, York Village, Maine.

No Grower of Vegetables under glass can afford to do without the Wittbold system of

Watering

—because with it a boy can do as much as two men can do in a whole day with the hose—and do it better.

The system is equally valuable outdoors, and for many other crops besides vegetables—wherever you need water.

Send for our booklet—with testimonials—read and you'll send in your order.

PACIFIC COAST.

SAN FRANCISCO.

The Market.

Business for the last ten days in the month of June was not as good as it was earlier in the same month, and we are now nicely settled in the usual summer quietness. It is apparent that everyone who has any money to spend has left the town for a sojourn at the ocean or the mountains, and the people who compose the town at present are not giving much encouragement to the retailers. With the exception of a fair amount of funeral orders, there is little stirring. Earlier in the month the school commencements and a generous supply of June weddings did much toward reducing the surplus of flowers, but now there is little being used except white stock and only a small percentage of that.

It is hardly worth while to give any prices on roses or carnations. Never in the history of the local market have they been so cheap or of such good quality. The prices on outside flowers have kept at a fair standard, with the possible exception of sweet peas, and would look much better if tabulated and listed than would the finer inside stock. Valley has not been as plentiful as usual with the growers, and there has been a fair demand in consequence. It has been almost impossible to move longiflorums at any price and much complaint is heard from a few growers who are long at present.

Cactus dahlias and gladioli are becoming rather plentiful and thus far have been in good demand. Bride gladioli are out of season again. These were a good paying crop to such growers as had their stocks in early. For the later arrivals the demand was not quite so good, but all were used.

Sweet peas, although the bottom has dropped out of the selling market, are still by far the most called for flowers by the general public, and the chances are that even with the low quotations they will prove to be one of the best money-makers of the year.

Various Notes.

Geo. C. Roeding, of Fresno, Cal., is in town. He has just returned from a visit to the Seattle exposition.

John Gill, of West Berkeley, Cal., has returned from a month's trip through Oregon, Washington and British Columbia.

T. Kamura will erect three rose houses, 25x140 feet, during the summer, on his place at Stege, Cal.

J. G. Lewis has returned from a trip to Los Angeles and San Diego, Cal.

H. Hayashi & Co. have abandoned the old Tyler greenhouses, on Everett street, Alameda, Cal.

P. McDonell, of Alden, Cal., has erected several stores in front of his carnation houses, for renting purposes.

J. J. O'Connor is now located on the corner of Fillmore and Fell streets.

G.

PORTLAND, ORE.

The Market.

Business for the last fortnight has been fair, considering the season. The month of June showed an increase over former years, and was a record breaker in the demand for brides' bouquets, especially in the last few days of the month. White roses were at a premium and we often had to resort to carnations as second choice. Carnations are in ample supply and of good quality, but the prices have taken a tumble. Sweet peas are plentiful, but move slowly. Peonies have about run their race, with deep regret to the florist.

Coreopsis, helianthus, gaillardias and perennial phloxes are plentiful, with demand normal.

Various Notes.

The weather remains cool and dry, which causes much complaint from the growers. Most of the growers are throwing out their carnations and benching young stock, for indoor culture, to prevent a check.

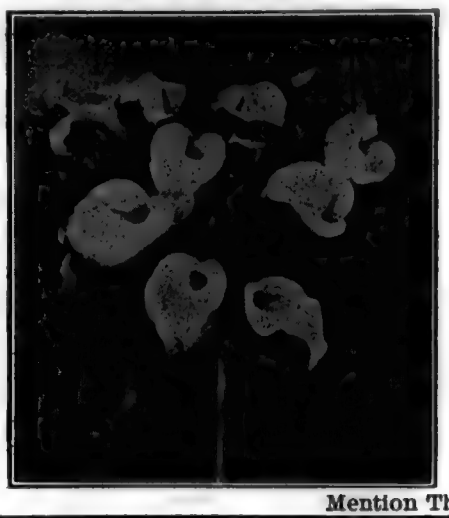
Max Smith says business has so relaxed that he can leave the store to his clerks and turn his attention to the erection of several new houses.

John G. Holden, who recently succeeded Geo. Otten at 613 Washington street, will continue the place as a retail store, in conjunction with landscape gardening.

C. Tonseth spent the last week of June in Seattle and British Columbia, for recreation after a strenuous season.

Frank Luepke, of Houston, Tex., is now located in Vancouver, Wash., and will erect glass necessary to supply the demand.

N. B. Healy, of the Routledge Seed Co., left last week on an extended vacation. The A.-Y.-P. Exposition seems to have been the objective point.



Julius Broetje, of Milwaukee, Ore., is cutting some choice water lilies, which find ready sale.

P. Johnson, of 680 South avenue, who grows carnations exclusively, reports his stock in good condition. He has cleaned out the benches, preparatory to receiving the young stock.

M. M. Darling, of Mountain View Greenhouses, Oregon City, was a week-end caller. He reports business good.

T. E. Miles, of Newberg, Ore., was a recent caller, securing carnation stock to cover shortage.

JOHN H. REILLY, nurseryman at Dansville, N. Y., and Miss Clara A. Foley were married June 30. They made a trip east for their honeymoon.

E. J. KINNEY, the state inspector of nurseries in Kentucky, began his annual rounds July 1, beginning with the inspection of the nursery of H. F. Hillenmeyer, at Lexington.

THE Washington Street Nursery Co. has been incorporated at Geneva, N. Y., with a capital of $5,000. The incorporators are Thomas J. Maney, William H. Witt and Margaret F. Witt, all of Geneva, N. Y.

YOUNG trees and shrubs in nursery rows will not suffer nearly so much from the effects of hot, dry weather if the soil in which they are growing is frequently stirred, and I even think a good stirring of the soil does more good than twice as much time spent with a hose in watering. Plants recently moved will, nevertheless, require watering in extremely dry weather, especially evergreens.

THERE is no other plant that makes such a show when planted for ground cover, in front of or among shrubs, as the English ivy. It will grow almost anywhere, although a shady situation suits it best. If the shoots are pegged down to the soil they will quickly send out roots, and in a little while will cover the soil with a luxuriant growth of soft, shiny shoots and leaves. All that this ivy needs anywhere for protection is a covering of coarse stable manure, put over root and branch and left there until spring.

UNDER the new inspection law, Director H. L. Russell, of the Wisconsin Agricultural Experiment Station, has appointed A. J. Rogers as orchard and nursery inspector. The new law not only requires the certification of stock shipped into the state and the inspection and certification of stock grown in Wisconsin, but requires a license with a fee of $10 for each person selling nursery stock in the state. Firms outside of the state may secure the license upon payment of the fee and by showing that the premises have been inspected by those authorized.

THE STARKS ELECT OFFICERS.

A. E. Senteny has been elected secretary of the Stark Bros. Nurseries and Orchards Co., of Louisiana, Mo., to succeed the late Senator Eugene Stark, who died in St. Louis following an operation June 15.

The Stark Bros. Nurseries and Orchards Co. is a million-dollar corporation and is the largest nursery in the world. This season it sent out from its Missouri headquarters two solid trainloads of fruit trees within one week. It sells trees in every state in the Union and in China, Japan, Australia, Italy and South Africa.

Mr. Senteny was formerly connected with the St. Louis Union Trust Co., of St. Louis, and is a half brother of Thomas L. Anderson, city attorney of St. Louis. He has been connected with Stark Bros. Nurseries and Orchards Co. for several years.

Eugene Duncan was also elected a director of the corporation, to succeed the late Senator Stark in that capacity.

William Stark, who graduated from Cornell University last month, was elected assistant treasurer of the corporation and thus will begin his career with the firm. He is a son of W. P. Stark.

TROUBLES WITH THE PEACH.

[An extract from a paper by L. A. Berckmans, of Augusta, Ga., read at the Rochester meeting of the American Association of Nurserymen.]

Peach Tree Borer.

In the treatment for peach tree borer, the old method of worming the trees during winter has been found ineffective, principally because the worms caused too much damage before being removed. In early spring the earth should be removed from about the body of the tree down to the crown, all gummy exudations scraped off and a careful search made for the borer. For this purpose use a farrier's knife or a tool especially made for scraping peach trees. Apply a wash to a height of eighteen to twenty inches, allowing this to run down well on the roots. As soon as this wash is applied, draw up the earth to the trees, forming a cone about six inches above the level. A second coating of this wash should be applied during August, if the first wash begins to get thin. During the last of October remove the mound from around the trees, thoroughly scrape and clean the bark as in the spring, and give another application of the wash. This is a vigorous treatment, but effective. The wash above mentioned is made as follows: One bushel of quick lime, twenty pounds of sulphur, one gallon of coal tar, fifty gallons of water. Mix the tar and sulphur in ten gallons of water in a barrel; add the lime; keep well stirred. When entirely slaked, dilute to fifty gallons.

Curculio.

This little Turk is the cause of the loss of many carloads of fruit annually, and vigorous warfare should be waged against this pest. Wild plum, crab apple and haw trees are excellent breeding places for this insect, and the careful cultivator will see that such trees are removed from the vicinity of the orchard. It is also well to remove all woods adjoining the orchard. If this is not practicable, the woods should be burned over in the late winter, so as to kill all the undergrowth. All stumps, roots, pieces of bark and other debris in the orchard should be removed, as these afford hibernating places for the curculio.

Another way to destroy the curculio is to jar the trees, catching the insects on cloth-covered frames especially made for the purpose. This jarring should be done early in the morning and late in the afternoon, when the curculio is dormant. The jarring should commence as soon as the fruit is set, and should be continued as long as necessary. Spraying for curculio has not been entirely successful; but if two pounds of arsenate of lead, added to fifty gallons of Bordeau, are used when spraying for brown rot, many

curculios will be destroyed. All fallen fruit should be gathered and burned.

Brown Rot.

The control of brown rot is one of the greatest problems confronting the fruit grower. Many orchardists do not believe in spraying, as the results obtained have been unsatisfactory, and in many instances the results have been fatal to the trees. Not infrequently the spraying is intrusted to the most trifling and careless help on the farm, whereas this should be done by the most careful and intelligent man. The spray should be thoroughly distributed over the tree, but not in such copious showers that the liquid will drip from the leaves or run down the trunk of the tree in streams. Spray properly or omit it altogether.

Another most important feature in reducing the ravages of brown rot and visitations of the curculio is the removal of all fallen fruit. During the harvesting season the orchard should be gone over carefully at least twice a week, and all the fallen fruit gathered up and carried to the dump and burned. After the crop is harvested it is well to go over the orchard and cut out all twigs showing the effects of brown rot. These twigs, like the fruit, should be cremated.

I would state that the following treatment has given good results: First, remove all mummified fruit, should there be any on the tree; second, spray in winter with lime and sulphur; third, when in full bloom, prune out all twigs and blossoms affected with rot; fourth, when fruit is well set, spray with Bordeaux 3-9-50; fifth, ten days later, Bordeaux 3-9-50; sixth, ten days to two weeks later, Bordeaux 3-9-50.

The same spray should be continued at intervals of ten days to two weeks until the fruit begins to ripen. If the Bordeaux is carefully applied there is no material injury to the foliage, but if milk of lime is used three days after an application of Bordeaux, the shot-holing of the foliage will be greatly reduced.

San Jose Scale.

The more orchards, the greater is the number of insects and fungous diseases. It seems that with the advance of civilization both the vegetable and animal kingdoms are being continually attacked by new diseases. When the San Jose scale first appeared upon our shores we thought the fruit industry was doomed, but, thanks to the entomologist, this pest can be kept within bounds. If we spray with lime and sulphur solution in the fall, as soon as the trees have been pruned, the scale can be kept in check; but if the orchard is badly infested, a second spraying in the spring, before the buds begin to swell, will be of untold benefit.

ONE insertion of the advertisement brought me all the orders I need.—GEO. S. WOODRUFF, Independence, Ia.

LOUISVILLE, KY.

The Market.

Business last week was fairly good. Quite a lot of funeral work was turned out and a good many flowers were used. Flowers of all kinds are less plentiful just now, and will be so for a while. Sweet peas are beginning to have short stems, and other early summer flowers are coming to an end.

Various Notes.

William Walker has been at Zion City, Ill., to attend the funeral of his daughter, Mrs. Horace Hullinger, who died July 1. Mrs. Hullinger is survived by five children; her husband died four years ago. Mr. Walker has the sympathy of the trade and of a host of friends.

Jacob Schulz and wife left Saturday, July 3, for their vacation. They will be in the west for some eight weeks.

Mrs. Adam Heitz will leave for Chicago July 8. She will be absent ten days.

F. Walker & Co. have moved into their new store. The store is not completed, but will be in a few days and will be a handsome one. K. R.

NEW ORLEANS.

The members of the Society of Southern Florists and Ornamental Horticulturists are in receipt of a communication from Secretary Paul Abele, stating that the executive committee has called a special meeting to be held in the city, at Milneburg, Thursday, July 15, at 5 p. m., to consider the question of this society disbanding and whatever other business may be brought before it.

Thursday, July 8, at 10 a. m., the entire stock in trade of Jos. A. Schindler & Co., in liquidation, will be sold at public auction by virtue of an order of the court. M. M. L.

THE REVIEW is ahead of any other paper for florists and I cannot do without it.—H. W. WRIGHT, Amarillo, Tex.

PLEASE discontinue our classified advertisement. Last week's issue sold 8,800 plants and as we had only about 20,000 we care to sell, we think we will be liable to dispose of the balance on the orders that will still be coming along. —WARRICK BROS., Washington, Pa.

MILWAUKEE.

The Market.

No material changes have taken place in market conditions. There still is too much stock, with comparatively little demand. All stock is showing the effects of the hot weather, especially carnations, which are rapidly nearing their end.

Various Notes.

At the last club meeting, held July 1, the attendance was light. Walter Hummel, of Wauwatosa, who started in business for himself last year, was elected as a new member. The entertainment committee reported that the club's annual picnic will be held Sunday, August 22, at Crystal Spring park. It proved to be an ideal place last year, consequently it was again secured for this season. Tickets will be ready for distribution the first week in August.

The intense heat of last week was brought to an abrupt end Friday, July 2, by a severe wind and thunder storm, which caused quite a bit of damage, especially to many trees, and incidentally gave some folks the worst scare of their lives. At Manke Bros.' establishment at North Milwaukee lightning struck the lightning rod on the boiler shed and in running along the conductor ripped off shingles and part of the roof board. Five persons were in the shed. They lost no time in getting out (after the danger was past). Directly afterwards lightning struck a tree within a short distance of Nick Zweifel's new residence, also giving them a shock.

Adolph Groth, of North Milwaukee, is busy overhauling his heating system and installing a new Kroeschell boiler, this being the third of its kind which has landed in that burg thus far this year.

Gust Pohl says this was an exceptionally good season for bedding stock and for pansies. He had a big batch of the latter, but is now completely sold out.

The past season must have been a good one for Nick Zweifel, for he is now the possessor of a fine new Kissel automobile.

CARNATIONS

F. Dorner & Sons Co.

La Fayette, Ind.

LEXINGTON, KY.

The Market.

The extreme heat of last week caused society folk to depart rapidly, and in consequence business is practically at a standstill, except some funeral work every now and then. Building and remodeling greenhouses and benches, to better the facilities, are now the most important things on the docket.

Roses and carnations of all kinds are showing the effects of the hot weather, and are becoming harder to move and lower in prices. Some excellent gladioli have been seen in the downtown stores of late and they retail for $1.50 per dozen. Sweet peas are abundant and have slow sales. Some of the florists are cutting excellent snapdragons at present. Other outdoor flowers are abundant. Green goods are in good supply. Chrysanthemums are looking well with all the florists, and the indications are that there will be a good supply of them this year.

Various Notes.

Jas. P. Keller, at the downtown store on Main street, is all smiles. It is a girl this time.

David Honaker has been on the sick list, but is now able to be out again.

The Michler Bros. Co. has been quite busy of late with funeral work.

Prof. E. J. Kinney, who is assistant to Prof. H. Garman, of the Experiment Station, will leave here soon for his annual tour of inspection of the various nurseries of the state. He will begin with the nursery of H. F. Hillenmeyer & Son, of this city, and from here will proceed to the other large nurseries of the state. This tour will occupy about two months, as he must revisit nurseries when necessary and treat diseased trees. Prof. Garman is busy at present preparing samples of injurious weed pests, which are to be exhibited at the Blue Grass and State fairs. Among the more injurious varieties exhibited will be horse nettle, clover dodder, alfalfa dodder, cheat and corn cockles.

From all reports there will be a good delegation from here to the convention.

The leading business houses are closing their stores at 5 p. m. and the florists are thinking of doing likewise.

J. Ferdinand Keller, manager of the J. A. Keller estate, was in Cincinnati, O., recently. Blue Grass.

The ad we had in your paper the last two months certainly kept us what they call "humping," for orders came in every day and they are coming yet. I am certainly more than satisfied.—William Ehmann, Corfu, N. Y.

Ferns in Flats

READY FOR DELIVERY AFTER JULY 15th

Each flat contains 100 clumps of small plants which can be divided in 3 to 5 plants accordingly, all ready for potting.

We can furnish these ferns grown separately, each flat containing any one of the following sorts, ferns all good salable varieties:

Aspidium tsussimense	Pteris cretica magnifica	Pteris serrulata
Cyrtomium falcatum	hastata	serrulata cristata
Pteris adiantoides	Mayi	serrulata variegata
cretica alba lineata	Gilberti	Wimsetti
		Mixed Varieties

Price, $2.00 per flat.

KENTIA, 2¼-inch pots, $9.00 per 100; $75.00 per 1000.
COCOS, 2¼-inch pots, 9.00 per 100; 75.00 per 1000.

Begonia Gloire de Lorraine

We are headquarters for this sterling plant.

This is decidedly one of the most beautiful and profitable plants introduced in many years. It attains a height of 15 to 18 inches, bears pea green foliage, and is fairly smothered with a profusion of soft pink flowers. It is naturally of a compact, bushy form, and blossoms continuously from October to April, making an ideal plant for Christmas decoration. No establishment, large or small, is complete without this Begonia.

From 2½ inch pots, for delivery at once. Doz., $2.00; 100, $15.00; 1000, $140.00.

EVANSVILLE, IND.

The Market.

Business has been good, in spite of the extremely hot weather, for the last two weeks. Roses and carnations are poor and the retailers find it rather difficult to turn out first-class work.

Various Notes.

Ben Kramer reports that business for June was the best he has enjoyed since opening his store.

Carl Ziedler says that business has been excellent with him.

Henry Seymour had a busy week at the end of June and used lots of roses and carnations.

John Elsperman is remodeling his place and is building one new house 20x75, which will be planted to carnations.

Royston & Fenton have cut all their roses back and will run them the third year.

Frank Wells has been engaged by Julius Niednagel & Sons as plantsman. He will grow their mums, etc.

E. L. F.

THE tritomas advertised are all sold and many orders had to be turned down. They came all the way from Massachusetts to Salt Lake City and Texas.—C. S. RIDGWAY, Lumberton, N. J.

PLEASE discontinue our advertisement, as we are completely sold out. This has convinced my proprietor that nobody else can sell as quick as the REVIEW does.—H. J. POTOMKIN, Mgr., Forest City, Ia.

Godfrey Aschmann, the Araucaria King

Is More Active than Ever

Four Houses Filled with the Best. With What? Sure, with ARAUCARIAS, His Specialty

Empty houses! That won't do. What shall I plant? What is the most profitable? Listen to what your neighbor florist has to say. Mr. McGinty to George Know Nothing: "I filled a reasonable portion of my greenhouses last year with Godfrey Aschmann's Araucarias, and I tell you straight out I was only sorry I did not buy more. In two weeks, just when the demand was the biggest, my stock was nearly exhausted. This year I shall be smarter. Last week my order to Aschmann called for just double the amount. I never can lose anything on such an investment as that. Every dollar put in Araucarias yields three to four times the value while we're asleep."

We are one of the largest importers of these well-known and beautiful evergreen decorative plants, the **Araucaria Robusta Compacta, Excelsa Glauca and Excelsa.**

Florists should bear in mind that no home, garden, lawn, etc., is complete without the Araucaria; therefore, if you wish to make money, recommend the Araucaria to your customers. Introduce this noble plant to your trade. We give you a special price, and it will pay you to handle them.

Araucaria Robusta Compacta, Glauca and Excelsa. Our reputation of being one of the largest importers and shippers of this beautiful evergreen decorative plant is so well known, dating far back into the 19th century, that our name, as well as the Araucaria itself, shall never die out, and is still fresh in people's minds, same as when we first started. Why the Araucaria is so popular is because it is an ancient plant, kept by Greeks and Romans as a special favorite in their household, as a good omen.

Araucaria Robusta Compacta and Excelsa Glauca, new importation, 3 tiers, 3-year-old, $1.00, $1.25 and $1.50.

Araucaria Robusta Compacta, specimen plants, 7 to 8-in. pots, 4 to 5 years old, 3, 4 and 5 tiers, 20, 25 and 30 inches high, same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa Glauca. This is a beautiful blue variety, very graceful and beautiful. Specimen plants, 6-in., 7-in., 8-in. pots, 4 and 5 years old, 4, 5 and 6 tiers, 20, 25, 30 and 32 in. high, same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa, 3, 4 and 5 years old, 4, 5, 6 and 7 tiers, 6-in. pots, 20, 25, 30 and 35 in. high, an Elephant for only 75c; a Jumbo for $1.00 and a Holy Terror for $1.25 to $1.50.

Araucaria Excelsa, April (1909) importation, 2 to 3-year-old plants, 5, 5½ to 6-in. pots, 3, 4 and 5 tiers, 12, 14, 16 to 18 in. high, 35c, 40c, 50c, 60c to 75c.

Sago Palm, or Cycas Revoluta, 5½, 6, 7 and 8-in. pots, from 5 to 20 leaves to a plant, 10c per leaf.

Jerusalem Cherries. We offer the best, new improved variety, already laden with large, orange-colored berries, 2½-in. pots, $5.00 per 100.

Begonia Gloire de Lorraine a specialty; also own new improved strain, introduced last Xmas, is still well in the minds of florists. We have both the deep pink and the light pink variety (Lonsdale), 4-in. pots, 30c.

Kentia Belmoreana, 4-in., 18c, 20c to 25c; 6 to 7-in., 6 good leaves, 75c, $1.00, $1.25 to $1.50.

Kentia Forsteriana, 8-in. pots, made up, 1 large, 4 ft. high in center, with 3 small around, price $4.00; single plants, 6 to 7-in. pots, 30, 35, 40 to 48 in. high, $2.00, $2.50 to $3.00.

Areca Lutescens, 4-in., made up of 3 plants, 25c.

Cocos Weddelliana, 3½-in., 18 to 20 in. high, 20c to 25c; 3-in., 15 in. high, 18c.

Cannas, 2½-in., $3.00 per 100.

Geraniums, Cannas and Scarlet Sage, 4-in., $6.00 per 100.

Zinnia Elegans, mostly white, valuable to cut, 2½-in., $5.00 per 100, in bloom.

All goods must travel at purchaser's risk. Cash with order, please.

Please state if you want stock shipped in or out of pots.

DON'T MISS

Looking over our adv. **in April 22 and May 6 issues.**

We offered some great values. **Some fine Rubbers offered at $3.00 and $4.00 doz.**

Our Flowering Begonias are fine.

THE REESER FLORAL CO, Urbana, Ohio

PITTSBURG.

The Market.

The beginning of this month seemed to be the settling down point and things have assumed a regular summer appearance. A good funeral now and then is all that can be hoped for to help matters any. The weather in June was so hot that the fashionable people made haste to get away as soon as the few weddings were over, and trade dropped flat.

The wholesale houses are still receiving good Beauties and lilies, fair roses and carnations, and storage peonies that are really fine. Sweet peas are coming in well, but do not seem to be in demand.

The retail shops are making their decorations with plants and are carrying few flowers, depending on the several wholesalers to take care of any orders they get.

The Fourth of July was quiet as far as flowers were concerned, all of the retail stores closing.

Various Notes.

The Florists' Club will hold its annual basket picnic at Keystone Park, Elfinwild station, on the B. & O. R. R., Thursday, July 15. There will be the usual refreshments, as well as the dancing, ball game and other sports. A good time is assured.

Miss E. B. Maxwell, of Wilkinsburg, will leave in a few days for Butte, Mont., stopping at Yellowstone Park. She will be home September 1, in time to arrange for the fall trade.

A. W. Smith, Jr., who is just recovering from typhoid fever, has gone with his family to Mountain Lake Park, Md., for the summer.

Louis Biehl, an employee of E. C. Ludwig, was married Thursday, July 1, to Miss Goettman. The ceremony took place in the hospital where Mr. Biehl was taken after meeting with an accident that day, while returning in the wagon after arranging the decoration for the wedding at the home of the bride. The accident, while it will confine him to bed a few days, is not serious and he will soon be able to go home to his bride.

John Bader met with an accident which might have proved serious. While attempting to board a crowded car, just as he took hold of the rail the car started with a jerk, throwing him to the ground and bruising him considerably.

B. L. Elliott is trying to figure out a problem. Last Sunday during the storm, while climbing up to fix his awning, he fell on his head and hurt his ankle—not seriously, however. Hoo-Hoo.

ORCHIDS

We have just to hand a fine lot of the following East Indian Orchids, and for which we solicit your orders: **Dendrobium Wardianum, D. crassinode, D. primulinum, D. chrysotoxum and D. Thyrsiflorum,** and others to follow. Write us for prices.

Geraniums Are a Specialty with us.

FOR WINTER BLOOMING. We have an immense stock ready for shipment from 3-inch pots, in a splendid assortment, at $3.00 per 100; $25.00 per 1000. We will send you 1000 in 20 good kinds our selection, for $25.00; good stocky plants from 3-inch pots.

MRS. LAWRENCE is an exceptionally fine variety. Our Geranium Catalogue describes it as follows: This is, without exception the finest Geranium of this color that we have ever seen; clear, healthy foliage; splendid dwarf, compact habit of growth; wonderfully free in flowering; indispensable as a pot plant, being strongly recommended for winter blooming; unsurpassed as a bedder; the color is an artistic shade of bright satiny salmon pink, slightly tinged white; we are satisfied its distinct and graceful form will place it in the front rank of its race. From 2-inch pots, $3.00 per 100; 3-inch, $4.00 per 100.

SEDUMS.

Sedum carneum, strong plants, $1.50 100.
Mountain View Floral Co., Portland, Ore.

SEEDS.

COBURN'S SELECTED PANSY SEED.
BEST MARKET STRAIN GROWN.

Our seed is saved from about 12,000 plants, carefully selected, when in bloom, from the 500,000 we grow for our spring sales.

Each plant is carefully selected, color, size, form and substance being taken into consideration, and the proportion of each color is properly balanced.

As a result of over 25 years' work along these lines, we feel justified in claiming to have the best strain of pansies on the market, and we invite trial and comparison.

Growing our stock in this manner, we have only a limited amount of seed to spare, and in order to distribute as widely as possible, we offer it in packets of 1,000 seeds. Price $1.00 per packet (only one to each customer).
I. E. COBURN, 291 Ferry St., Everett, Mass.

GIANT PANSY SEED from a large early strain, carefully built up from a combination of the seed from the best growers of this country and Germany. This seed will compare favorably with any high priced seed on the market. $4.00 per oz.
C. F. Mahan, R. D. No. 8, Dayton, Ohio.

CYCLAMEN GIGANTEUM PERSICUM SEED, 1909 crop. I have a surplus of a few thousand seed in the following colors: deep crimson, rose, shell, white with carmine eye, and pure white, 60c per 100; $5.00 per 1000 seed.
C. F. Mahan, R. D. No. 8, Dayton, Ohio.

HORTICULTURAL BOOKS

We can supply any of the following books at the prices noted, postpaid, and any other book at publishers' price.

Pronouncing Dictionary.
A list of plant names and the botanical terms most frequently met with in articles on trade topics, with the correct pronunciation for each. **35 cents**

The Florists' Manual.
By WILLIAM SCOTT. Covers the whole field of commercial floriculture. Articles are arranged alphabetically so that reference is quick and easy. It tells you just what you want to know in just the way you want to be told. **$5.00**

Commercial Violet Culture.
By B. T. GALLOWAY. An illustrated, comprehensive and complete treatise on the commercial culture, growing and marketing of violets for profit. Of interest to the amateur as well as the commercial grower. Cloth. 224 pages. **$1.50**

The Propagation of Plants.
By ANDREW S. FULLER. Illustrated with numerous engravings. Describing the process of hybridizing and crossing and also the many different modes by which cultivated plants may be propagated and multiplied. Cloth. 359 pages. **$1.50**

The Rose—Its Cultivation, Varieties, etc.
By H. B. ELLWANGER. Directions for cultivation—for planting, pruning, propagation, the treatment of diseases and insect enemies—particularly valuable for its classification. Alphabetical and descriptive list of nine hundred and fifty-six varieties. Cloth. **$1.25**

Practical Floriculture.
By PETER HENDERSON. An illustrated guide to the successful propagation of florists' plants. A detailed account of the requisites to success and a clear explanation of improved methods. For the amateur and professional florist. 525 pages. Cloth. Postpaid. **$1.50**

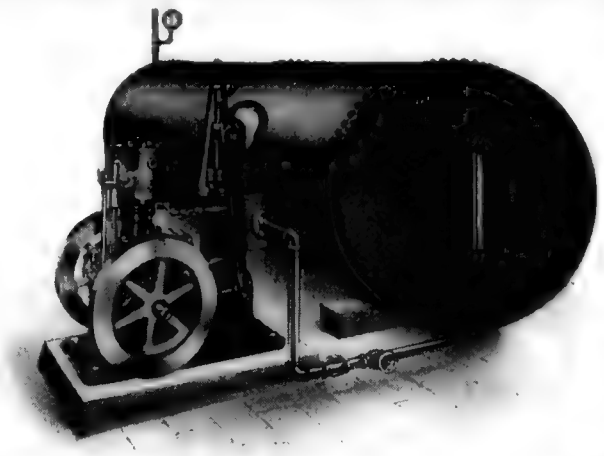
Handbook of Plants and General Horticulture.
By PETER HENDERSON. This new edition comprises about 50 per cent more genera than the former one, and embraces the botanical name, derivation, natural order, etc., together with a short history of the different genera, concise instructions for their propagation and culture, and all the leading local or common English names, together with a comprehensive glossary of botanical and technical terms. Plain instructions are also given for the cultivation of the principal vegetables, fruits and flowers. Cloth. **$3.00**

Handy Manual.
By J. W. JOHNSON. Illustrated with plans for greenhouse heating and ventilating, by a practical steam and hot water engineer of long experience. 125 pages. **$1.00**

The Chrysanthemum.
By ARTHUR HERRINGTON, formerly president of Chrysanthemum Society of America. The most complete and comprehensive work on the cultivation of the chrysanthemum that has yet been published in America. The book will be welcomed for the lucid, comprehensive, as well as the practical character of its contents. Handsomely illustrated. 168 pages, 5x7 inches. **50 cents**

Greenhouse Construction.
By PROF. L. R. TAFT. A complete manual on the building, heating, ventilating and arrangement of greenhouses, and the construction of hotbeds, frames and plant pits. Lucid descriptions and 118 diagrams and illustrations make every detail clear to the amateur and professional gardener and florist. Cloth. 218 pages. **$1.50**

Gardening for Profit.
By PETER HENDERSON. The standard work on market and family gardening. The successful experience of the author for more than thirty years, and his willingness to tell, as he does in this work, the secret of his success for the benefit of others, enables him to give most valuable information. The book is profusely illustrated. 376 pages. Cloth. **$1.50**



The Horticulturist's Rule Book.
By L. H. BAILEY. In no other volume can there be found such a quantity of valuable information in such a handy form for florists, fruit growers, truck gardeners and others. The chapters on insecticides and fungicides, plant diseases, seed tables and planting tables, cements, glues, etc., will all be found exceedingly valuable. Cloth. 302 pages. **75 cents**

Insects and Insecticides.
By CLARENCE M. WEED, D. Sc. A practical manual concerning noxious insects and the methods of preventing their injuries. Profusely illustrated. A generally useful handbook on noxious insects. It covers the whole field of insect pests very thoroughly and is especially valuable for its complete and up-to-date methods of fighting insects. The work is intensely practical. All the important insect pests are described and remedies for them, and methods of preventing their injuries described in detail. Cloth. **$1.50**

BALTIMORE.

The Market.

Ice water, fans and shady spots are now in demand, while anything like extra exertion takes a back seat. Business is quiet. Good flowers are scarce, even the light demand that develops in the morning being more than enough to use up all the choice stock coming in. Carnations are poor. Sweet peas are nearly done. Roses of fair quality are in good supply, especially Cochets. The plant business is about over, but no one is complaining of the business done this year in that line.

The suburbs of the city are now most beautiful, with their flower-decked arbors and porches. Crimson Rambler, Clematis Jackmani, honeysuckle and many other vines and bushes are covered with masses of color. These, together with the porch and window boxes, now at their best, make altogether an earthly paradise and give to the members of the craft a feeling of pride in their profession, as they think that largely through their efforts so much has been added to the pleasure of mankind.

Various Notes.

The Maryland State Horticultural Society will hold its summer meeting at Mountain Lake Park, Md., July 31 and August 1, 2 and 3. The members will travel over the B. & O. R. R. and stop off at Keyser, W. Va., for a few hours.

R. Vincent attended the meeting of the Gardeners' and Florists' Club June 28, in regard to the appointment of a committee to look after the members who are going to attend the florists' convention in Cincinnati. Mr. Vincent wants as large a delegation as possible to go. Q.

Greenhouse Heating.

SUBSCRIBERS are welcome to tell their heating troubles. Give the details fully and reply will be made in this column.

WATER UNDER PRESSURE.

I am moving my greenhouses out about three-quarters of a mile, where I can get better light and more room. Besides moving my present glass, I will build a rose house, 30x150 feet. I will continue to use hot water. Would it be advisable to use water under pressure? I would like the opinion of anyone who has tested hot water under pressure by using a generator or other device for confining the water.

We have an excellent gravity water system, with a reservoir up on the side of a mountain. I can get 100 to 125 pounds of pressure from the city water main. Could I use this pressure instead of a generator, letting the water, as it becomes heated in the pipes, press against the water in the city supply or water main? If there is a pressure of 100 pounds on water when it is cold, how much greater will it be if it is at the point where it is changed into steam? I have a Richardson cast-iron sectional boiler. How much pressure will it stand? Would it be advisable with a cast-iron boiler to have a closed system?

With a 4-inch overhead flow, how many 2-inch returns should I have in a house thirty feet wide and eight feet to the gutter, to maintain a temperature of 60 degrees when the outside temperature is 10 degrees above zero? Also in a carnation house, twenty-three feet wide and seven feet to the gutter, with a 4-inch overhead flow, how many 2-inch returns should I have? There will be concrete walls four feet high, with glass above. The houses are on the ridge and furrow plan. I am located in North Carolina. E. E. B.

I would not use a pressure or closed system, but use an expansion tank, for the following reason: Water circulates at about 180 degrees with the atmospheric pressure of fifteen pounds. Now, if you raise the pressure by a generator or by gravity, you bring your boiling point up in like proportion. If you have a water pressure of 100 pounds the boiling point is pretty high, so that a slight fall in pressure and a rise in temperature would cause the water to move out through the supply pipe into the city water system. Your boiler is liable to make steam and create an enormous pressure, which would break a cast-iron boiler.

You should have fifteen returns in the

30-foot house and eleven in the 23-foot house. G. T. E.

HOUSES AT RIGHT ANGLES.

I am going to erect a greenhouse, 29x111 feet, running north and south, for carnations. It will have cement walls, with three feet of glass in both sides and a glass gable in the south end It will join an east and west house on the north, but will be exposed on both sides and at the south end. It will measure fourteen feet to the ridge. The furnace is under the east and west house, at the south side, and the smokestack is outside of it; consequently the smokestack will be inside of the new house at the north end. I use hot water. Please tell me how best to pipe this new house. My idea is to carry three flow pipes into the new house, then straight up, one to the ridge and one on each side under the purlins to the south end, then down and back to the boiler under the benches. Is 2-inch pipe large enough for the flow pipes? I am located in Kansas. S. M.

Your idea is all right, only keep the flows down as low as possible, as heat rises and pipes above the plants are just heating outdoors, so to speak, as no heat gets to the plants. The 2-inch flows are all right, but I would advise four instead of three. Run 1¼-inch for returns.
G. T. E.

TWO WISCONSIN HOUSES.

We are about to build two connected houses, each 20x93 feet. The side walls will be six feet high and there will be forty-two inches of glass in the south side of the south house. There will be two rows of pipe purlin supports in each of the houses and the side posts will be of pipe. We have on hand about 1,500 feet of 2-inch pipe, which we wish to use. Other necessary pipe we can buy of any size. Please tell us what size of pipe to use and where to place the different runs. We heat with hot water and the houses are to be used for carnations. Z. K. J.

Use 2-inch pipes for heating pipes and 3-inch for the main flow and returns. Run a 3-inch flow pipe up through underground to the far end. Tee off with five pipes on each side and rise to the heating pipes under the benches; bring these

INSTALL A

"DETROIT" Return Trap

AND YOU BUY A GUARANTEE

It takes 90 to 120 lbs. of steam per horse power to operate an ordinary boiler feed pump. "Detroit" Return Traps require only about one-tenth that amount. Why not save the nine-tenths?

Write us size of boiler and number of square feet of glass in your greenhouses, for our proposition.

into a 3-inch return across the end, like the flow, and run back into the boiler. Pipe each house independently and have two extra pipes where there is side glass exposure. The large main across the ends should be open, with a slat wall on top. This will let out the heat across the gable ends. G. T. E.

HEATING PIPES BELOW BENCHES.

How close can hot water pipes be to the bottom of the benches without injury to the plants? L. L. W.

We do not approve of heating pipes below benches for roses, carnations, violets or chrysanthemums. They should always be at the sides. If below the benches, they should be fifteen to eighteen inches below the bottom boards, and even then they cause the soil to dry badly. Of course, for certain crops, such as valley and gardenias, some bottom heat is helpful, as it also is for propagation purposes. C. W.

PERENNIAL PHLOX FROM SEED.

Will seed of hardy phlox, such as Miss Lingard, Mont Blanc, Mrs. Jenkins, Von Lassburg, etc., come true to name if I plant seeds as soon as ripe? J. B. M.

The chances are that seed saved from any of these phloxes would only come partially true, unless the varieties are separated and are protected from winged insects. If you sow seeds from any particular variety, you will probably get a wide range of colors at flowering time, and might occasionally get something new and good.

In addition to seed propagation, phloxes can be increased by division of the roots and from cuttings in either fall or early spring. Miss Lingard, the finest of all hardy phloxes, roots like a willow at either season. As soon as growth starts is the ideal time for propagation. Either a north house or a coldframe will answer. Keep the cuttings moist, and few will fail to root. This method is much to be preferred to seed propagation, on account of its simplicity. All the cuttings will also flower the following August or September. W. N. Craig.

EASTER LILIES.

What variety of Easter lily is best to raise in a general stock, mixed in one house, and how should they be cared for? E. M. D.

Lilium Harrisii and longiflorum, the first named an early blooming form of the latter, are the standard lilies for forcing. If wanted for Easter, which next year comes about the end of March, the bulbs should be potted early in October. Start cool and water sparingly until roots and shoots are growing freely. Either a cellar floor or a frame covered with match-board shutters to exclude sunshine is a suitable place to use for newly potted bulbs. If you want flowers for Christmas, start retarded Harrisii in July or pot the new crop bulbs as soon as received.

A temperature of 55 to 60 degrees at night is suitable for lilies. About forty days will be required to have plants in bloom in such a house after you can count the buds. Green aphis is a great foe of all forcing lilies. Fumigation will easily keep it in control. C. W.

Cut Down Expenses

USE **MOREHEAD**
RETURN STEAM TRAPS

Kalamazoo, Mich., July 7, 1908.

Morehead Mfg. Co., Detroit, Mich.

Dear Sirs:—If your trap cost ten times what you ask for it, it would be cheap when time, labor and cost of repairs are considered, in comparison with the steam pump I had installed before getting your trap.

I cannot praise it too highly and I recommend it to everybody who talks steam.

Yours truly, (Signed) F. W. Meyers, Prop., Riverside Greenhouses.

INDIANAPOLIS.

The Market.

We are in the midst of real summer now. The hot weather has put quite a crimp in business, as might be expected. There were a number of weddings on the last Wednesday of June, also some funeral work earlier in the week, but outside of that there is nothing doing. Roses and carnations are showing the effects of the hot weather. Beauties are holding their own. Shasta daisies, gladioli and Killarney roses are selling well. There are quantities of lilies coming in, but, owing to the scarcity of funeral work, there is little demand. Valley and orchids are having no call.

Various Notes.

Mrs. E. A. Nelson has been seriously ill.

Mr. Roepke, of Roepke & Rieman, has gone to Put in Bay for a week's vacation.

P. A. Miller, with Fleischman's, of Chicago, is spending a few days with his father.

Indianapolis will send quite a delegation to Cincinnati.

Mr. Reising, with L. Baumann & Co., of Chicago, paid us a visit this week. He reports business good.

The State Florists' Association held its regular monthly meeting at the State House last week.

Alfred Pahud will build a residence on his property at the west entrance of Crown Hill.

A. Wiegand & Sons are cutting some fine Easter lilies.

Baur & Smith are busy planting chrysanthemums.

Most of the cut flower stores are closing at noon on Sundays. H. L. W.

My stock is run down lower than ever, sales double those of last year, and the Review gets the credit for the larger share of the increase.—J. L. Moore, Northboro, Mass.

I want to say that your paper covers considerable territory. We received an order from New Zealand for seeds and the firm said they saw our adv. in the Review.—John J. Perry, Mgr. Baltimore Florists' Exchange.

NEW BEDFORD, MASS.

The Market.

There is not much doing here, outside of funeral work. Carnations are quite plentiful as yet, but are getting smaller every week. They retail at 35 cents per dozen. Roses are poor; $1 and $1.50 per dozen, retail, is the price. Outdoor sweet peas are now coming in; 50 cents per hundred blooms is the general price for these, although some are selling at the ridiculously low price of 200 for 25 cents, which hardly pays for the trouble of picking them. There are plenty of outdoor flowers now to cut from. Roses are in full bloom, including Crimson Rambler and Dorothy Perkins.

School graduations and weddings helped somewhat last week.

Various Notes.

Wm. P. Peirce furnished for a wedding last week a decoration which consisted mainly of daisies from the field, and the effect was excellent.

Wm. S. Brown reports orders as coming in fast for his method of tree spraying. Munson, the florist in South Dartmouth, a village about three miles away, is also advertising spraying of trees, etc.

E. Y. Peirce has cut his roses back for next season's crop.

Mrs. H. A. Jahn has all of her dahlias planted out now. She has some choice varieties. W. L.

ROME, N. Y.

The Elm street greenhouses, built by ex-Alderman Edward J. Byam, and conducted by him the last eight years, have been leased by Mr. Byam to Edward H. Kipp and William H. Edwards, of Ossining, for a term of five years. Mr. Kipp has been in the employ of the F. R. & P. M. Pierson and Briarcliff Greenhouses as superintendent, and Mr. Edwards is the teller of the Ossining National bank. Mr. Kipp has resigned his position and arrived in Rome July 1, and took possession of the business. Mr. Edwards will arrive in Rome about August 1. Mr. Byam retains possession of his dwelling house and stables until September 1, when the new proprietors will occupy same. Mr. Byam intends to retain his residence in Rome, but does not contemplate engaging in active business for a year.

THE RETAIL FLORIST.....

VALUE OF STEMS AND FOLIAGE.

The Flowers' Natural Setting.

No small share of the beauty of a flower is due to the mounting and poise supplied by the stem and foliage. Who cares for a rose detached from the stem and leaves? The public is fast learning that a flower arrangement of any consequence must, in the scheme of the decoration, display the flowers with a reasonable amount of their natural stem. A spray at its best will show a stem long enough to balance its size, in about the proportion found in the choicest specimen flowers used in it.

How often a casket bunch is not considered finished until after the stems have been bobtailed and evened off neatly! Not only should the stem of the spray be left long, but it should consist of a number of stems of unequal length. Even if no other purpose is served, every spray should have a few long-stemmed specimens to give it the desirable style. If short-stemmed stock must be used, give the stem of the spray artificial length by fastening left-over stems in the tie, and placing them so as to give them the appearance of belonging to the flowers.

The average length of stem for a spray seems in general to be about one-third below the tie. Different flowers and different styles of sprays can be judged according to requirements, and stems of a good proportion kept or added.

Stem and Foliage in the Tie.

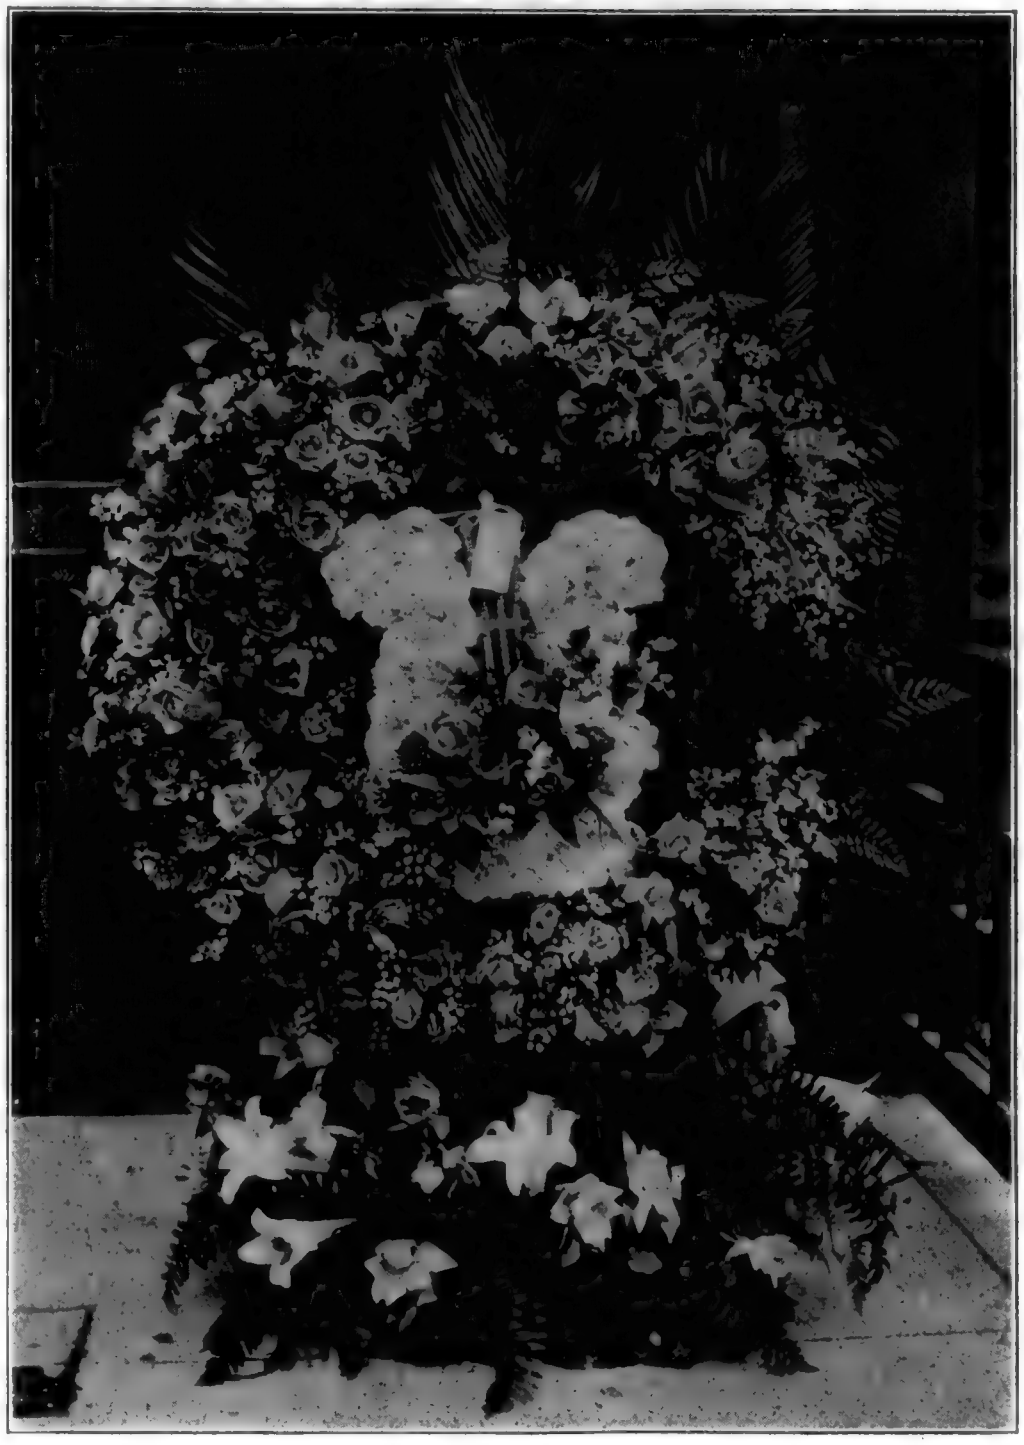
Stems and foliage can be employed occasionally as a tie, with fine effect—sometimes actually tied, when their texture is tough enough; at other times in imitation of a bow tie, as with wheat; then, again, like a wisp. At other times an unusually fine spray of foliage may be caught in with the fabric tie and allowed its liberty to stand up, out or to one side.

Do not try to cover thorny rose stems, unless the foliage be poor. The spines and stems, with their fine touches of color, serve to blend the colors of the flower with the color of the foliage, and are also happy mediums of decorative form as well as color. Add touches of foreign foliage sparingly in the spray, but be still more stingy with it over the stem of the spray.

Like tallness and slenderness in the human race, long stems add style and grace. They are never perfectly rigid and straight, even a calla or a gladiolus stem having perceptible curves. A spray or piece which has as much character and design as a gladiolus stalk may be considered a high grade of work.

The Gladiolus as a Model.

A little analysis of the lines composing the scheme of design in the gladiolus stalk is fascinating and profitable. Take one and sketch it from nature. There is a main stalk, with the leaves branching out on either side and above, the flowers with their outline conforming to the general plan and all finding their source from the parent stem. All the lines forming the outline of the foliage and flowers are gracefully curved into the more dignified, long sweep of the main stalk. The whole forms a fine design for a spray. After sketching the outline, take an observation trip around the coast line of the sketch and see the deep indentations and sharp points which the tips of leaves and flowers form. Learn from this something about the lines to follow in planning a spray. Let there be deep cuts into the body of the spray and there will be no danger of the piece being a solid oval.



A Justifiable Criticism.

When it comes to the question of the decorative value of stems on formal pieces, the same principles apply, and the violation of such principles here will account largely for the objection made to these designs by intelligent amateurs and buyers. There is no reason why this criticism should not be made the most of. Have some stem ornamentation on pieces.

Here is an open field for ambitious designers. Not only may such pleasing use be made of the part of the stem which is above the point of insertion into the moss, but other parts of the stem may be inserted below in any style that fancy may suggest, as a tie, or as extra length. Good use may be made, also, of shoots of new growth, buds, unfurled fern fronds, seed pods, and all such ornamental schemes which accompany the flowers as their natural setting. Rose stalks from which the petals have fallen, leaving the stamens exposed, are very decorative and make a charming addition to any arrangement of roses.

When Stems Are Too Long.

When the stems of the flowers are too long for the design to be used, pin them down near the center of the stems, train the flower ends to follow the design lines and keep within its outlines, and allow the lower ends of the stems to flare out

THE RETAIL FLORIST.....

VALUE OF STEMS AND FOLIAGE.

The Flowers' Natural Setting.

No small share of the beauty of a flower is due to the mounting and poise supplied by the stem and foliage. Who cares for a rose detached from the stem and leaves? The public is fast learning that a flower arrangement of any consequence must, in the scheme of the decoration, display the flowers with a reasonable amount of their natural stem. A spray at its best will show a stem long enough to balance its size, in about the proportion found in the choicest specimen flowers used in it.

How often a casket bunch is not considered finished until after the stems have been bobtailed and evened off neatly! Not only should the stem of the spray be left long, but it should consist of a number of stems of unequal length. Even if no other purpose is served, every spray should have a few long-stemmed specimens to give it the desirable style. If short-stemmed stock must be used, give the stem of the spray artificial length by fastening left-over stems in the tie, and placing them so as to give them the appearance of belonging to the flowers.

The average length of stem for a spray seems in general to be about one-third below the tie. Different flowers and different styles of sprays can be judged according to requirements, and stems of a good proportion kept or added.

Stem and Foliage in the Tie.

Stems and foliage can be employed occasionally as a tie, with fine effect—sometimes actually tied, when their texture is tough enough; at other times in imitation of a bow tie, as with wheat; then, again, like a wisp. At other times an unusually fine spray of foliage may be caught in with the fabric tie and allowed its liberty to stand up, out or to one side.

Do not try to cover thorny rose stems, unless the foliage be poor. The spines and stems, with their fine touches of color, serve to blend the colors of the flower with the color of the foliage, and are also happy mediums of decorative form as well as color. Add touches of foreign foliage sparingly in the spray, but be still more stingy with it over the stem of the spray.

Like tallness and slenderness in the human race, long stems add style and grace. They are never perfectly rigid and straight, even a calla or a gladiolus stem having perceptible curves. A spray or piece which has as much character and design as a gladiolus stalk may be considered a high grade of work.

The Gladiolus as a Model.

A little analysis of the lines composing the scheme of design in the gladiolus stalk is fascinating and profitable. Take one and sketch it from nature. There is a main stalk, with the leaves branching out on either side and above, the flowers with their outline conforming to the general plan and all finding their source from the parent stem. All the lines forming the outline of the foliage and flowers are gracefully curved into the more dignified, long sweep of the main stalk. The whole forms a fine design for a spray. After sketching the outline, take an observation trip around the coast line of the sketch and see the deep indentations and sharp points which the tips of leaves and flowers form. Learn from this something about the lines to follow in planning a spray. Let there be deep cuts into the body of the spray and there will be no danger of the piece being a solid oval.

A Justifiable Criticism.

When it comes to the question of the decorative value of stems on formal pieces, the same principles apply, and the violation of such principles here will account largely for the objection made to these designs by intelligent amateurs and buyers. There is no reason why this criticism should not be made the most of. Have some stem ornamentation on pieces.

Here is an open field for ambitious designers. Not only may such pleasing use be made of the part of the stem which is above the point of insertion into the moss, but other parts of the stem may be inserted below in any style that fancy may suggest, as a tie, or as extra length. Good use may be made, also, of shoots of new growth, buds, unfurled fern fronds, seed pods, and all such ornamental schemes which accompany the flowers as their natural setting. Rose stalks from which the petals have fallen, leaving the stamens exposed, are very decorative and make a charming addition to any arrangement of roses.

When Stems Are Too Long.

When the stems of the flowers are too long for the design to be used, pin them down near the center of the stems, train the flower ends to follow the design lines and keep within its outlines, and allow the lower ends of the stems to flare out

Broken Wreath Made by Mrs. Dietschy, Alton, Ill.

as they will. Then find somebody who will call that a "stiff" design. Use a quantity of stems as a foundation of a piece, to do away with the flat appearance, and throw the flowers up to give them a spring and a swing.

The cascade wreath is a fine example of the artistic value of stem and foliage in the use of valley, violets, small roses and other similar flowers for the shower.

Imitating Plant Outlines.

In designing a spray of flowers, a plant form is a good starter. See how the lines come together below and how they diverge in easy lines, whether they reach out in parallel lines or branch. Get the architectural lines of a plant and you have an ideal plan for a group of flowers about the handle of a basket or for a table centerpiece. If such work calls forth the comment, "Just as though they were growing," it shows a far higher sense of appreciation than "Beautiful!" "Exquisite!" or any other extravagant terms of which the dictionary boasts.

One argument which might be raised in objection to this method of designing is that copying the habit of growth of a plant might produce a fixed form of design which in time would amount to conventionalizing. If too narrowly practiced, yes; particularly and discriminately, no, for plants of the same species may be produced in dozens and thousands of varieties, distinguished by fine touches and styles that are all their own as individuals.

Delicate Color Effects.

In addition to all this value in form of stem and foliage, there is the color estimate to be placed upon stem and foliage and all the variations and transformations in which they mask themselves. Take cinerarias, for example. Each variety shows a color scheme throughout the plant. A tint of the same color prevailing in the flower is seen on the upper surface of the leaf and stem, and much more plainly on the under side of the leaf. Different varieties of roses have the green of the foliage tinted with the master color of the flower. How much more purple can be seen in the American Beauty foliage than in the Bridesmaid! And how easily the yellow principle may be traced through the foliage and flower of the Bridesmaid which does not appear in the Richmond, and so on, to the weariness of the flesh and the bill for the midnight oil! Gertrude Blair.

Titusville, Pa. — Raymond Hemphill reports business in his section has been fine.

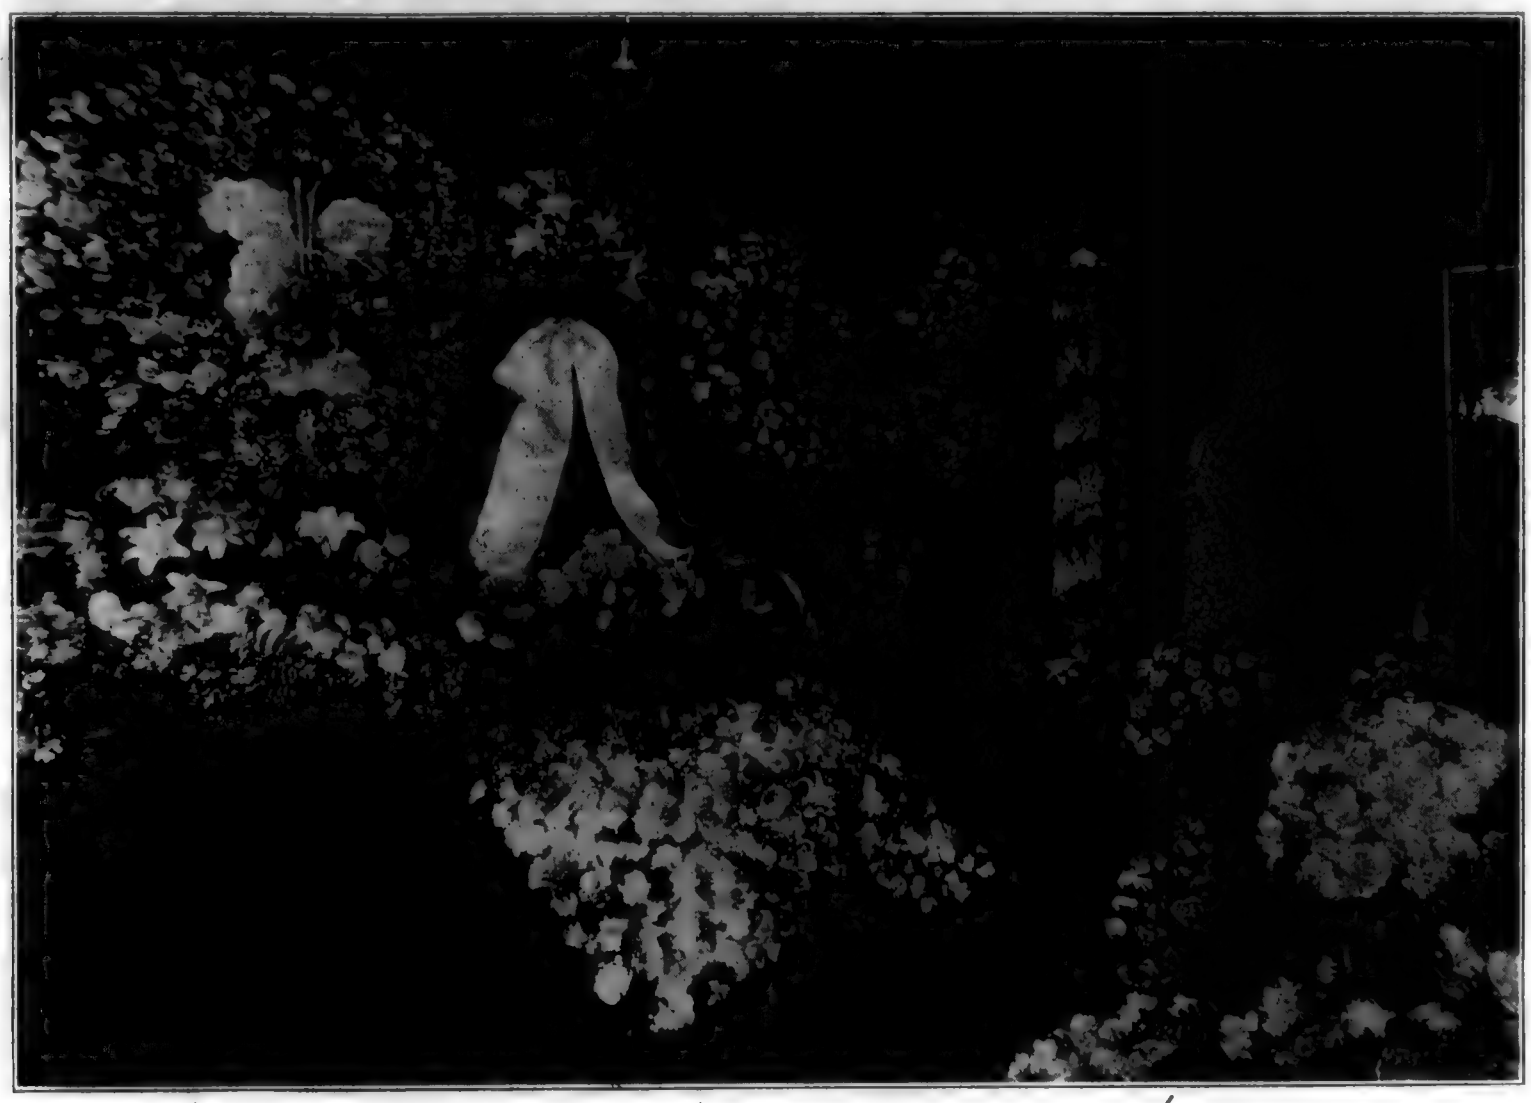
Column Made at J. F. Ammann's Store at Alton, Ill.

A RUN OF FUNERAL WORK.

The city of Alton, Ill., suspended business one day recently for the funeral of its leading manufacturer. In an event of this kind the local florist usually finds himself with a large volume of work of a character decidedly out of the ordinary, and such was the case in this instance. The deceased was William Elliott Smith, president of the Illinois Glass Co., one of the largest bottle works in this country. Mr. Smith died in Italy and his body was brought home for burial. It was the largest funeral ever held in Alton and it brought J. F. Ammann's branch store the biggest run of funeral work known there in many a day. The accompanying illustrations show a portion of the work made up by Mr. Ammann's manager, Mrs. Dietschy. The larger picture shows a number of the principal designs in the store before delivery. The smaller pictures are from photographs of six-foot designs, one a column and the other a broken wreath with a lyre in the center.

PRIZES FOR CUSTOMERS.

One way in which retail florists "raise the wind" is to give a prize coupon with every sale, or in some cases a coupon is given entitling the holder to chances in proportion to the amount of the purchase. Then, once a month a drawing is held and the prize winners bulletined in the window. This plan would not at all appeal to fashionable folk, but it has been found to work excellently in the stores catering to the middle classes, and it is a specially good feature for the summer months.



The usual practice is to offer plants as prizes, either palms, ferns or rubber plants. Numbered coupons are issued with each sale, either one ticket with each purchase or one ticket for each 25 cents' worth purchased. Many of the modern cash registers issue a numbered coupon receipt with each purchase, which can be employed in the prize contest where only one coupon is to be issued with each sale. Those doing a neighborhood business, who have tried this plan, with drawings held the last day of the month, have found that next day most of their customers find time to take a look at the window to see the bulletin giving the numbers of the winning tickets. It has been found better to have quite a number of prizes rather than a few of larger value.

DECORATING AUTOMOBILES.

Big Parade in Washington.

Gude Bros. Co., Washington, D. C., send the Review a set of photographs of splendidly decorated automobiles, and Wm. F. Gude writes about them as follows:

"This floral parade was held July 5 in the national capital, under the most adverse circumstances leading up to it, and then proved a howling success from every point of view. There were some 200 automobiles in line, decorated, and probably 100,000 people witnessed the parade. Many of these were representative men from every state in the Union, from the fact that Congress is in session, which keeps many hundreds of families here, in addition to the congressmen and senators. Our sending out these photographs is to encourage the other florists and have other people in other cities do likewise. We feel that this function, having been held at the national capital,

A Portion of the Work Made at J. F. Ammann's Alton Store for a Recent Funeral.

is naturally of national interest to the florists throughout the country. Other florists besides ourselves also decorated prize-winning automobiles; namely: Blackistone, Marche, Shaffer, and, we believe, one or two others.

"I want to say that viewing the parade from the judges' stand on Riverside drive, where it could be seen going and coming for a distance of two miles, just about sunset, with the Potomac river on two sides lined with green trees and several bands of music playing, was one of the grandest scenes that it has ever been my pleasure to witness in this or any other country.

"I might further state that the judges for this occasion were Mrs. Senator Scott, of West Virginia, one of the leading society ladies; Major Judson, U. S. A., engineer of the District of Columbia, and three of the highest class artists. The whole parade was on a grand scale, well worthy of all the publicity that can be given it."

Mr. Gude, as is well known to all who attend the meetings of our national trade societies, possesses a splendid voice, and was called upon to read the Declaration of Independence at the morning celebration in Washington, July 5.

The Washington daily papers made a great special feature of the automobile parade and the Post devoted a whole page to illustrations of the prize vehicles. In the class for commercial cars the delivery motor wagon of Gude Bros. Co. took first prize, a silver cup valued at $100. It was trimmed in white and green cloth with roses. In the class for gasoline and steam cars the entry of Arthur Moses, decorated by Gude, took first, a canopied car with a large basket of pink flowers on top. A special prize was won by Ernest Loeffler, decorated by Gude Bros., with American flags only. The sweepstakes prize was awarded to a car representing a swan boat and was decorated by Z. D. Blackistone. A special prize was awarded to Mr. Blackistone for the work. His customer received a silver loving cup valued at $300, on which the committee caused to be engraved a picture of the winning decorated car.

This parade of decorated automobiles undoubtedly eclipsed anything of similar character ever held in this country and brought to the florists no small amount of business as well as valuable advertising.

SALT IN MANURE.

Referring to the article in the REVIEW of June 24, by R. E. Shuphelt, under the head of "Violets—Seasonable Advice," can you tell me how much salt he uses in his manure pile, and if it is safe to use it for any crop? Also if slaked lime is good? J. W. R.

I have been planning to say more about salt, and J. W. R.'s question brings it up at once.

I have my doubts if many that read this article will follow out my suggestions, and I doubt this from past experience, as nearly everybody is either a little doubtful as to its value, or else thinks it too much trouble and grows careless, even if he starts out to do this. I paid $5 for this knowledge and a small book of formulas for mixing fertilizers, a number of years ago, and really it is worth many times the price, if used regularly and with judgment.

If you keep horses and cows, the proper thing is to keep a good supply of salt in the stables. The cheapest kind of salt that you can buy is just as good as any, and in many places one can buy factory sweepings. Keep at least a barrelful where it is convenient of access when cleaning the stables, and before cleaning these scatter a good handful on the manure back of each animal. In this way it gets pretty thoroughly mixed, and of course this is what you are after. The more bedding in the manure, the more salt you can use. I have found that, as a general thing, people are inclined to use too small a quantity rather than too much, as they are afraid of it, but if you keep experimenting, one or two seasons' trial will teach you the proper quantity to use. One can use much more on horse manure than on cow manure, as it heats so much more, and if you use enough it will entirely prevent its burning and you will not waste or lose half of it by "firefang."

Where this method is followed up regularly and systematically, you will find your manure pile in pretty good condition when you are ready to draw it out, but if conditions are such that you can turn it over occasionally, so much the better, and you will generally want to scatter some more salt over the pile at such times, especially in spots where you can see that there is not a sufficient quantity. If your stables are so arranged that you collect your liquid manure, you will find it well to use all the manure will hold each time you turn it over.

as they will. Then find somebody who will call that a "stiff" design. Use a quantity of stems as a foundation of a piece, to do away with the flat appearance, and throw the flowers up to give them a spring and a swing.

The cascade wreath is a fine example of the artistic value of stem and foliage in the use of valley, violets, small roses and other similar flowers for the shower.

Imitating Plant Outlines.

In designing a spray of flowers, a plant form is a good starter. See how the lines come together below and how they diverge in easy lines, whether they reach out in parallel lines or branch. This parade of decorated automobiles undoubtedly eclipsed anything of similar character ever held in this country and brought to the florists no small amount of business as well as valuable advertising.

SALT IN MANURE.

Referring to the article in the REVIEW of June 24, by R. E. Shuphelt, under the head of "Violets—Seasonable Advice," can you tell me how much salt he uses in his manure pile, and if it is safe to use it for any crop? Also if slaked lime is good? J. W. R.

I have been planning to say more about salt, and J. W. R.'s question brings it up at once.

I have my doubts if many that read this article will follow out my suggestions, and I doubt this from past experience, as nearly everybody is either a little doubtful as to its value, or else thinks it too much trouble and grows careless, even if he starts out to do this. I paid $5 for this knowledge and a small book of formulas for mixing fertilizers, a number of years ago, and really it is worth many times the price, if used regularly and with judgment.

If you keep horses and cows, the proper thing is to keep a good supply of salt in the stables. The cheapest kind of salt that you can buy is just as good as any, and in many places one can buy factory sweepings. Keep at least a barrelful where it is convenient of access when cleaning the stables, and before cleaning these scatter a good handful on the manure back of each animal. In this way it gets pretty thoroughly mixed, and of course this is what you are after. The more bedding in the manure, the more salt you can use. I have found that, as a general thing, people are inclined to use too small a quantity rather than too much, as they are afraid of it, but if you keep experimenting, one or two seasons' trial will teach you the proper quantity to use. One can use much more on horse manure than on cow manure, as it heats so much more, and if you use enough it will entirely prevent its burning and you will not waste or lose half of it by "firefang."

Where this method is followed up regularly and systematically, you will find your manure pile in pretty good condition when you are ready to draw it out, but if conditions are such that you can turn it over occasionally, so much the better, and you will generally want to scatter some more salt over the pile at such times, especially in spots where you can see that there is not a sufficient quantity. If your stables are so arranged that you collect your liquid manure, you will find it well to use all the manure will hold each time you turn it over.

As to the salt harming any crop, I suppose one could use it too strong, although I have yet to see an instance of it, and I have used it for a good many years. I do not think one would be apt to use an excess, as the most of land will stand more salt than it gets.

Right here happens an odd corroboration of what I have been recommending. A man (whose name I do not know) has just been in to buy some celery plants, and he said that I advised him a year ago to use salt, telling him quite fully about it, and that he had been doing so ever since with much success. He said he would not be without it. I at once asked him how much he had been troubled with the white grubs and cutworms, as they are so bad this year, and he said he had only lost five strawberry plants out of all this season's planting, and he grows this in quantity, as he is growing small fruits and garden truck for a business. This is practically no loss at all, in the hundreds of plants he sets out.

As to the lime, lacking a chemical examination of your soil, I should advise you to try some and note results. The most of soils will use some to good advantage, especially if a little heavy and wet or if inclined to be sour or to mold or get mossy if not turned over often. Of course you do not want to use such soil anyway, if anything better can possibly be secured, but if you have some such soil you can frequently put it in good shape in two or three years by working it over as often as possible, adding lime, charcoal dust, salted manure, etc., and leaving it well exposed to the winter frosts.

But, to recapitulate, use salt and use it liberally, in the stable when it is cleaned, if possible, but if you cannot do this, as soon after as possible, as it is much better used at a late date than not at all. The more promptly it can be used, the better the results, especially, as I said before, in preventing horse manure from burning and so losing the most of its value. Brine from pork barrels and from ice cream freezers, etc., is excellent, and it is well to procure it whenever one can do so conveniently and reasonably.

R. E. Shuphelt.

TIME TO FLOWER BULBS.

Will you kindly tell us how many weeks it takes to force cold storage valley and giganteum lilies and French and Dutch trumpet narcissi? We live in the state of South Carolina. B. F. C.

Cold storage lily of the valley requires from three to four weeks to flower, according to temperature and other conditions. It is an advantage not to force it too hard, in order to give the flowers more substance and secure some foliage with it. Four weeks is ample time to allow.

Lilium longiflorum giganteum takes a little longer to force into flower than the ordinary longiflorum or the variety multiflorum. Much, of course, depends on the time you want to start your bulbs. Potted in the middle of July, you should have them for Thanksgiving, although a few may come later. For Easter flowering the bulbs should be potted not less than twenty weeks, six weeks of this being allowed from the time buds are showing until the flowers open in an average temperature of 60 degrees.

French Trumpet Major narcissus, if placed in flats as soon as received, usually in early August, can be flowered by Christmas, but is better in January. Dutch Trumpet Majors arrive later, and cannot be forced as early as the French bulbs. Started in September, they will flower from the third week in January onwards. Each of these narcissi should be allowed from sixteen to twenty weeks from starting to flowering, according to the temperature given. In your state the shorter period should suffice. C. W.

Leatherman's Semi-double Shasta Daisy.

A SEMI-DOUBLE SHASTA DAISY.

At this time, when the Shasta daisy is so fine and is selling so well in flower stores, it will be of interest to note that an Indiana grower, D. W. Leatherman, of Anderson, has what he calls a double form. This he has named the Ostrich Plume Shasta, "on account of its graceful appearance and because it closely resembles that grand aster, Ostrich Plume." Mr. Leatherman thinks he has one of the most useful novelties the hardy perennial class has produced in recent years. This plant was found in the autumn of 1907, and in June of 1908 produced fourteen fine flowers on strong stems twenty-four to thirty inches long. Quite a few seeds were harvested in 1908 and the plants are now in bloom, but they all revert to the original type of Shasta. The illustration is a poor one, the photograph lacking detail, but serves to give an idea of the style of flower. The center is rich gold. The petals are narrow and fold over the center gracefully.

USEFUL HERBACEOUS PLANTS.

Alstroemeria Aurantiaca.

Alstrœmeria aurantiaca is one of the most useful herbaceous perennials, either for massing effects or cutting, flowering in early July. The alstrœmerias or Peruvian lilies, as they are commonly called, are tuberous rooted subjects, belonging to the family amaryllidaceæ and, being looked upon as somewhat tender, are not much seen in the hardy border. There is no special difficulty in cultivating them successfully, if a warm, sloping bank or border is chosen for them, and a good coating of leaves or straw furnished when the ground freezes. On perfectly level ground, unless sandy and well drained, they are liable to rot.

Propagation may be effected either by root division in September or early October, or from seed, which should be started under glass in early spring, transferred to flats and later to the open ground. The plants do not like much root disturbance and it takes a year to properly establish them. A. aurantiaca carries strong spikes, two to three feet high, of showy, yellow, lily-like flowers, which are tipped green with brown spots. Fifteen to thirty flowers are carried on each umbel. These alstrœmerias are splendid for cutting and last for several days in water. A. Chiliensis is also grown to some extent in America. Its flowers vary in color from rosy white to orange red, and like A. aurantiaca, it blooms practically the whole summer.

Aster Sub-coeruleus.

Aster sub-cœruleus, the early flowering aster, has only been in commerce a few seasons and has already won a host of admirers. It is distinct in habit from the bulk of the aster family, throwing up a quantity of leafless flower stalks in June and early July, which each carry a single large violet blue flower with a yellow center. The flowers average three inches in diameter and for cutting are excellent. Flowering, as it does, so much earlier than nearly all other members of the family, it is specially useful. Propagation may be effected either by root division or seed. The latter germinates readily and if started now, nice flowering plants can be had for next season. The flower stalks average eighteen to twenty-four inches in height.

View in the New Conservatory of J. G. Crozer, Cedar Rapids, Iowa.

Delphinium Formosum Coelestinum.

Delphinium formosum cœlestinum, the light blue, hardy larkspur, remains deservedly popular, and at the present time makes one of the most beautiful mass effects in the hardy herbaceous garden. A much branched form has lately appeared, which is quite an acquisition. We find that the best time to plant all the delphiniums is in October. The ground cannot be too liberally prepared, but fresh manure should not come in contact with the roots. There is still ample time to sow seed, the best method of propagation, and get nice plants for another season.

A beautiful effect can be obtained by planting masses of this delphinium rather thinly, then scattering a quantity of Lilium candidum around and through them. The two flower together and are just at their best in Massachusetts July 4, making the prettiest imaginable color contrast. The true, broad-petaled candidum lilies should be used and planted not later than the first week in September.

Hemerocallis Middendorfii.

All the hemerocallises, or day lilies, are valuable for massing effects. The old H. fulva, or tawny day lily, is the best known of the family. This in many parts of New England has escaped from cultivation and masses of it on roadsides and in fields are to be met with on every hand. H. Middendorfii is a less robust grower than some others and is an early bloomer, being at its best this season about the middle of June. The flowers are a handsome deep yellow and are borne on spikes eighteen inches high. Propagation by root division in fall is easy.

Of the other hemerocallises, H. Dumortierii, flowering with Middendorfii, is a decided acquisition. The exterior of the flowers is deep orange, the inside soft yellow. H. flava is too well known to call for any mention. H. Thunbergii is the most persistent flowering of the family, lasting through July and August. The stalks are well adapted for cutting. H. aurantiaca major is less hardy than other varieties and needs well drained ground and good winter protection. It has large flowers, averaging five inches across, deep orange in color, which appear about the middle of July. The American hybrid, Florham, originating with A. Herrington, at Madison, N. J., has large, sweet, golden yellow flowers and is an excellent border plant.

Dianthus Barbatus Pink Beauty.

Dianthus barbatus Pink Beauty is a pretty pink form of sweet william, originating some years ago with Sutton & Sons, of Reading, England. It has become quite popular in New England for borders and early summer bedding, the color being taking. The sweet williams, while showy, are somewhat stiff and, with the exception of Pink Beauty, never have proved popular with ladies. Seed of this variety is offered by a number of American seed houses and if sown at once nice flowering plants may be had for next season. We find it comes perfectly true from seed. Planting in the fall gives best results, covering the plants lightly with leaves to prevent scorching of the foliage.

Iris Anglica Mont Blanc.

All the iris family are indispensable in the herbaceous garden. The bulbous varieties for some reason are less grown than they should be. Nothing can be finer than masses of the Spanish and English iris and they are just as hardy as the German or Japanese sections in any well drained land. The Spanish and English sections are better for cutting than any others. As market flowers the former have attained considerable popularity, but growers seem to have almost entirely neglected the English section, which outdoors immediately follow them in flowering. The variety Mont Blanc, with pure white flowers, somewhat larger than those produced on the Spanish iris and rather stouter stems, is the best variety for florists to grow. With a light coating of leaves, these bulbs are perfectly hardy. Planting should be delayed until the early part of November. W. N. C.

STOCK IN A RETAIL PLACE.

The accompanying illustration is from a photograph taken in the new conservatory of John G. Crozer, at Cedar Rapids, Ia., and will be of interest as showing what a great variety of stock a retailer in a small city is compelled to carry. Mr. Crozer has found that his increased facilities have brought him a prompt increase in business. He has had a good trade all spring and the summer demand is holding up better than usual.

KEARNEY, NEB.—H. C. Green is proprietor of the Green Seed and Plant Co., successors to the Kearney Floral and Seed Co.

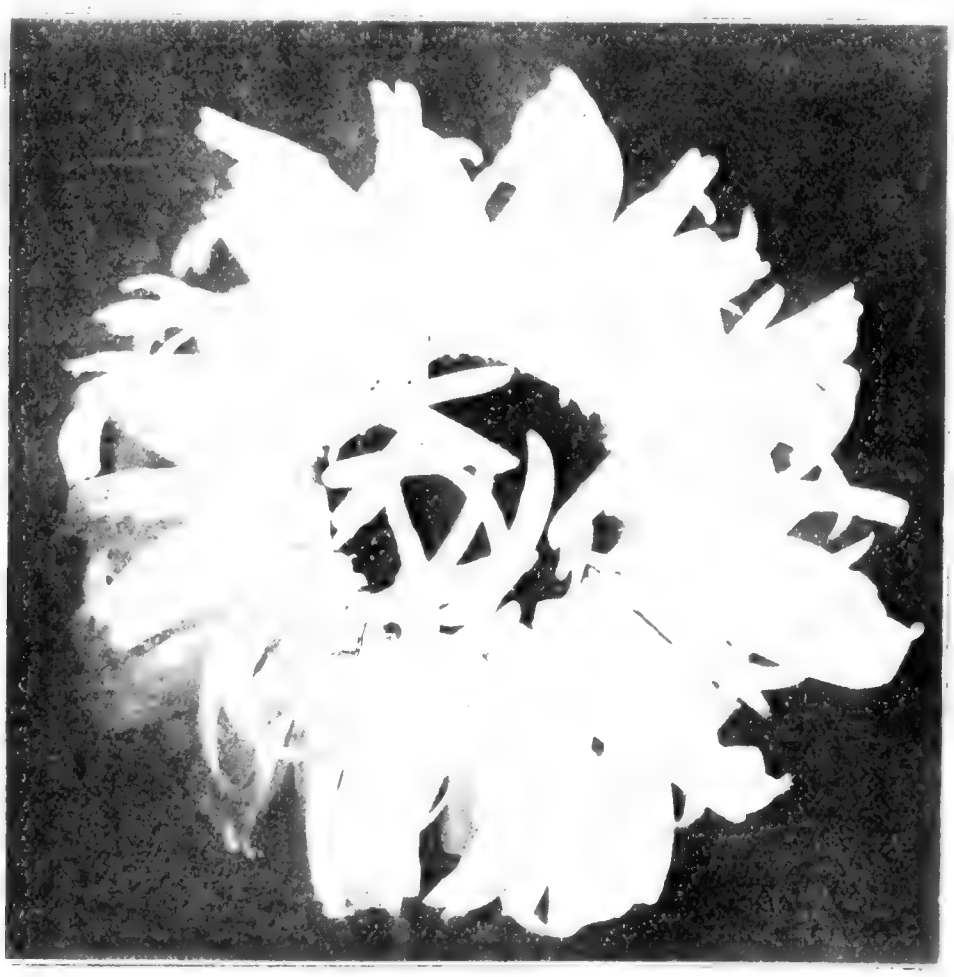
As to the salt harming any crop, I suppose one could use it too strong, although I have yet to see an instance of it, and I have used it for a good many years. I do not think one would be apt to use an excess, as the most of land will stand more salt than it gets.

Right here happens an odd corroboration of what I have been recommending. A man (whose name I do not know) has just been in to buy some celery plants, and he said that I advised him a year ago to use salt, telling him quite fully about it, and that he had been doing so ever since with much success. He said he would not be without it. I at once asked him how much he had been troubled with the white grubs and cutworms, as they are so bad this year, and he said he had only lost five strawberry plants out of all this season's planting, and he grows this in quantity, as he is growing small fruits and garden truck for a business. This is practically no loss at all, in the hundreds of plants he sets out.

As to the lime, lacking a chemical examination of your soil, I should advise you to try some and note results. The most of soils will use some to good advantage, especially if a little heavy and wet or if inclined to be sour or to mold or get mossy if not turned over often. Of course you do not want to use such soil anyway, if anything better can possibly be secured, but if you have some such soil you can frequently put it in good shape in two or three years by working it over as often as possible, adding lime, charcoal ashes, salt, manure, etc., and leaving it well exposed to the winter frosts.

But, to recapitulate, use salt and use it liberally, as the stable yard is cleaned, if possible, but if you cannot do this as soon after as possible as it is much better used at a late date than not at all. The more promptly it can be used, the better the results, especially, as I said before, in preventing horse manure from burning and so losing the most of its value. Brine from pork barrels and from ice cream freezers, etc., is excellent, and it is well to procure it whenever one can do so conveniently and reasonably.

R. E. SHUPHELT.



TIME TO FLOWER BULBS.

Will you kindly tell us how many weeks it takes to force cold storage valley and giganteum lilies and French and Dutch trumpet narcissi? We live in the state of South Carolina. B. F. C.

Cold storage lily of the valley requires from three to four weeks to flower, according to temperature and other conditions. It is an advantage not to force it too hard, in order to give the flowers more substance and secure some foliage with it. Four weeks is ample time to allow.

Lilium longiflorum giganteum takes a little longer to force into flower than the ordinary longiflorum or the variety multiflorum. Much, of course, depends on the time you want to start your bulbs. Potted in the middle of July, you should have them for Thanksgiving, although a few may come later. For Easter flowering the bulbs should be potted not less than twenty weeks, six weeks of this being allowed from the time buds are showing until the flowers open in an average temperature of 60 degrees.

French Trumpet Major narcissus, if placed in flats as soon as received, usually on early August, can be flowered by Christmas, but is better in January. Dutch Trumpet Majors arrive later, and cannot be forced as early as the French bulbs. Started in September, they will flower from the third week in January onwards. Each of these narcissi should be allowed from sixteen to twenty weeks from starting to flowering, according to the temperature given. In your state the shorter period should suffice. C. W.

Leatherman's Semi-double Shasta Daisy.

A SEMI-DOUBLE SHASTA DAISY.

At this time, when the Shasta daisy is so fine and is selling so well in flower stores, it will be of interest to note that an Indiana grower, D. W. Leatherman, of Anderson, has what he calls a double form. This he has named the Ostrich Plume Shasta, "on account of its graceful appearance and because it closely resembles that grand aster, Ostrich Plume." Mr. Leatherman thinks he has one of the most useful novelties the hardy perennial class has produced in recent years. This plant was found in the autumn of 1907, and in June of 1908 produced fourteen fine flowers on strong stems twenty four to thirty inches long. Quite a few seeds were harvested in 1908 and the plants are now in bloom, but they all revert to the original type of Shasta. The illustration is a poor one, the photograph lacking detail, but serves to give an idea of the style of flower. The center is rich gold. The petals are narrow and fold over the center gracefully.

DECORATING THE GREENSWARD

SUMMER BEDDING.

[A paper by Edwin Lonsdale, of Girard College, Philadelphia, read before the Philadelphia Florists' Club, July 6, 1909.]

When your committee invited your humble servant by letter to write something about the latest in outdoor flower bedding, I hesitated so long before replying that the chairman of the committee, Robert Kift, paid a personal visit, and his pleading was so effective and irresistible that all I can now say is, "Here I am."

Lawn adornment opens up a wide field, altogether too wide to be considered at all satisfactorily in the brief space that may be allotted to its consideration this evening, so the best that can be done with so important a subject under existing conditions is to give it a "touch and go" treatment.

The first thing that naturally suggests itself when considering the embellishment of a lawn is to produce an inviting and restful effect, and the best material to make use of is shrubbery and shade trees judiciously planted, and what is of equal importance is a seat here and there; let these be as informal or as rustic, yet as comfortable for the purpose intended, as it is possible to have them. Let shrubs, both the deciduous flowering and the ornamental evergreens, be disposed as nearly with natural effects as possible. Many of the strong growing grasses add a grace to any plantation that nothing else can give.

Do not dot plants on a lawn unless they are made to appear to have naturally escaped from a near-by group. I once saw a lawn planted with such regularity that in the distance the bushes had the appearance of cocks of hay.

Arrangement of the Shrubbery.

Let the shrubs occupy spaces on the extreme outside of the lawn, avoiding straight lines in the planting in all cases, allowing sufficient space between each plant for the future development. For the first few years after planting, what may seem too much room may be occupied with such flowering annuals as may suggest themselves to those who have the work in charge, and the more lasting hardy perennials could to advantage be interspersed between.

Great care must be exercised, in the association of the varicolored annuals and the perennial flowering plants, to avoid clashes in coloring. It is far easier to avoid color clashes in the tender bedding plant combinations than it is with the hardy outdoor flowering plants, although too often we do see the scarlet zonal pelargoniums and the magenta-pink colored varieties of the same in too close proximity with each other to be harmonious.

Vases judiciously placed—which means never in the center of a plot or lawn, and where water is of easy access so as to give it in abundance when requisite, which is generally once a day and frequently twice—are often very effective, especially on the edge of a pond or lake, but by all means refrain from planting purple petunias in the same vase with scarlet geraniums or any other colors with which they may produce discord.

Some Differences of Opinion.

Many of my hearers will remember that strong paper read at a convention in the early history of the Society of American Florists, held in Buffalo, N. Y., in which the essayist advocated the omission of all flowering plants from lawns and pleasure grounds, and the use of nothing but grass, trees and shrubbery, and you will also remember what an uproar went up all over the country in vigorous protest.

And only last summer a lady visitor at Girard College, on entering the lodge

Harry Turner.

gate, stood, and in no unmistakable terms exclaimed, "What a pity to cut up the lawn and plant thereon those horrid geraniums!" And so it goes. It is impossible to please everyone.

The cactus bed which we have in Girard College grounds attracts more attention than all the croton, geranium, or miscellaneous beds combined.

The president of Girard College only a short time ago said, with much apparent gratification, that the "front" never looked better. While the too plentiful use of the scarlet geranium (zonal pelargonium) may not be considered in the best of taste as we have it this year, I believe its very brilliancy in coloring in the past has attracted many persons' attention to the gardening, and when once a person's interest has become aroused in gardening, the rest is easy. The end has justified the means. It has served as a means to an end, and has acted as a primer, as it were, or rather as the kindergarten to aid floriculture.

Appealing to Popular Taste.

In a public garden, as well as in any other, the geranium appeals to the popular fancy, and for that purpose I believe it will hold its own for a long time to come.

Personally, I have no use for the pink varieties, for the most part, because they do not harmonize with the brighter reds or scarlets. At one time I did not like the salmon tinted varieties of geranium, but now I welcome them, because they harmonize with the brighter reds and scarlets. There is no color clash with these brighter colors, provided the blue combination is kept in due subjection.

It should be understood in this connection that the landscape gardener has previously completed his work, though one suggestion I will venture to propose, and that is that when space permits I would advise that a triangular tree plantation be made, not too far away from the residence, and that the trees used be the pin oak, Quercus palustris, where these trees render a good account of themselves or when no better tree for a given locality suggests itself. Let these be planted at least sixteen feet apart, in triangular form, and those of my hearers who contemplate such a planting will be surprised to find how amenable they will be to the prescribed landscape effects. And, what is of equal importance, after the trees have had a few years' growth, they may be brought into requisition as hammock supports. Three trees, properly disposed, will support or rather furnish supports for three hammocks, which will undoubtedly furnish another point in the restful effect so much desired in all lawn adornments.

The Girard College Grounds.

The planting of flower and foliage beds in lawn adornment is considered to be worthy of our best thoughts. Especially does this apply in public and semi-public gardens connected with our popular institutions. In the Girard College grounds, with which yours truly is connected, the idea is to make as much display with the plants we have on hand as is possible, and we proceed as follows: In the spring we plant pansies, forget-me-nots, Alyssum saxatile and Arabis alpina between and associated with tulips, hyacinths, etc., which had been planted during the late October and early in the November previous. This combination for spring flowering is very effective.

Wallflowers are also found to be good for spring bedding when planted as above indicated, between bulbs of last fall's planting, or for independent planting in spaces unoccupied. Wallflowers sown late in June or early in July, if transplanted once or twice, will make effective planting for spring work. For summer blooming there is nothing superior to geraniums, and when we desire foliage plants nothing is comparable to crotons. The surprise is, judging from how well these showy leaved plants cover themselves with glory in and around Philadelphia, that more of them are not used elsewhere. Cannas, as large flowering plants for distant effect, are most satisfactory. As edging plants, nothing is superior to Abutilon Savitzi, which gives the "white line" more effectively than any other plant that I know of. Echeveria and alternanthera are much used where formal designs are desired, but these are being used less and less as truly artistic instincts are developed, and the time is

not far distant when the formal flower bed will be a thing of the past.

HARRY TURNER.

The accompanying portrait of Harry Turner is reproduced from a snapshot of that debonair gentleman made in the conservatories of his employer, Howard Gould, at Castle Gould, Long Island, N. Y. Mr. Turner is one of the most widely known of the gardeners on the big estates around New York. He has been a leading exhibitor at flower shows and has participated in the activities of both national and local societies for so many years that he has been brought in contact with a greater number of commercial men than most of those whose growing is for private establishments. At the last meeting of the New York Florists' Club he was the choice for vice-president and the president's chair came to him upon the death of E. V. Hallock. Last week Mr. Turner was elected president of the new National Sweet Pea Society, at the organization of which he exhibited a greater number of varieties of sweet peas than any other contestant for the many cups and trophies.

THRIPS ON MUMS.

What is the disease on the enclosed chrysanthemum leaf, and what can you suggest as a cure or preventive? C. L.

The leaf submitted shows no organic disease, but it does show the presence of numerous tiny thrips. I do not know the name of this particular species of thrips, but it is common on mums, particularly when the plants are small, when it is difficult to hit the under side of the leaves with a stream of water. If C. L. will get a small microscope he will see lots of these thrips on the leaves. They are not much bigger than a red spider and resemble it in shape, only they are a dirty white color.

Peony Duchesse de Nemours.

The best remedy is clear water, properly applied. We use a Stott sprayer, which throws a fine stream in an upward direction. Get right underneath the lowest leaf and work up the plant, spraying the under side of each leaf thoroughly. This will take a little time, but it will discourage all the thrips family and the plants will show their appreciation by commencing to grow vigorously a few days afterward. CHARLES H. TOTTY.

NOTES ON THE PEONY

PEONY DUCHESSE DE NEMOURS.

The accompanying illustration is from a photograph made at Portsmouth, Va., and shows Peony Duchesse de Nemours as grown by D'Alcorn & Sons. The center flower was eight inches in diameter and the stem was not disbudded, the other two blooms being on the same stalk. "It is pure white with a desirable tinge of green in the center, giving it always a fresh appearance," says O. W. D'Alcorn. "I am not boosting it with a view to selling roots, but to refute the statements of those claiming they know a better variety. This section of Virginia is unfavorable for the best development of peonies, but in France, Belgium, Holland and England I have always seen this variety beat all others. Given an ideal climate and the best of treatment, it will grow six inches in depth of flower, coming to a point. Veitch won the gold cup with it, in 1903, I believe. Personally I never have seen a better peony, and I have visited all the principal European growers."

There are two peonies bearing the name of Duchesse de Nemours. This is the one of Calot, 1856. Eight growers sent it to the original Cornell trials of the American Peony Society. W. A. Peterson says it is "pure white without markings, with large guard petals and extremely fragrant." Henry A. Dreer describes it as "an extra fine large white." John M. Good says "each stem bears three to six flowers; all come perfect; it follows Festiva Maxima and is an invaluable white." J. F. Rosenfield calls it "sulphur white with greenish reflex; fine bud; extra." Wild Bros. describe it as "sulphur white with greenish reflex, fading clear white; cup-shaped bloom; one of the best late varieties."

Wild Bros. also have field notes on the Duchesse de Nemours of Guerin, 1840, which they describe as clear rose-pink with lilac-tinted center; large rose-shaped bloom; one of the best early cut flower varieties." The Cottage Gardens Co. was the only one to send the Guerin Duchesse to the Peony Society's Cornell trials. Mr. Ward described it as "bright, clear, violaceous pink with lilac tints in center; large, highly fragrant; one of the earliest, excellent keeper and shipper; a valuable cut flower variety."

So it appears that the florist who plants Duchesse de Nemours will be getting a good thing, no matter which variety he is sent.

PEONY LADY DERBY.

In John M. Good's peony notes, in the REVIEW of July 1, occurs the question: "Lady Derby—Who sent out this peony?"

This variety came from Kelway. I cannot say whether it came to America first under that name or not. The first stock of it I knew of came from J. T. Lovett, Little Silver, N. J. It has been sent here under the name of James Kelway and also under the name of Lady Alexandra Duff. How many more names it may have received no one can tell.

E. J. SHAYLOR.

PAEONIA WITTMANNIANA.

A pæonia species which is little known and which has for years been scarce and rather expensive, is gradually but slowly finding its way into European stocks as its price slowly drops. This is Pæonia Wittmanniana, a charming species, with flowers of a delicate primrose-yellow, not so large as those of some of the varieties of P. officinalis, but of great beauty of form and of pleasing color. These flowers are single, and are succeeded by bright coral-red fruit.

An English gardeners' magazine de-

DECORATING THE GREENSWARD

SUMMER BEDDING.

[A paper by Edwin Lonsdale, of Girard College, Philadelphia, read before the Philadelphia Florists' Club, July 6, 1909.]

When your committee invited your humble servant by letter to write something about the latest in outdoor flower bedding, I hesitated so long before replying that the chairman of the committee, Robert Kift, paid a personal visit, and his pleading was so effective and irresistible that all I can now say is, "Here I am."

Lawn adornment opens up a wide field, altogether too wide to be considered at all satisfactorily in the brief space that may be allotted to its consideration this evening, so the best that can be done with so important a subject under existing conditions is to give it a "touch and go" treatment.

The first thing that naturally suggests itself when considering the embellishment of a lawn is to produce an inviting and restful effect, and the best material to make use of is shrubbery and shade trees judiciously planted, and what is of equal importance is a seat here and there; let these be as informal or as rustic, yet as comfortable for the purpose intended, as it is possible to have them. Let shrubs, both the deciduous flowering and the ornamental evergreens, be disposed as nearly with natural effects as possible. At one time I did not like the salmon tinted varieties of geranium, but now I welcome them, because they harmonize with the brighter reds and scarlets. There is no color clash with these brighter colors, provided the blue combination is kept in due subjection.

It should be understood in this connection that the landscape gardener has previously completed his work, though one suggestion I will venture to propose, and that is that when space permits I would advise that a triangular tree plantation be made, not too far away from the residence, and that the trees used be the pin oak, Quercus palustris, where these trees render a good account of themselves or when no better tree for a given locality suggests itself. Let these be planted at least sixteen feet apart, in triangular form, and those of my hearers who contemplate such a planting will be surprised to find how amenable they will be to the prescribed landscape effects. And, what is of equal importance, after the trees have had a few years' growth, they may be brought into requisition as hammock supports. Three trees, properly disposed, will support or rather furnish supports for three hammocks, which will undoubtedly furnish another point in the restful effect so much desired in all lawn adornments.

The Girard College Grounds.

The planting of flower and foliage beds in lawn adornment is considered to be worthy of our best thoughts. Especially does this apply in public and semi-public gardens connected with our popular institutions. In the Girard College grounds, with which yours truly is connected, the idea is to make as much display with the plants we have on hand as is possible, and we proceed as follows: In the spring we plant pansies, forget-me-nots, Alyssum saxatile and Arabis alpina between and associated with tulips, hyacinths, etc., which had been planted during the late October and early in the November previous. This combination for spring flowering is very effective.

Wallflowers are also found to be good for spring bedding when planted as above indicated, between bulbs of last fall's planting, or for independent planting in spaces unoccupied. Wallflowers sown late in June or early in July, if transplanted once or twice, will make effective planting for spring work. For summer blooming there is nothing superior to geraniums, and when we desire foliage plants nothing is comparable to crotons. The surprise is, judging from how well these showy leaved plants cover themselves with glory in and around Philadelphia, that more of them are not used elsewhere. Cannas, as large flowering plants for distant effect, are most satisfactory. As edging plants, nothing is superior to Abutilon Savitzi, which gives the "white line" more effectively than any other plant that I know of. Echeveria and alternanthera are much used where formal designs are desired, but these are being used less and less as truly artistic instincts are developed, and the time is

not far distant when the formal flower bed will be a thing of the past.

HARRY TURNER.

The accompanying portrait of Harry Turner is reproduced from a snapshot of that debonair gentleman made in the conservatories of his employer, Howard Gould, at Castle Gould, Long Island, N. Y. Mr. Turner is one of the most widely known of the gardeners on the big estates around New York. He has been a leading exhibitor at flower shows and has participated in the activities of both national and local societies for so many years that he has been brought in contact with a greater number of commercial men than most of those whose growing is for private establishments. At the last meeting of the New York Florists' Club he was the choice for vice-president and the president's chair came to him upon the death of E. V. Hallock. Last week Mr. Turner was elected president of the new National Sweet Pea Society, at the organization of which he exhibited a greater number of varieties of sweet peas than any other contestant for the many cups and trophies.

THRIPS ON MUMS.

What is the disease on the enclosed chrysanthemum leaf, and what can you suggest as a cure or preventive? C. L.

The leaf submitted shows no organic disease, but it does show the presence of numerous tiny thrips. I do not know the name of this particular species of thrips, but it is common on mums, particularly when the plants are small, when it is difficult to hit the under side of the leaves with a stream of water. If C. L. will get a small microscope he will see lots of these thrips on the leaves. They are not much bigger than a red spider and resemble it in shape, only they are a dirty white color.

Peony Duchesse de Nemours.

The best remedy is clear water, properly applied. We use a Stott sprayer, which throws a fine stream in an upward direction. Get right underneath the lowest leaf and work up the plant, spraying the under side of each leaf thoroughly. This will take a little time, but it will discourage all the thrips family and the plants will show their appreciation by commencing to grow vigorously a few days afterward. CHARLES H. TOTTY.

NOTES ON THE PEONY

PEONY DUCHESSE DE NEMOURS.

The accompanying illustration is from a photograph made at Portsmouth, Va., and shows Peony Duchesse de Nemours as grown by D'Alcorn & Sons. The center flower was eight inches in diameter and the stem was not disbudded, the other two blooms being on the same stalk. "It is pure white with a desirable tinge of green in the center, giving it always a fresh appearance," says O. W. D'Alcorn. "I am not boosting it with a view to selling roots, but to refute the statements of those claiming they know a better variety. This section of Virginia is unfavorable for the best development of peonies, but in France, Belgium, Holland and England I have always seen this variety beat all others. Given an ideal climate and the best of treatment, it will grow six inches in depth of flower, coming to a point. Veitch won the gold cup with it, in 1903, I believe. Personally I never have seen a better peony, and I have visited all the principal European growers."

There are two peonies bearing the name of Duchesse de Nemours. This is the one of Calot, 1856. Eight growers sent it to the original Cornell trials of the American Peony Society. W. A. Peterson says it is "pure white without markings, with large guard petals and extremely fragrant." Henry A. Dreer describes it as "an extra fine large white." John M. Good says "each stem bears three to six flowers; all come perfect; it follows Festiva Maxima and is an invaluable white." J. F. Rosenfield calls it "sulphur white with greenish reflex; fine bud; extra." Wild Bros. describe it as "sulphur white with greenish reflex, fading clear white; cup-shaped bloom; one of the best late varieties."

Wild Bros. also have field notes on the Duchesse de Nemours of Guerin, 1840, which they describe as clear rose-pink with lilac-tinted center; large rose-shaped bloom; one of the best early cut flower varieties." The Cottage Gardens Co. was the only one to send the Guerin Duchesse to the Peony Society's Cornell trials. Mr. Ward described it as "bright, clear, violaceous pink with lilac tints in center; large, highly fragrant; one of the earliest, excellent keeper and shipper; a valuable cut flower variety."

So it appears that the florist who plants Duchesse de Nemours will be getting a good thing, no matter which variety he is sent.

PEONY LADY DERBY.

In John M. Good's peony notes, in the REVIEW of July 1, occurs the question: "Lady Derby—Who sent out this peony?"

This variety came from Kelway. I cannot say whether it came to America first under that name or not. The first stock of it I knew of came from J. T. Lovett, Little Silver, N. J. It has been sent here under the name of James Kelway and also under the name of Lady Alexandra Duff. How many more names it may have received no one can tell.

E. J. SHAYLOR.

PAEONIA WITTMANNIANA.

A paeonia species which is little known and which has for years been scarce and rather expensive, is gradually but slowly finding its way into European stocks as its price slowly drops. This is Paeonia Wittmanniana, a charming species, with flowers of a delicate primrose-yellow, not so large as those of some of the varieties of P. officinalis, but of great beauty of form and of pleasing color. These flowers are single, and are succeeded by bright coral-red fruit.

An English gardeners' magazine de-

scribes Wittmann's peony as a shy flowerer for some time after planting, and says some patience is requisite before flowers are produced. It is best cultivated in a rich soil, well manured, and is one of the peonies which prefer a partial shade. It should have a place where the sun cannot reach it before ten or eleven o'clock, yet where it will not be exposed to its full glare at midday. A half-shaded place near trees is excellent except in cold districts, where, naturally, a little more sun is required. Still scarce in gardens, this species is a favorite with all who grow it, and who have had it long enough for it to bloom in their hands. Plants can be had in pots, and can thus be planted out at any time. Should roots from the open ground be obtained, however, they may be best planted during the autumn as with other peonies.

SEASONABLE SUGGESTIONS

Lorraine Begonias.

Those who have not been in the habit of growing Lorraine begonias may be disappointed at their slow progress during the hot months. They never make much headway in the summer months, but after the middle of August they will surprise you with their rapid growth. Look over the little plants frequently, and do not allow them to become starved at the roots before repotting them. Keep runaway tops pinched and all flowers removed. This begonia is a perpetual bloomer, if given its own way, but it is inadvisable to allow any flowers to develop now, as they only cripple the plants.

In potting, always use a light compost, half flaky leaf-mold, half loam and plenty of sand. Small shifts are to be preferred; overpotting is a constant cause of failure. The plants want shade, but it need not be heavy, and if your greenhouse bench space is cramped they will grow capitally in a frame.

Crotons and Dracaenas.

These are the months of rapid growth with all tropical plants. The rate at which they now progress is almost bewildering. Plenty of moisture is absolutely necessary, and the air in the house must never feel at all arid.

If you are growing your young stock plunged in coldframes, the ideal place for them in summer, see that the shade on the glass is put on evenly, to prevent scorching of the foliage. A heavy shade will destroy the brilliant coloring of the foliage. For this reason, double-thick cheesecloth is preferable to whitewashing the glass. One advantage of a movable shade is that the plants can have full light on cloudy days. Shut the frames up about the middle of the afternoon, after syringing the plants thoroughly. A brisker heat is possible in frames than houses, and plants grown in them are stockier, better colored and grow much more rapidly than when placed in a greenhouse with a mixed assortment of plants.

Fancy-leaved Caladiums.

Fancy-leaved caladiums are useful decorative plants during the hot summer months. Like dracænas and crotons, they will grow to perfection if plunged in leaves in a frame. They love heat and moisture, and the rate at which they grow in warm weather, when "bottled up" each afternoon, is astonishing.

For piazza-boxes these caladiums are extremely useful. When nicely started they can be planted out and will render a good account of themselves. To follow hydrangeas, fuchsias, pelargoniums, marguerites and other early summer flowering subjects, they are valuable. In hot weather, flowering plants, outside of cannas and geraniums, do not stand long, but the beautifully colored leaves of these caladiums are just as attractive as any flowers, and boxes, vases or urns filled with them can be depended upon to retain their beauty until cool fall nights necessitate their removal.

While fancy-leaved caladiums will stand full sunlight, they want a little shade under glass, and should therefore be given locations where the sun's direct rays will not focus on them.

Cyclamens.

There will be time, now that the mum benching is completed and while you are waiting for the carnations to grow just a little longer before lifting, to give the cyclamens some attention. The only place for cyclamens now is in a coldframe, where the sashes are kept tilted night and day, both top and bottom, to allow a free current of air to circulate among them. Do not shade the glass. It is an easy method of keeping out the sun's rays, but means more spindling plants. Lath shades keep the plants cool, and are readily removed. The plants really are better without any glass covering at all, except in cases of heavy rainfall. At night the dews are beneficial, and if you will take note of how plants progress treated in this way when compared with those in sweltering greenhouses far from the light, you will get a striking object lesson.

This is not saying that good cyclamens cannot be grown in the greenhouses, but better ones will be produced by summer frame culture. Some growers are alarmed when they see a few flower buds appearing. Rub these off and do not worry about them. Keep the plants potted as required. For flowering at Christmas, 6-inch and 7-inch pots are serviceable. Larger ones must be sold at a price a little high for the average flower buyer, to be profitable. In hot weather thrips is liable to damage cyclamens seriously. Either fumigate once in eight or ten days, or spray with a nicotine solution, wetting the under as well as upper surfaces of the foliage.

HOW MANY FARMERS.

"It is an interesting speculation," said Prof. L. H. Bailey at the seedsmen's convention, "as to how many people will in the future be needed on the land to supply food and clothing which persons in other occupations must have. The estimate has been put as low as one-fourth of all the people. I think, myself, that with the growth of intelligence, and with the improvements in farm machinery, we shall eventually find that not more than one-fifth of our population needs to be on the land in order to produce food and clothing for the other four-fifths."

CARNATION NOTES.—EAST.

Treatment of Plants Before Housing.

For a week or two previous to lifting, stock in the field should be handled with a view to encouraging a more firm growth than has been the case during the growing season proper. The idea in producing this mature condition is to enable the plants to better withstand the strain incident to transplanting and reëstablishment.

Since frequent stirring of the surface soil by cultivation favors rapid growth, it follows that discontinuance of this practice will bring about the opposite result, provided the rainfall is not too great.

This slow growth produces tougher leaves and harder stems, and plants lifted in this condition will wilt very little.

We cannot govern weather conditions, but should a soaking rain occur just previous to the time chosen for housing, it would be best to postpone the work for a while, allowing the land to remain in the condition in which the rain leaves it. In any event, cultivation should cease long enough before lifting so that the plants may be free from soft, sappy growth.

When to Cease Topping.

Topping should be discontinued at such time as will allow the new breaks to attain a length of two or three inches by the time the plants are lifted.

Growers having a heavy clay soil are obliged to lift the plants before the surface becomes too hard. For several years we grow our stock on land from which it was impossible to dig plants during a dry spell without serious loss of roots; our only course was to wait for a shower or use the hose.

Weeds should be kept down to the last, not only to prevent the plants being

Odontoglossum Pulchellum Majus.

robbed of food, but to allow free circulation of air. When pulling weeds, always be particular to get the root.

GEO. S. OSBORN.

JAPANESE IRIS.

Iris Kæmpferi is little known as a market cut flower, the gorgeous flowers being somewhat fleeting. Bunches of these and other seasonable perennials are excellent for store decoration at this season, and if named will often lead customers to place orders for them for fall planting.

The popular supposition that this iris must have the edge of a pond or stream so that its roots go into water before it can be satisfactorily flowered is utterly erroneous. In the growing season it loves to be moist at the root, after which time it should be kept much drier. If in wet ground in winter, the chances are that the roots will all rot. For these reasons it should be planted where water will not stand.

By choosing a deep soil, naturally moist, splendid Japanese iris can be grown in an ordinary garden. If perchance weather conditions are dry near flowering time, a soaking with the hose or sprinkler will insure an excellent crop of flowers. About every visitor is charmed with this iris and wants to plant it. The last of August and through September is the best time for this work. You can assure your customers that while a sunken bed, which can be flooded in summer and drained in winter, is ideal, it is not necessary to go to any such expense to have fine Japanese iris.

POTBOUND SPRENGERI.

I have been a reader of the REVIEW for many years, and have been greatly benefited by reading in its columns articles that have been written by growers of general stock or by specialists. In this way, indeed, I have gained most of my knowledge as a flower and plant grower. Of course I have gained something by practical experience, and I believe that if a florist gains anything in this way that is of any degree of value he ought to give his fellow florists the benefit of it.

Questions have been asked several times in regard to growing Asparagus Sprengeri, and especially as to what ought to be done with the old plants after they become potbound. One answer has been, "Throw them out and plant small plants."

This is what prompts me to give my experience with old plants and to describe my treatment of them. If the plants are in 8-inch or 10-inch pots, or whatever size they are in, I take them out of the pots, take a sharp knife and cut all the tubers away by cutting square across them. I fill the pot with good, rich soil to a depth that will fill the space occupied by the tubers, putting the clump back in the same size of pot. Try this, and I think you will never throw away old clumps of Asparagus Sprengeri. It will give you finer sprays than you ever got from young plants, and more of them.

S. M. WYATT.

ORCHIDS

DENDROBIUMS.

Dendrobium nobile, in cultivation since 1837, still remains the most popular dendrobe in general culture. At the season while the new growths are being made, a brisk, moist atmosphere suits them. They like a little house, where they can be sprayed over and the ventilators closed about the middle of the afternoon. D. Wardianum, D. formosum giganteum and D. Phalænopsis Schrœderianum make, with D. nobile, the best florists' quartette of this useful and easily grown genus. Basket or pan culture suits all dendrobes and they flower all the better if they are kept in rather small receptacles, which more readily dry out later in the season, when the ripening period arrives. Dendrobes want to be abundantly watered now and revel in a close, moist atmosphere.

ODONTOGLOSSUM PULCHELLUM.

While the majority of odontoglossums are difficult to handle in America, owing to our hot summers, there are one or two varieties, such as citrosmum and pulchellum, which succeed well. O. pulchellum

scribes Wittmann's peony as a shy flowerer for some time after planting, and says some patience is requisite before flowers are produced. It is best cultivated in a rich soil, well manured, and is one of the peonies which prefer a partial shade. It should have a place where the sun cannot reach it before ten or eleven o'clock, yet where it will not be exposed to its full glare at midday. A half-shaded place near trees is excellent except in cold districts, where, naturally, a little more sun is required. Still scarce in gardens, this species is a favorite with all who grow it, and who have had it long enough for it to bloom in their hands. Plants can be had in pots, and can thus be planted out at any time. Should roots from the open ground be obtained, however, they may be best planted during the autumn as with other peonies.

ODONTOGLOSSUM PULCHELLUM.

While the majority of odontoglossums are difficult to handle in America, owing to our hot summers, there are one or two varieties, such as citrosmum and pulchellum, which succeed well. O. pulchellum

is a native of Mexico, being introduced to England in 1840. The variety majus is more robust in habit than the type, the flowers also being larger. It is one of the most persistent blooming of orchids. Our plants invariably throw a good crop of spikes both in fall and spring. The flowers, which are pure white, are produced on thin but wiry stems. They are deliciously fragrant, the odor being not unlike that of lily of the valley, and it is sometimes called the lily of the valley orchid.

The flowers keep fresh for several weeks and for boutonnieres, small epergnes or choice funeral work are excellent. It succeeds well under conditions the reverse of suitable to such varieties as crispum and Pescatorei, and for these reasons is well worthy of the attention of commercial growers. The leaves, produced in pairs from the dark green bulbs, are quite narrow and ovoid. The plants grow well in pans of sphagnum moss and chopped fern fiber in the cool orchid house, a north house being necessary in summer.

W. N. Craig.

VALLOTA PURPUREA.

Vallota purpurea is not much grown commercially. Its flowering time is August, when the demand for pot plants is at a somewhat low ebb. There are, however, not a few retail growers who have call for flowering plants during the summer months, and for them the Scarborough lily, as it is commonly called, would be extremely useful. Introduced from the Cape of Good Hope 135 years ago, it is surprising to find how many people are yet unacquainted with it. Both here and in Europe it is a favorite with amateur growers who possess no greenhouses, and fine specimens are often seen in cottage windows which excite the envy of the florist or gardener.

While belonging to the family Amaryllidaceæ, the vallotas do not want any winter rest, as do the amaryllises themselves, and failures in culture can usually be traced to drying off in winter, and to overpotting. Like the Guernsey lilies, or nerines, the vallotas are impatient of root disturbance, and will not flower unless the pots are matted with roots. A suitable compost consists of fibrous loam and dry cow manure in equal parts, adding a little flaky leaf-mold, sharp sand and charcoal. The bulbs should not be covered, but should rise above the surface, as in the case of amaryllis. A little frost will not injure the plants, which can be carried over winter in an unheated pit or frame. In California and some of the more balmy southern states these bulbous plants succeed well outdoors. Once in three to five years is as often as the plants will require repotting. They require no shade, and succeed well outdoors from May to October.

Toronto, Ont.—J. H. Dunlop reports an excellent season, but says retail business has now fallen away. Geo. M. Geraghty says he thinks it even quieter in a retail way in Toronto in summer than it is in some cities farther south.

Peoria, Ill.—A recent fire at 224 South Adams street, next door to the hotel where F. Nichols has his flower stand, gained such headway that great effort was necessary to prevent its spreading to the neighboring buildings. Mr. Nichols was the first to lend a hand in fighting the flames and rendered gallant service.

.....BUSINESS AND OTHER NOTES.....

Georges Mills, N. H.—Mr. Richardson, of Waltham, Mass., is at work for Robert Gould, the local florist.

Quincy, Mass.—E. Arnold, the florist at 1505 Hancock street, in the Music Hall block, has opened ice cream parlors.

Lenox, Mass.—Ernest Marsh has completed his work at the Elm Court greenhouses and has sailed for Liverpool, England.

Everett, Mass.—The board of aldermen has ordered an appropriation of $1,500 for the repairing of the greenhouses at Glenwood cemetery.

Bowdoinham, Me.—E. B. Sprague was in Woolwich recently, delivering 7,000 cabbage plants and several thousands of celery to F. W. Carlton.

Buffalo, N. Y.—Mrs. William Scott, whose condition recently was reported as serious, is now able to be about the house and her condition gives promise of complete recovery.

Brookline, Mass.—The firm of J. F. & D. J. Quinn, on Harvard street, has been dissolved, James F. continuing at the old stand and David J. going to the Beacon street store, at Coolidge corner.

Neenah, Wis.—Louis Otto has torn down his old greenhouses and has begun work on the construction of a new range. The material for the new houses is furnished by the John C. Moninger Co., Chicago.

Putnam, Conn.—E. M. Arnold, who already has two large greenhouses on Farrows street, is about to erect two additional ones. This florist-gardener reports an unusually brisk business so far this summer.

Beatrice, Neb.—The Nebraska State Horticultural Society will meet here July 21 and 22. A feature of the entertainment the second day will be a ride through Carl Sondregger's nursery and a visit to the greenhouses of the Dole Floral Co.

Dixon, Ill.—C. H. Fallstrom, for a number of years associated with one of the leading florists of Chicago, has opened a flower shop at 106 First street. He will handle all kinds of cut flowers and potted plants in season, making a specialty of designs and bouquets.

Dalton, Mass.—The contract has been let for the erection of an eight-room colonial residence for the use of John Shield, florist on Fred G. Crane's estate. This cottage will cost $9,000 and will be conveniently located with reference to the greenhouses which were recently built on the Crane property.

Bay City, Mich.—In the great industrial parade on the second day of the city's semi-centennial celebration, July 6, two firms of florists made a showing that was highly creditable to the trade. Boehringer Bros. had a fine display, surmounted by snow-white doves, one driving a flock by means of pink ribbons held in her beak. The William Roethke Floral Co. had a beautiful bower in which sat a young woman playing a floral harp, while around her were several prettily dressed little girls.

Spencer, Ind.—A. Gray, of this place, is now shipping gladiolus blooms in large quantities. The stock this year is extra fine. He will cut this year about 100,000 blooms, under ordinary conditions. Mr. Gray grows nothing but gladioli and gives his entire time to gladioli for cut flowers.

Madison, N. J.—Charles H. Totty has taken over the Florham Farms greenhouses on a lease and so, after a lapse of five years, returns to the scene of his earlier efforts. He will run the Florham Farms houses in conjunction with his own place and will have facilities for enlarging his wholesale business in young stock of chrysanthemums, roses and carnations.

Wichita, Kan.—The Culp Florist Co. has outgrown its quarters at Elm and Market streets. It is just about to move into a plant three times as large as the original. The new greenhouse will cover 1,800 square feet, while the property comprises a whole block at Dort and Harrison streets in West Riverside. The company will now be able to grow all its cut flowers on the premises.

Kearney, Neb.—W. L. Hunt, for the last year or so manager of the Kearney Floral Co., has gone to Rockford, Ill., where he will engage in business for himself. Downing & Son, proprietors of the greenhouses, state that the new manager, Edward W. Schueler, of Cincinnati, O., will arrive in Kearney August 1, to take charge of the houses. In the meantime Paul Carroll, who has been under the tutorage of Mr. Hunt for several years, will look after the place, assisted by the Downings. Mr. Hunt has built the Downing houses up to a high standard of excellence.

Cambridge, Mass.—The store at 1927 Massachusetts avenue, formerly occupied by John McKenzie, and the old house adjacent to it, have been torn down, preparatory to the erection by Mr. McKenzie on the same site of a modern four-story brick apartment house which is to contain fourteen apartments and a new store for Mr. McKenzie, which will be much larger and more convenient than his old store. He expects that the block will be completed by November 1. In the meantime he is to conduct his business from his greenhouses, which are located on Whittemore street, at the foot of Magoun street.

Cedar Falls, Ia.—July 4 was the sixtieth wedding anniversary of Mr. and Mrs. Joseph Bancroft, and the occasion was celebrated on Monday, July 5, by the family and by a party of about 175 friends and neighbors, assembled at the Bancroft home. The health and strength of the host and hostess indicated that the years had dealt kindly with them. The sons and their wives, Mr. and Mrs. J. W. Bancroft and Mr. and Mrs. George Bancroft, assisted in entertaining the company. The rooms were made attractive with choice flowers and potted plants. Festoons of smilax were draped over the dining-room table and tied with red, white and blue ribbons, while flags were everywhere in evidence. Two elegant chairs, upholstered in leather, were presented to the honored couple.

OBITUARY.

Mrs. Margaret B. Aschmann.

Mrs. Margaret B. Aschmann, wife of Godfrey Aschmann, the well known Philadelphia florist, died suddenly at the family home, 1012 West Ontario street, Philadelphia, July 10, at the age of 63 years.

She was stricken with apoplexy on the morning of July 3, and though she lived for a week, never regained consciousness. The funeral services were from the late residence, at 2 p. m., July 14, and were largely attended. Interment was at Chelten Hills cemetery.

Besides her husband, six children are left to mourn her loss.

Herbert Heller.

Herbert Heller, of New Castle, Ind., died July 9, after a protracted illness with cancer of the stomach.

Mr. Heller was widely known in the trade, and had a host of friends who long had known that his illness must terminate fatally, and to whom his condition was a sorrow. The last time he was seen by many was at the Indianapolis convention of the American Carnation Society in January. A few days after that meeting an operation performed in an Indianapolis hospital revealed the fatal character of his disease. He was of genial disposition and an active, progressive man of many interests, a frequent visitor to Chicago, St. Louis, Cincinnati, Pittsburg and other markets, and always bringing a good nature that made his welcome sure, and made the progress of his illness a matter of general concern.

Herbert Heller was born at Knightstown, Ind., in 1871. After the removal of the family to New Castle he and his elder brother, Myer, who built up a prosperous department store, took up the greenhouse business as a profitable investment. They grew roses with much success, and soon the flower business came to occupy the larger part of Herbert Heller's time and attention. The South Park Floral Co. became a leading exhibitor at the big western flower shows, and the range of glass grew rapidly. Beauties always have been the principal crop, and it was the immediate success of the Heller establishment that attracted attention to New Castle as a rose center and inspired the building of the other large places that prosper there. He made the names of Heller and New Castle known the country over by wide advertising of rose plants in the general magazines, first only as a method of disposing of year old plants from the benches.

Mr. Heller married six years ago with Miss Mary Smith, of Indianapolis. They had one son, now a little more than a year old. He also leaves a venerable mother, a sister and his brother, Myer. Mr. Heller had accumulated a considerable estate. He was a member of the S. A. F., the American Carnation Society, and other trade organizations, including the Society of Indiana Florists. He also was an Elk and an Odd Fellow.

The funeral was held Monday morning, July 12, and was largely attended. Rev. Frank C. Hood, a former New Castle pastor, now located at Madison, had charge of the service, assisted by Rabbi Feurlicht, of Indianapolis. The active pallbearers were the older employees of the South Park Floral Co., and there were a number of honorary pallbearers. The Odd Fellows lodge had a short service at the grave at Southmound. There were many flowers.

Herbert Heller.

Philip Hagenburger.

Philip Hagenburger, for thirty-five years florist for the Lake Shore railroad, died at his home in Mentor, Ohio, July 5, aged 64 years. Death was due to an attack of neuralgia of the heart, and came within a few hours after the first feeling of illness. For a generation Mr. Hagenburger had charge of all the depot gardening on the Lake Shore road, from Buffalo to Toledo.

The funeral service was from the old home in Mentor, on the afternoon of July 7. Mr. Hagenburger is survived by a wife and four children. One of the latter is Carl Hagenburger, of West Mentor, Ohio, himself a widely known florist.

Mrs. John E. Haines.

The many friends of venerable John E. Haines, of Bethlehem, Pa., will regret to learn of the death of Mrs. Haines, which occurred last week. Mr. Haines became widely known in the trade through the raising of carnation seedlings and the dissemination of several, principal of which is the one bearing his name. He has been a regular attendant at the meetings of the American Carnation Society.

A. G. Burtnett.

Abraham Garrison Burtnett, formerly a florist in Maiden lane, New York city, died at his home in Bronxville, N. Y., July 5, at the age of 72 years.

BUFFALO.

The Market.

Business is extremely quiet, and has been since the first of the month. Cheap stock is about the only thing offered and bargains are seen in the windows every day. Sweet peas are selling at 5 and 10 cents per bunch, carnations, two dozen for 25 cents. Even with these low prices, the greater part of the stock is wasted. The weather has been unbearably hot the last few days, driving people to the water fronts, and few, if any, social functions are taking place. Since July 1 all the stores have been closing at 6:30, to continue during July and August.

Various Notes.

The club outing is to take place the latter part of July. Further particulars will appear in the next issue.

A number of the boys are spending their vacations at different nearby resorts.

Early asters have suffered a severe shock from the extreme dryness, which has lasted about three weeks.

George McClure, Jr., is to make an extensive trip through the middle west, starting out in a few days. The main object of his trip is to obtain photographic views of lanscape effects which are displayed in different parts of the country.

A. Adams, with S. A. Anderson, is to read a paper at the coming meeting of the Florists' Club entitled, "Flower Bargains." R. A. S.

OAKHURST, N. J.—Leonard Long, who has for some time been with Henry A. Dreer, Riverton, has bought out W. D. Robertson and will do a general florists' business.

ALLENTOWN, PA.—E. N. Kroninger has almost completed two new houses, 57x400 feet. He will also erect a boiler house fifty feet square and install a 135 horse-power boiler. The new houses will more than double the former space Mr. Kroninger had under glass.

NOBLESVILLE, IND.—Trade during the last year has been good, and both J. R. Hamble and Miss Lizzie Koch have had a prosperous business, though prices have been rather low. Mr. Hamble has built another greenhouse, 16x65. He will also construct eight beds, 5x66 feet and eighteen inches high, with sides of concrete, and will pipe these beds for hot water and cover them with sashes for next winter.

is a native of Mexico, being introduced to England in 1840. The variety majus is more robust in habit than the type, the flowers also being larger. It is one of the most persistent blooming of orchids. Our plants invariably throw a good crop of spikes both in fall and spring. The flowers, which are pure white, are produced on thin but wiry stems. They are deliciously fragrant, the odor being not unlike that of lily of the valley, and it is sometimes called the lily of the valley orchid.

The flowers keep fresh for several weeks and for boutonnieres, small epergnes or choice funeral work are excellent. It succeeds well under conditions the reverse of suitable to such varieties as crispum and Pescatorei, and for these reasons is well worthy of the attention of commercial growers. The leaves, produced in pairs from the dark green bulbs, are quite narrow and ovoid. The plants grow well in pans of sphagnum moss and chopped fern fiber in the cool orchid house, a north house being necessary in summer.

W. N. Craig.

VALLOTA PURPUREA.

Vallota purpurea is not much grown commercially. Its flowering time is August, when the demand for pot plants is at a somewhat low ebb. There are, however, not a few retail growers who have call for flowering plants during the summer months, and for them the Scarborough lily, as it is commonly called, would be extremely useful. Introduced from the Cape of Good Hope 135 years ago, it is surprising to find how many people are yet unacquainted with it. Both here and in Europe it is a favorite with amateur growers who possess no greenhouses, and fine specimens are often seen in cottage windows which excite the envy of the florist or gardener.

While belonging to the family Amaryllidaceae, the vallotas do not want any winter rest, as do the amaryllises themselves, and failures in culture can usually be traced to drying off in winter, and to overpotting. Like the Guernsey lilies, or nerines, the vallotas are impatient of root disturbance, and will not flower unless the pots are matted with roots. A suitable compost consists of fibrous loam and dry cow manure in equal parts, adding a little flaky leaf-mold, sharp sand and charcoal. The bulbs should not be covered, but should rise above the surface, as in the case of amaryllis. A little frost will not injure the plants, which can be carried over winter in an unheated pit or frame. In California and some of the more balmy southern states these bulbous plants succeed well outdoors. Once in three to five years is as often as the plants will require repotting. They require no shade, and succeed well outdoors from May to October.

Toronto, Ont.—J. H. Dunlop reports an excellent season, but says retail business has now fallen away. Geo. M. Geraghty says he thinks it even quieter in a retail way in Toronto in summer than it is in some cities farther south.

Peoria, Ill.—A recent fire at 224 South Adams street, next door to the hotel where F. Nichols has his flower stand, gained such headway that great effort was necessary to prevent its spreading to the neighboring buildings. Mr. Nichols was the first to lend a hand in fighting the flames and rendered gallant service.

.....BUSINESS AND OTHER NOTES.....

Georges Mills, N. H.—Mr. Richardson, of Waltham, Mass., is at work for Robert Gould, the local florist.

Quincy, Mass.—E. Arnold, the florist at 1505 Hancock street, in the Music Hall block, has opened ice cream parlors.

Lenox, Mass.—Ernest Marsh has completed his work at the Elm Court greenhouses and has sailed for Liverpool, England.

Everett, Mass.—The board of aldermen has ordered an appropriation of $1,500 for the repairing of the greenhouses at Glenwood cemetery.

Bowdoinham, Me.—E. B. Sprague was in Woolwich recently, delivering 7,000 cabbage plants and several thousands of celery to F. W. Carlton.

Buffalo, N. Y.—Mrs. William Scott, whose condition recently was reported as serious, is now able to be about the house and her condition gives promise of complete recovery.

Brookline, Mass.—The firm of J. F. & D. J. Quinn, on Harvard street, has been dissolved, James F. continuing at the old stand and David J. going to the Beacon street store, at Coolidge corner.

Neenah, Wis.—Louis Otto has torn down his old greenhouses and has begun work on the construction of a new range. The material for the new houses is furnished by the John C. Moninger Co., Chicago.

Putnam, Conn.—E. M. Arnold, who already has two large greenhouses on Farrows street, is about to erect two additional ones. This florist-gardener reports an unusually brisk business so far this summer.

RESULTS.
We give them. You get them.
We both have them.

THERE is still a good sale for chrysanthemum plants.

DON'T wait until everyone has finished benching carnations before you advertise your surplus.

BOSTON ferns in all sizes, but especially the larger ones, are in even better demand than usual at this date.

THE Senate version of the tariff bill, so far as it affects horticultural imports, will be found on page 36.

A DUTY of $1 per thousand on tulip bulbs should go some little way toward encouraging the planting of the better varieties, since it amounts to a substantial reduction of cost.

CHARLES H. VICK says Rochester declared herself a year ago and is out for the S. A. F. convention in 1910. A new convention hall is being built, which will allow all exhibits to be staged on the ground floor and will also contain spacious rooms for meetings.

THE sweet pea certainly merits the consideration it is receiving. From many cities has come the story that it was among the best selling flowers as long as the winter crop was on, and now from some markets comes the report that nothing sells better than the outdoor peas.

IT will pay growers to follow special articles in the REVIEW with advertisements of the plants under notice. Unless the advertising columns contain offers of the plants mentioned, almost every article brings the editor inquiries from readers who want to know where the stock is to be had.

THE July crop report of the government, with its promise of banner crops of all cereals, affords every assurance of a prosperous season to come. Wealth on the farm is generally considered to mean good general business, of which the florists always get their share. The figures of the crop report will be found on page 36.

WRITE YOUR CONGRESSMAN.

A wave of protest is rolling on Washington from all parts of the country as a result of the proposed tax upon the net earnings of corporations, but there is no line of business in which the proposed tax will be more unequal and unjust than in the florists', seed and nursery trades. There are a large number of incorporated concerns engaged in these lines, but practically all of them are family affairs; there are almost no corporations of the many in the horticultural trades in which the stock issue is in the hands of the general public. These horticultural corporations are virtually partnerships, and their competitors that actually are partnerships and have no stock issue will not be subject to the law or the tax. The big corporations that are called trusts oppose the proposed law because it gives the government the authority to inquire into their ways of conducting business. Probably no florist is specially opposed to letting Uncle Sam know how his books stand, but there is neither right nor justice in further taxing the incorporated greenhouse firms and letting the equally large and prosperous partnerships go.

Every incorporated florist, seed and nursery concern should write at once to the congressman representing its district, protesting against this unequal taxation.

DON'T LET STOCK STAND.

There are many factors which may influence an advertiser part of the time, but it is actual results which influence him most of the time.

Cut out my adv.; it was a ripper; I am sold out, but you will hear from me again.—A. T. Linn, Lock No. 4, Pa., July 11, 1909.

Those who have Boston ferns, field-grown carnation plants, chrysanthemum plants or other seasonable stock will find a good market if they make their offers known in the REVIEW.

MIDSUMMER WEATHER.

The government weather bureau tells the following tale of the temperature and tempests:

The cool weather that set in during the latter part of the preceding week continued over most districts during the greater part of the week ending July 13, the only section not included in the above being the lower Mississippi valley and the southern portion of the great plains region, where, during the latter part of the week, the temperatures were generally high. As a rule the temperatures increased slightly as the week advanced, and at its close they were about normal in all northern and western districts, and decidedly above normal in the middle Mississippi valley and portions of the southwest. The mean temperature for the week was above normal by a small amount in the upper lake region and by a large amount over the lower Mississippi valley and thence westward over the southern portion of the great plains and southern Rocky Mountain plain region, and at a few points in California. Over the remaining districts the average temperature for the week was below normal. Maximum temperatures were above 90 degrees generally over the southern half of the country. Over the great agricultural districts the night temperatures ranged generally from 55 to 75 degrees. Frequent local showers characterized the weather of the week over the Missouri, the middle Mississippi and Ohio valleys and portions of the east Gulf states.

Falls of rain occurred July 7 and 8 in portions of western Missouri, southern and western Iowa, southeastern South Dakota and the eastern portions of Nebraska and Kansas, the amounts ranging from three to more than thirteen inches. Local heavy floods resulted in smaller streams of those districts, and there were sudden and decided rises in the lower Missouri and its larger tributaries in the states mentioned. A number of lives were lost and heavy local damage resulted to crops in the region affected.

There were some unusually heavy rains for the season and locality from the Rocky Mountains westward over large portions of Montana, Idaho, Washington and Oregon.

The week was practically rainless over a large portion of the Appalachian Mountain region from Maryland northward, and only light showers occurred over the southern portions of Florida. West of the Mississippi river there was little or no rain in large portions of Louisiana, Arkansas, Oklahoma and Texas, although some heavy showers occurred in the Panhandle region and mid-Rio Grande valley of the last named states. There was generally excess of sunshine in the cotton growing states, except in the states of the South Atlantic coast, and there was the decided lack of rain in states west of the Mississippi river.

BEAUTIES Our Famous Summer Crop

For years we have supplied the best Summer Beauties to be had in the west. Most Beauty buyers know this, and we have each season increased our production, to be able to take care of the constantly increasing demand. This year our cut is larger and finer than ever. Fancy long stock and plenty medium and short, all with good heads and fine color. **We hope to hear at once from every Beauty buyer.**

Peonies

Our Peonies are excellent; they invariably give satisfaction. Nothing better for either funeral sprays or mid-summer decorations.

Kaiserins

If you need good white roses, you want our Kaiserin—there are no other white roses so good. We have a good cut in all lengths, but advise early ordering, for this kind of stock doesn't hang around.

Sweet Peas

We again have fancy Sweet Peas in enormous quantity. No matter what you want in Summer Flowers, order of us and get good stock. Lilies, Shasta Daisies, Gladioli and everything else in season.

Green Goods

The best Ferns in the market, $1.00 per 1000. Long heavy strings of SMILAX, Farleyense and Adiantum.

CHICAGO.

The Great Central Market.

Every year at this date one hears that business never was so dull as now, but those who are not content with general impressions and who consult their books generally are finding that business now is fully up to what it ever has been at the middle of July. With some houses there may be a slight falling off, due to lack of salable stock, but other houses which have provided summer cuts are doing better than ever before, and the total of business in the market is probably slightly better than in previous summers; certainly not due to high prices, but to a general broadening of the business.

It is undeniably quiet. The market is just between hay and grass. The stock cut from old plants is extremely poor, and the young plants have not yet developed to the point of giving good flowers; also, the carnations are small and soft, and the asters have not yet arrived to take their places.

There is extremely little good stock in the market; in fact, not enough to supply the demand. There is a good call for really first-class Beauties, for there is no other rose which gives so good satisfaction to the public at this season. Also, there is a good call for Killarney, with the quality offered not nearly so good as it has been. Kaiserin is still in light supply, and White Killarney only just beginning to come in. Bride is so small in flower that it is not satisfactory. There are larger supplies of Richmond, comparatively speaking, for the demand for this variety is slight in hot weather; the quality also is excellent for the season.

It seems the cheap peonies never will be cleaned up, for those who conduct the cheap sales still are able to get all they want at their own prices. At the same time, there is the normal mid-July sale for the best grade of goods. Probably the larger part of the good stock is well sold at three bunches for $1, but there are nevertheless buyers who are perfectly willing to pay from 50 cents to 75 cents for the best grades. Quite a number of good peonies are being shipped out, because they are among the most satisfactory flowers on the market at this time.

In some houses the supply of carnations is extremely light, because growers

Mention The Review when you write.

are replanting, but in other places the fact that the averages frequently fall below 5 cents per bunch does not seem to influence the growers to jettison the old plants and give the new ones an early start. Carnations must inevitably be small and soft at this date, but some good, clean stock is yet to be had, the whites selling best because the principal demand is for funeral work.

Sweet peas are again in enormous supply, with some excellent Spencer varieties among them. There is a fair sale, but prices are low, and the waste is considerable.

There are large supplies of Shasta daisies, which are selling well. Auratums are plentiful, but longiflorum lilies are less abundant, and the price has advanced a notch. Both outdoor and indoor gladioli are to be had, but the supply is not heavy. Candidum lilies can only be sold at cheapest prices, and it hardly pays to ship anything but the cleanest stock.

Fancy ferns now are abundant, but the wholesalers find it hard to come down from the fancy prices that have prevailed to the price ferns usually command at this date. There is little call for other greens, except asparagus in bunches.

The wholesalers have experienced this week their annual troubles because of the floods in Kansas. Each year the high water there delays the receipt of orders and makes certain towns inaccessible to shipments. This week orders have come to hand two days after shipment was required, and shipments have laid in express cars until stock is ruined.

The wholesale houses now all are closing at 5 p. m., and the retail stores close at 6:30.

All the wholesale houses and most of the retail stores will close at 1 p. m. Thursday, July 22, the day of the Florists' Club's big picnic at Riverview, which everyone will attend.

Greenhouse Investments Pay.

E. C. Amling says he does not know of any investment so profitable as that in greenhouses, either for a practical florist or for a man with capital. This evidently also is the view of Albert F. Amling, vice-president of the Maywood State Bank and head of the Albert F. Amling Co., which built a big range of new houses last year. Last year's addition was not completed until late in the season, and has been producing immense quantities of sweet peas before being planted to Beauties this spring. It now develops that four more 300-foot houses will be built by the Amling Co. this fall, to keep up the sweet pea supply for February and later months next season. William Colletz, the active man on the place, is on a visit at Gorham, Kans., and building will be begun upon his return the latter part of this month.

Various Notes.

The A. L. Randall Co. says sales are running well ahead of last summer, both in cut flowers and supplies. They do not think it is anything more than the normal growth of the business, however, and see no indication that business generally is any better than last season at this date.

The west park commissioners are having their own troubles in the matter of getting bids for the restoration of the Garfield park conservatory. The first attempt produced only two bids, from Lord & Burnham Co. and Hitchings & Co., no local bidders making offers. The park commissioners revised their specifications and invited new bids, to be opened July 13. The result was that they received only one tender, from the A. Dietsch Co., whose aggregate bid amounted to $55,750. No action was taken July 13 and it is yet undecided whether the contract will be awarded to the Dietsch Co., or whether another effort will be made to get competitive bids.

The Florists' Club's picnic committee is hard at work on the arrangements for the outing on the afternoon and evening of July 22 at Riverview park. It is expected to break all records for attendance. Since the wholesalers all agreed to close at 1 p. m. many retailers also have decided to take half a day off and join in the celebration.

J. E. Jensen, of Jensen & Dekema, is rusticating in Wisconsin for a few days. The greenhouses are closed and Theodore Kron, who sold them to Jensen & Dekema, subject to a mortgage, is again offering them for sale.

Frank Beu has returned from a trip east.

William Foith, brother-in-law of Acting Chief of Police Schuettler and manager of that gentleman's greenhouse establishment, known as the Star Carnation Co., at Wilmette, Ill., has gone to Rosedale, Kans., where he has leased the A. G. Belinder greenhouses, formerly operated by O. Triebwasser.

O. W. Frese, of Poehlmann Bros. Co., says that My Maryland is now the best pink rose in the market, and that when White Killarney becomes available in sufficient quantity there will be no one who wants Bride.

Willie Abrahamson, in addition to his purchasing business, now represents Lion & Co., the New York ribbon house.

C. W. McKellar and Mrs. McKellar

WIRE WORK

Write for prices on the quantity of Wire frames it will take to run you through next season. Special prices on orders booked now to keep our factory working full force all summer. Larger the order, lower the prices. Delivery at any time you say. This is a chance to save money—better write NOW.

CUT FLOWER BOXES

Send for our estimate, stating quantity you used last year. We want your order now, delivery Sept. 1 to Oct. 1.

AIR PLANT--Sea Moss

Big seller if you use it to trim your window with in summer. A special circular shows styles and prices of tiny baskets for air plant.

Growers' Supplies

We handle every article a grower needs about a greenhouse. Hose, aprons, fertilizers, insecticides, glazing materials, etc. Better get our catalogue or special quotations on your needs.

CHICAGO FLORISTS' CLUB.

are planning to go to the Cincinnati convention in their new automobile.

When John Cook put My Maryland on the market nearly two years ago, Leonard Kill picked it as a winner, and every day now increases his enthusiasm for it.

Charles Schneider, doing business as the Central Floral Co., at 68 State street, closed up July 10. The fixtures remain in the store, which the landlord is offering for rent. It is said the rental was approximately $100 a week. Only a Greek can stand such a drain.

Otto Benthey and his bride have returned to New Castle. When the groom applied for the marriage license he gave his age as "past 34," a statement not open to question. Mrs. Benthey is a charming lady of 22.

Mrs. J. A. Budlong, A. H. Budlong and Mrs. Phil Schupp, with their families, are summering, as usual, at Lake Geneva. Bert Budlong is with the family this week.

Mons Olson, of the Poehlmann force, feels keenly the death last week of his oldest son, a bright young man of 19, and has the sympathy of everyone in the market.

E. F. Winterson has been in Cincinnati this week on convention sporting matters.

Fred Klingel, of George Reinberg's store force, is on his annual vacation.

Vaughan & Sperry are receiving limited shipments of outdoor asters, and say a large crop will be on by the first part of next week.

Percy Jones says that conditions in the Flower Growers' Market are normal for the date.

G. E. Pieser, president of the Kennicott Bros. Co., starts July 19 for a two weeks' boat trip to Montreal, starting on the Northland to Mackinac.

P. J. Foley, of the Foley Mfg. Co., and John Karsten, the grower at Chattanooga, Tenn., spent Saturday and Sunday on a fishing trip in Michigan.

Nick Kruchten has thrown out all his carnations, and is busy replanting.

Mrs. W. E. Horton, of the Bassett & Washburn force, is on her annual vacation.

Kennicott Bros. Co. says business took a sudden spurt July 8 and has been running much ahead of last year since that date.

August Schaefer, of the E. F. Winterson Co., spent July 11 at Aurora and called on Joseph Smely. Mr. Smely is not recovering from his recent accident as rapidly as was hoped, and it is now feared skin grafting will be necessary.

C. M. Dickinson, manager at E. H. Hunt's, is spending the week with his family, who have a summer cottage at Pelican Lake.

Henry Wittbold, at Evanston, is growing Shasta daisies and gaillardias, and is sending the city stores some excellent stock. The George Wittbold Co. stored a considerable quantity of the peonies cut this season at its Edgebrook nursery.

A. A. LaVaque, with his family, leaves July 17 for a two weeks' trip to Colorado.

A. Lange and family started July 10 for their trip to the Alaska-Yukon-Pacific Exposition and other points on the Pacific coast.

H. N. Bruns says the business thus far this year has been better than ever before in all the lines he handles. He has done more business with valley pips, and with cut valley, and his retail sales also have exceeded any other year.

H. Luedtke, the Maywood grower, had all his chrysanthemums planted before the Fourth, and has not yet started benching carnations, though the work will begin next week. The few days' respite he has spent fishing.

Heim Bros., at Blue Island, received from the Florists' Hail Association $487.83, because of their recent loss by hail.

The Fleischman Floral Co. has closed its north side branch store.

The George Wittbold Co. secured an order from the Harmon real estate people, who are opening a new addition on the northwest side, which has taken all the spring bedding stock they had left on hand.

Among the recent visitors have been Mrs. P. J. Olinger, of Weiland & Olinger, of Cincinnati; E. S. Thompson, the gladiolus and dahlia grower at Benton Harbor, Mich.; C. W. Scott, of New York, on his way to the family home in Wisconsin for a vacation; J. W. Lyon, the Belvidere carnation grower; Lyle C. Waterbury, Denver, buying stock for the Denver Wholesale Florists Co., which is to open September 1; Adam Heim, of the Heim & Son Carnation Support Co., Connersville, Ind.

Bowling.

ST. LOUIS.

The Market.

There is really not much to say regarding market conditions at the present time. At the wholesale houses there is little stock of any kind coming in, and anything that looks good is sold out early. All the growers are cleaning house, and not much is looked for this month. The retail business is dull, and they all say that when no funeral work is on hand there is nothing to do. Nearly everything coming in at the wholesale houses is from the outside.

Roses have been scarce, and the few that are coming in are cleaned out daily and at a good price, considering the quality. Carnations are small. These, too, have been scarce the last week. The wholesalers are asking 2 cents for the best. All the consignments are of rather poor quality.

Gladiolus spikes sell the best of any flowers in season, and the supply is good, but not overplentiful. Sweet peas are about over for this season. Tuberose stalks are coming in, and will soon be plentiful. Everything in greens is in plenty, and smilax, adiantum and asparagus sell well.

Club Meeting.

The regular monthly meeting of the Florists' Club took place Thursday afternoon, July 8, with all the officers and twenty-five members present. The meeting was held in the old quarters. Chairman Ostertag, of the trustees, reported that all arrangements for the club's picnic, July 21, at Romona park, had been perfected, and that the souvenir program would pay the entire expense of the outing, which would be the largest yet held by the club. All florists, regardless of membership, and their families are invited to attend. Everything will be free.

W. C. Smith, who has charge of the club's S. A. F. matters, reported that he had arranged with the Big Four railroad for a special car to carry the club members, also any florist who wishes to attend the Cincinnati meeting. Mr. Smith stated that he had twelve names now of those who were going. All others should hand in their names as soon as possible, as he expects at least twenty-five.

A communication was read from the St. Louis Horticultural Society, asking the club's coöperation for the success of the fall flower show. The club voted to offer a special prize of $50, open to our local growers only.

Representatives of the Big Four and Baltimore & Ohio railroads were present and stated that there were no reduced rates over their lines to the Cincinnati convention, and that the regular rate would prevail on a single person. For ten or more persons riding on one ticket, the rate would be $1 cheaper each way, making the fare $14 for the round trip.

The following members were placed in nomination for the different offices: President, Frank Fillmore and W. C. Young; vice-president, John Connon and Henry Kahrs; secretary, J. J. Beneke; treasurer, William C. Smith; for a three years' term trustee, Fred H. Weber and A. J. Bentzen. The election will take place during the August meeting.

The secretary stated that there were still quite a few delinquent members on his books, who will have to pay up by the August meeting or be dropped from the rolls.

Secretary Bentzen announced that the August meeting would be held outdoors, at his place on Marcus avenue, and he invited all members to attend. Frank Weber, of the H. J. Weber & Sons Nursery Co., then invited the members to hold the September meeting at their place in the country. Both invitations were accepted, with thanks.

After a few interesting discussions, coming from the question box, the meeting adjourned until Thursday afternoon, August 12.

Various Notes.

C. C. Sanders has completed his new greenhouse, 30x100, which is being planted in roses. His family will move into the new residence early next month.

Park Superintendent George Ostertag has returned from his ten-day resting trip to Oakville, Ill. He is looking better, and the trip did him a world of good.

Charles Kuehn received the first con-

signment of Golden Glow mums last week. They sold well.

Mayor Kreisman vetoed the bill for an increase of salary of all park employees, much to the disappointment of the hundreds of park men. The bill had passed both the house and council.

Several hundred long, fancy American Beauties were used by the local trade last week, the occasion being the birthday of Hon. R. J. Lackland, president of the Boatman's Bank, he being 90 years old. All Beauty bunches contained ninety flowers. These, with other bunches, completely filled his offices. Mr. Lackland is a great lover of flowers, and was a lifelong friend of the late Henry Shaw.

Robert J. Windler is off on his vacation trip north. He will also visit Canada before returning home. Miss Rose Windler will be in charge of the store.

J. H. Billington, formerly in the florists' business here on Easton avenue, was a visitor last week. Mr. Billington is now with the United States government as inspector of national cemeteries.

The trade received a shock Saturday, July 10, when the news came of the death of Herbert Heller, at New Castle, Ind. Mr. Heller was well known among the trade here, who extend their sympathy to the bereaved family.

The members of the executive board of the St. Louis Horticultural Society held their regular monthly meeting Tuesday, July 13. F. W. Brockman was chairman of the committee. Arrangements were completed for holding the fall show in the new Coliseum.

The weather has been too hot of late for bowling, but it is expected that by next week those who will make up the team to represent St. Louis at Cincinnati will start practice.

Fred H. Meinhardt, state vice-president of the S. A. F., is out with a letter stating that he has arranged for a florists' special over the Baltimore & Ohio railroad for Cincinnati, leaving Monday, August 16, at 9:28 p. m., the fare being the same as that of the Florists' Club's special over the Big Four railroad. He also states that his special is expected to carry President Valentine and other officials from the west.

The florists of St. Louis and vicinity, with their families and friends, should not forget to attend the club's picnic Wednesday, July 21, at Romona park. The suburban car to Suburban park will take you direct to the grounds. All arrangements are complete, and it is expected that the largest crowd that ever attended a club's outing will be on hand. Do not fail to get a souvenir program of all events.

J. J. B.

DENVER.

New Wholesale House.

The Denver Wholesale Florists Co. has been organized and September 1 will open a general wholesale cut flower commission and supply business at 1433 and 1435 California street. The concern is capitalized at $10,000. The stock is in the hands of some nine leading growers for the Denver market and Lyle C. Waterbury, who will be the manager.

There have been several attempts to establish a wholesale commission business in Denver, which have fallen short of success for one reason or another. The new company will have the backing of the stockholding growers and the advantage of the much broader market which now exists in Denver. Not only has the local demand increased, but the wholesale shipping business extends for hundreds of miles in all directions. It is anticipated that in time, and not such a great time either, Denver will be an important wholesale cut flower center. The supply is increasing as rapidly as is the demand.

Various Notes.

Colorado now has twenty-seven members of the S. A. F., and it is planned to send a big delegation to Cincinnati as an escort for President Valentine. The

SUBJECT TO MARKET CHANGE.

Mention The Review when you write.

party will leave here in season to reach Chicago August 16 and proceed with the Chicago Florists' Club on its special train.

CINCINNATI.

The Market.

Business has been fairly good during the week and if it continues as good during the entire summer season there will be no cause for complaint. The market is well supplied with good stock and ruling prices are fair. Asters of good quality are making their appearance and gladioli are coming much stronger. Some of the America variety were fine and brought the highest price. Lilies of the rubrum variety are meeting a good demand and longiflorum lilies are also good property. There is still a good demand for lilies of the valley. Sweet peas are in large supply and sell fairly well at a low price. There has been so much rain recently that it is hard to pick this flower and get it to market in good condition. All outdoor stock has had a little more rain than was necessary. Carnations are still coming in good quantities. The quality is good for the time of year and they are bringing satisfactory prices. The white ones are especially in demand. Roses continue in good supply, with quality fair. American Beauties are coming especially well. They are being cut from new stock and the supply is increasing every day. White roses are scarce when it comes to good quality. Kaiserins are taking the lead.

Convention Preparations.

The regular monthly meeting of the Cincinnati Florists' Society was held at the Zoo, Saturday afternoon, July 10, being called to order at 4 p. m. by President J. A. Peterson. There were a large number of members present and the meeting was a lively and enthusiastic one. The various committees made satisfactory reports, and the way in which the details for the entertainment of the S. A. F. convention in August are being worked out is decidedly pleasing to the members. Barring a few minor matters, all is in readiness, and it only remains for the arrival of the first delegation to put the machinery into motion.

THE BARTELDES SEED CO.

DENVER, COLO.

Descriptive wholesale price list now ready

The Sinton hotel has been selected as headquarters for the Cincinnati Florists' Society during the convention. This is the best hotel in the city and one of the best in the middle west. This city is fortunate in the way of hotels, having plenty of them, and you can get accommodations at whatever price you want to pay.

Various Notes.

Frank Dellar reports having the florists' baseball team well in hand. It is a mighty good team, too, as can be judged by their having played eight games and won them all. The boys are devoting a lot of time to practice and will be ready to put up the game of their life. Any visiting team that can beat them will know they have been in a ball game. Don't overlook the fact that some nice prizes are going to be offered for the ball game and they will be well worth winning.

It was with sincere regret that we learned of the death of Herbert Heller, which occurred at New Castle, Ind., Friday, July 9. He was a man of the best type, one of the kind who make friends on all sides and whose sterling character holds them. He was a frequent visitor in this city and we about considered him one of the Cincinnati florists. His death is a great loss to the craft, and it is especially sad that he had to be called so early in life.

Vacations are the order of the day and everyone who can possibly do so is going away now, so as to be at home during the convention. The last to announce their departure are Geo. Magrie and Wm. Gardener. They will leave July 24 for London, Canada.

Ed. Winterson was in town July 11 and 12 looking over the sports situation. He visited the wholesale district Monday morning. He expressed himself as well pleased at the outlook for bowling and shooting.

Other visitors were D. Honaker, Lexington, Ky.; O. C. Heberling, Georgetown, Ky., and Ollie Murphy, who was home for a short visit with his folks. He is now with the Ponce de Leon Floral Co., Atlanta. G. Reising, from L. Baumann & Co., Chicago, was also in town.

GALAX — FANCY FERNS

Mention The Review when you write.

DE HAVEN, PA.

The United States Floral Co., of Pittsburg, Pa., has been incorporated under the laws of Delaware, with an authorized capital of $325,000. The corporation has taken over the cut flower growing establishment formerly operated here by A. T. Lorch & Co., and purposes to largely extend the plant through the sale of 2,000 shares of its treasury stock of a par value of $50 per share.

A. T. Lorch is president of the United States Floral Co. C. C. Hofmeister and George F. Hofmeister, both formerly partners in A. T. Lorch & Co., are respectively vice-president and secretary and treasurer. Among the directors is P. J. Demas, the Pittsburg wholesale florist.

In offering its stock for sale a circular has been issued in which it is said: "Our present plant, consisting of five immense greenhouses, is modern in every respect and in first-class condition and ably managed by our Mr. A. T. Lorch. Property is amply insured by hail, fire and boiler insurance. Pittsburg is one of the largest cut flower purchasing cities in the country and the florists do not receive enough flowers from the local growers to meet the demand, but must buy stock daily from Chicago and New York growers. 'Hard times' do not affect our business and we are not depending on local trade entirely, for our products can be safely shipped 1,000 miles and our location and shipping facilities are unexcelled. Cut flowers are a necessity—not a luxury—and were our production fifty times as large as at present, we could dispose of every flower at a profit. Our products are protected by a special 'trade-mark' and no laws of any kind (present or future) can affect our business or depreciate the value of the investment."

MILWAUKEE.

The Market.

Last week witnessed a considerable change in market conditions. All indoor stock which did not receive proper attention during the spring rush is now played out. Any good stock last week found ready sale at reasonable prices. There was also a supply of good sweet peas and Harrisii lilies which were used up quickly. There is still a quantity of poor stock coming in which cannot be moved to any advantage; with no asters in the market yet, and peonies all gone, roses, carnations and lilies will be the main factor for a while.

Various Notes.

A few pleasant hours were spent at Brown Deer, July 11, witnessing the ball game between the employees of the Holton & Hunkel Co. greenhouse force and those of the wholesale house, which resulted in the greenhouse men coming off with first honors. The boys from the city played a good game and took their defeat with good nature, saying "We were second best anyhow."

At the C. C. Pollworth Co. greenhouses one can see a bench of Golden Glow chrysanthemums in bloom. The flowers are of good size, considering the time of the year, and they report they sell them as fast as they are cut.

Will Zimmerman, Fifth and Grand avenue, says he sold a good many red, white and blue bouquets, July 4, made up of Harrisii, larkspur and red carnations. A window display in the same line no doubt helped to swell the sales.

An interesting double event took place Tuesday, July 13, at the residence of Wm. Edlefsen. At 3 o'clock the marriage of Miss Valeria Edlefsen and Richard Eilmann took place, followed by the celebration of the fortieth wedding anniversary of Mr. and Mrs. Wm. Edlefsen. Only members of both families were present. Both of the young people have hosts of friends, who wish them a happy and prosperous future. Although the young couple left at 6 p. m. on their wedding trip, the guests remained and made merry among the plants and flowers, which were tastefully arranged about the rooms.

Geo. Garland and party, and Chas. McKellar and party, Chicago, came up in their autos to admire our beautiful city.

Walter Halliday, chief at the wholesale house of the C. C. Pollworth Co., is spending his vacation at Mt. Clemens, Mich.

Other visitors who called were Paul Zoellner, La Crosse, Wis.; Louis Turner, Kenosha, Wis.; James Mathewson and son, Sheboygan, Wis. E. O.

WHOLESALE FLORISTS

1619-21 Ranstead St., PHILADELPHIA, PA.

Mention The Review when you write.

PHILADELPHIA.

The Rising Eastern Market.

Business is dull; conditions have changed little during the week ending July 14. The quantity of good flowers coming into town is small. The demand is light, both out of and in the city. Easter lilies continue an important factor in the quality class; they sell, but not in proportion to receipts. The demand for good roses is better; Kaiserins especially enjoy favor. My Maryland is a good second. Beauties go fairly. Carnations are hard to obtain; even white have deteriorated. There is no special demand for them. Asters are increasing in numbers. The bulk of the receipts are poor. The good ones sell. Gladioli are in demand, America taking the lead. Cattleyas lag. Valley goes fairly and receipts are moderate.

The only active green is fine adiantum, although some Asparagus plumosus sprays are marketed. The severe drought has cut down the production of outdoor flowers, but still there are too many for market requirements. Achillea, pyrethrum and candytuft are disposed of in some fashion at low figures.

A New Store.

Robert Crawford, Jr., the successful Eleventh street florist, about October 1 will open a new store on Market street, above Fifty-second street. William A. Crawford will be in charge. This store is one of three erected by Jacob Becker on the site of his former greenhouses and show room. It will have a greenhouse 16x90 in the rear and will be fitted up in first-class style. Mr. Crawford is also planning alterations in his store at 233 South Eleventh street. The Lord & Burnham Co. has the contract for remodeling the greenhouses, which will be turned into a conservatory with curved glass roof.

A Visit to Joseph Heacock.

Thomas Cartledge, beloved by us all, frequently called the attention of young growers seeking his advice to the systematic manner in which Joseph Heacock's greenhouses at Wyncote were laid out. He pointed out the benefits derived from their position on the southern slope of the hill, their compactness, and the excellent heating arrangements. What was then true of Joseph Heacock's place is equally true of his company's plant today, and it is no small feat for a grower to be able to keep abreast of the times for a couple of decades in these days of rapid progress. Thoroughness is the keynote of Mr. Heacock's business success; what he does he does well. He aims to produce the best plants and flowers in quantity, and no one visiting his place today can deny that he accomplishes his aim.

The latest improvements have practically placed his entire range, one of the largest about Philadelphia, under one roof. Partitions and open spaces between the house have disappeared, longer roof bars and posts under the gutters completing the transformation. Palms, roses, carnations and orchids are all grown well. In each case the best variety in its class is specialized. In palms, kentias and arecas are leaders, but cocos also is grown; in roses, Killarney, with its white sister, My Maryland, and Richmond; in carnations, Dorothy Gordon, considered the rose-pink variety of greatest merit; in orchids, cattleyas and Cypripedium insigne.

The palms are the most important feature of the place; they are from seeds sown there, and grown as well as it is possible to grow them. The most important departure in the method of growing kentias is the substitution of the tub for the pot in all sizes above 6-inch. This substitution was decided upon after a comparative test between two blocks of Kentia Belmoreana of the same age and size. One lot was shifted into 7-inch pots, the other into 7-inch tubs. The latter showed stronger growth after two months' trial and it was confidently predicted that the improvement would be even more marked before the plants were ready for marketing or shifting. The effects of this change are of interest. Injury to plants through drying out will be

less frequent; tubs cannot fall off when being carried to and from a decoration; breakage will be eliminated. While the additional cost of the tubs is an item, it is confidently predicted that the more rapid growth will counterbalance this expense. The larger and the medium and smaller sizes of the kentia are well represented in the Heacock stock. A feature is the seed range set over the pipes on the north side of the house. This idea of utilizing space is further demonstrated by a shelf on the south side of another house overhanging the pipes, which is filled with seedling Cocos Weddelliana. Each seed is sown singly in a single deep pot, a system said to be universally practiced by successful growers of this beautiful palm.

A feature of the rose houses is the carrying over of a 200-foot house of Killarney for another year. This is a change in the usual custom practiced here. All replant young stock each season. The young stock of Killarney, as well as of White Killarney, Richmond and Maryland, is all planted and growing vigorously. Tables are preferred to solid beds as a rule.

Dorothy Gordon stands almost unrivaled in the carnation section. More space than ever before will be devoted to carnations this year, as next spring will witness Dorothy Gordon's coming-out, an event of no small importance at Wyncote, requiring careful forethought to secure the best stock. Mr. Heacock feels, as does every conscientious disseminator of new varieties, that however well a variety may do with him, no pains must be spared to insure its prospering under many widely varying conditions.

The orchid section shows marked expansion. The house devoted to Cypripedium insigne, a house that has but a single rival in this part of the country, is supplemented by a great staging completely filled with cattleyas, something like 7,000 I think Mr. Heacock said. In this arrangement is free circulation of air; a board on the south side close to the ground lifts with a hinge, starting the air going around. Each row of orchids is set on a board, circulation being insured by spaces between each row of boards and plants. These rows rise slightly one above the other to the back nearest the ventilator. The fresh importation was full of promise. Some C. gigas and C. Harrisonii in bloom are beautiful.

The earnest sincerity of the head of the company is sufficient assurance that thoroughness and progress will continue to be the watchword at Wyncote.

Various Notes.

Edward Reid sailed July 9 on the Georgia, of the Merchants and Mariners' line, from this city for Savannah, Ga. Mr. Reid will remain two or three weeks in the south.

Godfrey Aschmann has the sympathy of his many friends in the death of his wife, which occurred July 10.

Charles Schoenhut, of Buffalo, N. Y., has been calling on his friends in this city.

J. Stephenson, of Oak Lane, is contemplating building this season.

Mr. Nunnally, Jr., of the Nunnally Co., Atlanta, Ga., had a pleasant visit here a few days ago.

John R. Andre has decided to carry on the rose growing business successfully established by his father, the late John E. Andre, at Doylestown, Pa.

The Henry F. Michell Co. is making further improvements in its new store at 518 Market street. A spiral stairway will run up to the fifth floor, saving valuable

COLUMBUS, OHIO.

The Market.

Trade has been rather quiet here for the last two weeks. There have been a few weddings and several funerals, however, that used up a good quantity of stock. There is not a great deal of stock coming in at present. Carnations are showing the effects of warm weather, and not many are coming in, but good stock is generally cleaned up daily. There are some good roses coming in now, mostly Maids from stock that was dried off early in the season. Sweet peas are plentiful, and not much in demand. There are still some longiflorum lilies coming in, and they find a ready sale. There are quantities of snapdragons, but the demand is light for that kind of stock in this market.

Various Notes.

The picnic committee reports everything moving nicely for July 21, and all look forward to a great outing at Buckeye Lake.

Ralph Strader, of the Livingston Seed Co., was married last week to Miss Roach, of Bullit Park.

C. A. Roth and wife are away on their vacation, and are going west as far as the Pacific coast.

Ben Flynn again is with Graff Bros. They say Will Graff didn't stop to count flowers last week, but just put in a vaseful for a dozen. It was a big,

bouncing boy that caused this liberality.

John R. Helenthal was taken to the hospital July 8 with appendicitis, but they think he will get along without an operation. J. M.

NEW YORK.

The Market.

Ever since the club's outing, July 1, we have had the most perfect summer weather, the thermometer seldom going above 75 degrees in the day, with the evenings delightfully cool. But this week opens with clouds, excessive humidity and a temperature of 90 degrees, and we are ready for another hot spell that will make Cincinnati seem cool and comfortable, with its electric fans in every room and its chilly suburbs on the hilltops.

The supply of roses and carnations is now diminishing rapidly. In fact, except gladioli and other outdoor stock, there is but little offered for sale, and yet, with "absolutely no business," as a Twenty-eighth street wholesaler puts it, prices remain about the same. Lilies, however, have risen from the slough of despond and are again back where they belong. Notice of the summer shipments of gladioli from the local growers has reached the wholesale market, July 15 being the allotted date to begin. This will reduce the value, as usual, to 50 cents per hundred.

Apart from funeral work, there is little call for flowers, and the next five or six weeks will have to be accepted philosophically as the molting season.

Carnations look good on arrival and go to sleep without delay. Of iris, orchids and gardenias the supply is quite able to meet any possible demand. After the convention we will come to life again and the coming season is big with promise.

The Sweet Pea Convention.

The final meeting of the National Sweet Pea Society's convention was held July 8. Resolutions were read, embodying the gratitude of its members and votes of thanks to the officials of the National Museum for the exhibition room and its facilities and the many courtesies of the officials. The exhibits maintained their freshness and beauty to the close. The public attended in large numbers and the metropolitan dailies gave splendid notices.

It was Joseph and not W. A. Manda that made the orchid exhibit at the show.

The callas in yellow and pink, exhibited by John Lewis Childs, were a decided surprise to many and a center of attraction always.

Prof. Craig, browned and healthful from his summer outing at Narragansett, made an ideal chairman and toastmaster and was the life of the society to its adjournment.

Harry Bunyard may well be proud of his pet child and can congratulate himself upon the splendid encouragement given him by the exhibitors and the press.

Maurice Fuld, secretary of the New England Dahlia Society and manager for W. W. Rawson & Co., Boston, was one of the best speakers.

The banquet, given at Kennelly's uptown hall, July 7, was an enjoyable occasion. The festivities lasted until nearly midnight. Prof. Craig was an ideal toastmaster and interesting speeches were made by Messrs. Turner, Boddington, Bunyard, Totty, Fuld, Clucas, Duckham, Sim, Zvolanek, Waite, and, in fact, everyone present had something encouraging to say of the new society and its energetic founders. One enthusiast drifted into poesy in his congratulations.

Various Notes.

G. W. Crawbuck, manager of the Greater New York Florists' Association, says that last week the directors and officers of the association visited their growers in Jersey, from the Oranges to Morristown, in a touring car. D. Y. Mellis, J. V. Phillips and Hugo Jahn, the Brooklyn retailers, were in the party and everybody was elated with the wonderful showing of this prolific territory.

The Pierson U-Bar Co. has the contract for the houses in Homewood cemetery, Pittsburg, Pa., where Mr. Allen is superintendent.

Philadelphia, by the hot water forced circulation method, with mechanical draft, so the low grade of buckwheat coal can be used. The construction is on the same lines as that of the Pierson system at Scarboro.

John J. Coan, manager of the Growers' Cut Flower Co., reports the departure of the president of the company, Jacob Hauk, of Bloomfield, N. J., for a six weeks' visit in Holland and Germany. A full meeting of the directors last week found the business to date entirely satisfactory, the management efficient and the prospects for fall and winter most encouraging.

Emil Schloss and family are summering in the Catskills. Arthur Schloss and wife and the prize baby are at Greenwood Lake. The firm will have its usual exhibit at the Cincinnati convention.

B. Rosens is prouder of his boy's two first prizes at the outing than of his big year's shipments of wild smilax and the many happy weddings he has supplied with decorative material.

Mr. Hanfling, of Russin & Hanfling, is in Europe for a six weeks' trip through France and Germany.

Charles Millang's headquarters are now on the ground floor of the Coogan building.

Leon G. Wertheimer and family are summering at Averne-by-the-Sea. Sidney B. Wertheimer returned from his European trip on the K. Princess Cecilie Wednesday, July 7, after visiting France and Germany, Baden-Baden and Switzerland. The firm will make its usual display at the S. A. F. convention and will have some excellent novelties as a result of Mr. Wertheimer's trip.

L. L. Moore, of Chatham, son of the Bridesmaid pioneer, is back from Cuba, after over a year of civil engineering in the south.

The Greek florists' outing occurs July 29, at Wetzel's Point, L. I., via Steamer Isabel from East Thirty-first street. Efficient management, a strong fraternal union and novelties in the games of ancient and modern Athens will draw a big crowd. Messrs. Nicholas, Cotsonas, Lecakes, Fellouris and many other well-known men in the Greek wholesale and retail floricultural field will be in evidence.

The wholesale houses are all closing at 3 p. m. during July and August. There are exceptions to every rule, but few to this one. Even after 1 p. m. there is seldom a buyer seen on the street. There will be no general waking before September. The wholesalers will come back from the Cincinnati convention rested and inspired. A goodly lot are going. In fact, there is a carful already and we will not be surprised to see it duplicated. Send your names at once to Secretary John Young and book your berths. The New York bowlers are practicing every Tuesday evening and will have a good team as usual.

Charles J. Hewson, of Buffalo, was a visitor last week and is a charter member of the Sweet Pea Society. He says the general business in Buffalo is excellent. He is an expert sweet pea and carnation grower.

George E. Baldwin, of Carrillo & Baldwin, Secaucus, N. J., sailed on the Lucania July 7 to spend six weeks in Europe, on business and pleasure.

A visit now to Carlton Hill, N. J., discloses the completion of the new orchid houses of the Julius Roehrs Co., the firm now having 50,000 square feet exclusively devoted to these flowers. The list includes many hundreds of varieties. There will be a fine exhibit of these, and palms, bay trees, evergreens, etc., at the Cincinnati convention. Julius Roehrs, Jr., is erecting a handsome home on the property and close to the old homestead. Julius Roehrs, Sr., is still traveling with Mrs. Roehrs and family in Europe and will not return before September.

R. T. Brown, manager of the Cottage Gardens Co., leaves next week for Europe on a business trip that involves some large importations of evergreens and general nursery stock this fall.

Florists' Review
When Writing Advertisers

New York, the munificent gift of Mrs. Sage, have been discovered.

Peter F. McKenney's new store, at the corner of Fifth avenue and Forty-second street, and close to Thomas Young's and Wadley & Smythe's handsome places, is a model of multum in parvo and a good center for a fine family trade. Some call it the place of mirrors, but Mr. McKenney himself calls it the little flower shop around the corner.

Bobbink & Atkins have done a tremendous nursery business this spring. They have over 100,000 square feet of glass devoted to florists' plants, especially ferns and palms, and 200 acres in nursery stock. They will have a fine showing at the Cincinnati convention.

J. AUSTIN SHAW.

MERTENSIA VIRGINICA.

A handsome border plant is Mertensia Virginica, the Virginian cowslip, tree lungwort, or blue bell, and one worthy of more extended cultivation. It is not one which is so much seen in English gardens as Mertensia Sibirica, and it lacks to some degree the beauty of the latter, says a writer in the Gardeners' Magazine, yet its good habit of growth, from a foot to two feet high, and its racemes of showy, blue-purple flowers, each about an inch long, make it a good plant for the mixed border of herbaceous flowers, or for the choicer parts of the wild garden. It is a hardy plant, and to see it in perfection should be cultivated in moist parts of the garden. In its own lands it affects the neighborhood of streams and low meadows, a liking which points to the desirability of giving it a situation not too dry, if we wish to see it at its best. It is increased by seeds or by division. The name of M. Virginica is so firmly fixed that it will be difficult to supersede by that of M. pulmonarioides, now recognized as the correct one.

Vegetable Forcing.

RADISHES UNDER GLASS.

A Profitable Crop.

There is probably no hothouse vegetable more attractive or beautiful than well grown Scarlet Globe radishes. They are also a paying crop and the easiest of all vegetables to grow. The Scarlet Globe variety is considered the best by most growers, but some White Tips are also forced.

For forcing, one should purchase the best select stock seed and sift it in a wire cloth sieve, with meshes just large enough to let all the smallest seed through, while keeping the good seed above. The seed that is small and imperfect does not make good radishes and should be thrown away, so as not to take up space on the bench which might as well produce good, salable radishes. Where the seed is sifted and sorted in this way, about all the radishes will come on at once and be pulled at one time, so that a part of the bench can be stripped each day, promptly spaded over and replanted without an hour's delay. On the other hand, if the seed is not sorted, a part of the radishes will not make good, round, salable roots, but will be tough and misshapen, and others will be slow to mature, occupying the bench that should be replanted and thus causing a double loss.

Planting the Seed.

The seeds are planted in rows four inches apart and about an inch and a half apart in the rows. They may be planted double thick and thinned out later, so as to make sure of getting a good stand, but the greatest fault with most growers is getting them too thick, so that it takes them much longer to mature and they do not make as good radishes. Thus the thick planting causes a loss instead of a gain.

I prefer to plant the seed about as I want the radishes to grow, and by covering carefully and very thinly I get them to come up so evenly that they do not need thinning out. I mark the rows across the bench by pressing a lath down gently, on edge, into the soft soil to a depth of about three-eighths of an inch. To plant the seed right takes time and patience, but it saves more time in thinning out. After the seed is planted I go over the beds, covering the seed by running my fingers between the rows, thus plowing the seed rows full of soil.

Moisture and Temperature.

If the soil is moist it will not need watering, but if dry, wet it well and then use no more until needed, which will not be for several days. If kept too wet they grow up too tall and spindly at first, and if too warm they will do the same, making inferior quality. The bed will dry out first around the edges, and is therefore apt to be overwatered in the center or kept too dry around the sides.

When the seeds are all up they should be gone over immediately, and thinned where needed, leaving about nine or ten standing to every foot of row. They should be kept cooler and drier just at this time than at any other time, so as to keep them dwarf and make nice, round roots, instead of longer ones and larger tops. The night temperature should be 40 to 45 degrees the first ten days after planting and then increased to 50 degrees. On bright days the temperature should run about 15 degrees higher.

Ventilation is important and should be given each day. Watering, when necessary, should be done early on a bright day and when ventilation is good, so as to dry off before night.

Greenfly and Fungus.

Greenfly is about the only insect that injures them, and damping off, a fungus, is the only disease to be dreaded. When this is allowed to start, by being careless about keeping the foliage wet, it will spread rapidly and kill off large patches of plants. The remedy for it is to keep the foliage drier and ventilate freely. The aphis, or greenfly, is kept down by fumigating.

The radishes should be ready to pull in five weeks from planting the seed, if the weather is favorable. Sometimes, in spring, they make it in four weeks, and in winter it sometimes takes six weeks. They should not be pulled too small. Leave them until as large as hickory nuts or larger. Ten will then make a bunch, while fourteen will be necessary if too small.

Bunching and Packing.

Before beginning to bunch them, it is a good plan to have the twine cut in one-foot lengths by winding it around the end of a six-inch board and cutting the twine on one edge of the board. Carry these bunches of twine to the house or tie them to a button on the vest. In pulling, hunt them with one hand, holding them in the other, until a bunch is pulled; then tie them before laying them down. Gather the bunches and stack them up before the soil dries on them, having the roots all one way, and wash with the hose. Then stand them up on a clean bench in the shed, roots down, so that the water will drain out of the leaves, and dry them off.

Later they are packed in boxes, laying them down, six to ten dozen bunches per box. For shipping, the boxes should be lined with newspapers. Orange boxes are excellent, holding eight dozen nicely. This is the standard package on the Chicago market, for radishes.

The prices range from 40 cents to 80 cents per dozen bunches. An ordinary greenhouse bench, 5x100 feet, would have 300 rows across it, with about four bunches per row, but if they average only three bunches per row, that would be seventy-five dozen bunches, which, at 60 cents per dozen, would amount to $45 every five weeks. Many other crops will not pay as well. A little well rotted manure should be turned into the soil for each crop.

1116 Walnut Street

Bell Telephone 213 Grand

Will carefully execute orders for Kansas City and any town in Missouri or Kansas.

EXCHANGE ORDERS.

When a florist sends an order to a florist in another city to be executed there, is it customary that a trade discount be allowed, and if so, what per cent? S. F. C.

Unless the florist who sends the order states in the order that it is to cost him so much net, it would be understood that he was to receive a trade discount, generally twenty per cent. Consequently, if Jones wires Smith to send "ten dollar wreath" to the Robinson funeral, Jones expects to get a bill for $10 less twenty per cent, but if he says to send "Robinson funeral wreath ten dollars net" he expects to pay Smith the full amount and looks to his customer for his own profit.

PROVIDENCE, R. I.

Trade Conditions.

Bargain sales of sweet peas, 10 cents for bunches of twenty-five, offered by dry goods, department and drug stores, have been the feature of the week.

In the main, flowers have been rather scarce and poor. There is practically nothing in the market but roses, carnations and sweet peas, and none of these are worth bragging about. Social work is over and about all that keeps the retailers from spending their time sleeping or reading the papers is an occasional funeral order.

With the Societies.

The regular monthly meeting of the Florists' and Gardeners' Club of Rhode Island will be held at the club rooms, 96 Westminster street, on Monday evening, July 19, when the committee on outing will have a report and arrangements will be made for the summer jollification.

The Rhode Island Horticultural Society members, to the number of nearly thirty, held their annual summer outing at Wallum pond, July 8. The party took the electric car early in the morning and arriving at the pond, explored its borders with the result that several rare specimens of plants were found.

Secretary Dunn and William Williams, of the State Board of Agriculture, accompanied by Prof. A. E. Stene, of the Agricultural College, and City Forester Alex. H. Jonson, went to Boston July 9 for the

purpose of witnessing the methods employed there in exterminating the gypsy moth, elm beetle and other pests.

Various Notes.

Roaldo F. Colwell, of Barrington, and a member of the Florists' and Gardeners' Club, had a narrow escape from serious if not fatal injury on the night of July 9. He was returning to his home from this city, when the electric car on which he was a passenger jumped the curve and was overturned. The motorman was killed and everyone on the car more or less shaken up and hurt. Mr. Colwell was fortunate in landing on his feet as he was thrown from the car and was one of the least injured of any.

James B. Canning and his bride arrived home July 8 from their honeymoon.

Timothy L. O'Connor, accompanied by his son and daughter, left July 6 on a two weeks' automobile trip through Massachusetts, New Hampshire and Vermont. They will spend some time in the White Mountains.

William Hay has just completed a propagating house, 20x150 feet, on his place in Arlington.

John A. Macrae intends putting his new house now under construction entirely to asparagus, both plumosus and Sprengeri.

H. Howard Pepper has his new rose gardens at 80 Congress avenue laid out and is advertising public inspections.

Cornelius Hasswell, with Aitken, of Springfield, Mass., has been spending a portion of his vacation hereabouts.

Frederick Deitz has just purchased a lot on Louisa street and will begin the erection of a greenhouse, 16x60 feet, with concrete sides.

Walter S. Sword, of Valley Falls, has been drawn for jury duty in the Superior Court.

M. J. Butler & Son, Newport, have been granted a discharge in bankruptcy by Judge Arthur L. Brown, of the United States Court for the District of Rhode Island.

David P. Morris, formerly of New York, is now with T. J. Johnston & Co., Edward Brooks proprietor.

J. F. Schellinger has two houses at Riverside devoted to fancy melons, which are well set and looking thrifty and well advanced. Another house, devoted to the latest introductions in chrysanthemums, is well along in construction.

A luncheon was given recently by Mrs. William Speer, of Newport, in honor of her daughter's engagement, which was announced last week.

The trustee under the will of Robert Hogg has sold to Toma Abbenante a property on the east side of Vinton street for $5,400. W. H. M.

ROCHESTER, N. Y.

Current Comment.

Business has settled down to the usual summer dullness. The majority of flower buyers have gone to the lake and various summer resorts, leaving the demand entirely to what funeral work comes along, and the supply is equal to all requirements. Carnations are still in evidence and, considering the time of year, are of good quality. However,

they bring poor prices and have to be jobbed off in order to prevent a glut. Sweet peas continue to pour in from all quarters, but are so poor in quality as to be unfit to offer. They are extremely short-stemmed, on account of the dry weather. It seems almost an imposition on the wholesale man to bring in such stock and expect him to dispose of it to advantage.

The Vick & Hill Co. finished planting asters the first of this week. They are much later than last year in this respect, owing to dry weather and high winds, which caused them to give up planting entirely for a time. Six acres have been added to the aster section this season, this being found necessary owing to the phenomenal trade this firm experienced last year. H. B. S.

Seed Trade News.

AMERICAN SEED TRADE ASSOCIATION.

Pres., J. C. Robinson, Waterloo, Neb.; First Vice-pres., M. H. Duryea, New York; Sec'y and Treas., C. E. Kendel, Cleveland, O.

C. W. Crossman, of Crossman Bros., Rochester, N. Y., will spend the latter half of July on his annual recreative trip.

H. C. Green, Kearney, Neb., reports three days of fine rain, without hail or wind, and seed crops in excellent shape.

Frank B. White, of White's Class Advertising Co., has decided to ally his business with that of some other advertising agency.

W. W. Barnard, Chicago, is convalescing from his recent illness, but it will be some time before he will be able to attend to business.

The C. W. Gurney Seed Co., Yankton, S. D., has begun work on a new warehouse, 72x76 feet, two stories and basement, of brick and concrete. They expect to move in October 1.

Charles Heath, of the Albert Dickinson Co., says the bean is the national vegetable of America and points to the fact of the large importations that show the demand is not met by the home production. For instance, the last boat from Marseilles, France, had on board 9,186 bags of beans.

As of interest to the seed trade it may be noted that in Indiana the yield of peas per acre, as grown by the canners, has been below the normal. The packing season there is ended, the output being estimated by the Grafton Johnson Canneries at Greenwood as being fifty-five cases per acre, as against the normal output of eighty cases per acre.

W. Atlee Burpee, Philadelphia, accompanied by Mrs. Burpee and their two sons, David and W. Atlee, Jr., sailed from New York July 10 to spend six weeks in England and on the continent. One of Mr. Burpee's chief missions is to let the novelty seekers know about four new Spencer sweet peas Burpee & Co. will introduce in 1910.

Councillor Fritz von Dippe, the Quedlinburg seedsman, on the recent occasion of his silver wedding, founded a fund with 50,000 marks, the interest of which sum is to be distributed among needy widows of officials, assistants, and workmen in the service of the firm of Dippe Bros., at Quedlinburg; and a sum of 10,000 marks for the worthy poor of that town.

Advance bulb orders are coming in well; bedding will undoubtedly be heavy this fall.

The Nebraska Seed Co., Omaha, has eight men on the road calling on the trade in the western states.

Canners are predicting a short pack of corn, which would indicate a good demand for seed next year.

The stock and fixtures of Jos. A. Schindler & Co., New Orleans, in liquidation, were sold at public auction July 8.

Charles N. Page, of Des Moines, visited New York and Washington following the Niagara Falls convention.

The government crop statisticians have figured out that the condition of onions July 1 was 91.7, against 90.9 June 1 and 90.3 July 1, 1908.

Dobbie & Co., Rothesay, Scotland, one of the largest of British seed growers, of which W. Cuthbertson, president of the National Sweet Pea Society, is senior partner, are about to remove headquarters to Edinburgh.

Few seedsmen in this country make any effort to secure the advertising advantages at the big fairs, but in England the seedsmen's exhibits are a feature of such exhibitions as those of the Royal Agricultural Society.

Reports from Michigan and Wisconsin as to the progress of the pea crop indicate a wide difference of opinion as to the probable yield in the several localities. In some places a full crop is promised, while in others it is said the yield will be below the normal.

Application for the incorporation of the grain and seed business of Crumbaugh & Kuehn, formerly a partnership, at Toledo, Ohio, was made at Columbus July 8. The capital stock is $15,000 and the incorporators are E. B. W. Kuehn, E. N. Crumbaugh, W. R. Hadnett, Frank R. Moorman and H. R. Kuehn.

GIANT PANSY SEED

The KENILWORTH Strain

is unsurpassed: the immense flowers of 3½ to 4 inches are of perfect form and substance; every tint and shade is produced in striking combination and endless variation of beautiful colors and markings; it is the result of years of selection; it embraces the largest and best of English, French, German and American novelties; 1909 seed greatly improved by rich shades of brown, bronze, red and mahogany. New seed: 1000, 25c; 2000, 40c; 6000, $1; ¼ oz., $1.40; ½-oz., $2.50; oz., $5.

RAINBOW is a blend of over 50 of the latest introductions of giant pansies, of the most beautiful, gorgeous colors, blotched, striped, veined, margined, etc. With every $1.00 worth of Kenilworth strain, I will send 1000 of Rainbow free; and with other amounts in like proportion.

THE Boston seed stores all report the best and longest seed season on record.

THE Nebraska State Experiment Station, in its efforts to educate the farmers to better seeds, has just issued a bulletin, No. 110, devoted to agricultural seeds, the methods by which they are grown, and the weed seeds commonly found among them.

SPECIFIC DUTIES ON BULBS.

Senate Bill Revises Tariff.

The new tariff bill as adopted by the Senate July 8 and now in conference, with almost a certainty of its final passage without amendment to the horticultural schedules, gives the trade, not only specific duties on seeds, but specific duties on bulbs.

The rates provided in paragraph 259 are as follows:

Bulbs.	Per 1000
Tulip	$ 1.00
Narcissus	1.00
Begonia	1.00
Gloxinia	1.00
Hyacinth	2.50
Lily	5.00
Calla	5.00
Amaryllis	10.00
Astilbe clumps	2.50
Dielytra clumps	2.50
Valley pips	1.00
Valley clumps	2.50
Peony roots	10.00
Iris Kaempferi	10.00
Iris Germanica	10.00
Canna roots	10.00
Dahlia roots	10.00

All other bulbs, bulbous roots and corms which are cultivated for their flowers or foliage, 50 cents per thousand.

Orchids, palms, azaleas, and all other decorative or greenhouse plants, and cut flowers, preserved or fresh, twenty-five per centum ad valorem.

The Seed Paragraphs.

The paragraphs covering seeds are as reported in these columns at the time of their adoption by the Senate committee of the whole, as follows:

245. Beans, 45 cents per bushel of sixty pounds.

258. Seed peas, 40 cents per bushel of sixty pounds.

262. Seeds: Castor beans or seeds, 25 cents per bushel of fifty pounds; flaxseed or linseed and other oil seeds not specially provided for in this section, 25 cents per bushel of fifty-six pounds; poppy seed, 15 cents per bushel; mushroom spawn, and spinach seed, 1 cent per pound; beet, except sugar beet, carrot, corn salad, parsley, parsnip, radish, turnip and rutabaga seed, 4 cents per pound; cabbage, collard, kale and kohlrabi seed, 8 cents per pound; egg plant, and pepper seed, 20 cents per pound; seeds of all kinds not specially provided for in this section, 10 cents per pound.

664. Seeds free: Anise, canary, caraway, cardamom, cauliflower, coriander, cotton, cummin, fennel, fenugreek, hemp, hoarhound, mangel-wurzel, mustard, rape, Saint John's bread or bean, sugar beet, sorghum or sugar cane for seed; bulbs and bulbous roots, not edible and not otherwise provided for in this section; all flower and grass seeds; evergreen seeds; all the foregoing not specially provided for in this section.

The Nursery Paragraph.

The paragraph covering nursery stock, in the Senate bill, is as reported in the REVIEW of June 10, as follows:

260. Stocks, cuttings or seedlings of Myrobolan plum, Mahaleb or Mazzard cherry, Manetti multiflora and briar rose, three years old or less, $1 per thousand plants; stocks, cuttings or seedlings of pear, apple, quince and the Saint Julien plum and evergreen seedlings, three years old or less, $2 per thousand plants; rose plants, budded, grafted, or grown on their own roots, 4 cents each; stocks, cuttings and seedlings of all fruit and ornamental trees, deciduous and evergreen, shrubs and vines of all trees, shrubs, plants and vines, commonly known as nursery or greenhouse stock, not specially provided for in this section, twenty-five per centum ad valorem.

Mushroom Spawn

Read these unsolicited testimonials from a Grower and a Gardener.

From MR. THOS. JONES,
PONDTAIL NURSERY, FLEET, HANTS.
I have no hesitation in saying without exception yours is the best Spawn I have ever handled. I state this after 40 years' experience.

From MR. C. MOORE, THE GARDENS,
FRENSHAM PLACE, FARNHAM, SURREY.
I am delighted with the Mushroom Spawn. It has turned out the most productive I have ever had, the beds having yielded heavy crops for three months.

HARVESTS TO BE GREAT.

The most tremendous crop of cereals ever harvested is rapidly being made by favorable weather, according to the statisticians of the U. S. Department of Agriculture. The figures given out as of July 1 indicate banner crops of everything save winter wheat, with the corn crop for the first time exceeding three billion bushels.

Here are the figures:

Acerage.

	1909.	1908.
Winter wheat	27,871,000	30,349,000
Spring wheat	18,391,000	17,208,000
Corn	109,006,000	101,788,000
Oats	32,422,000	32,344,000
Rye	1,935,000	1,948,000
Barley	6,881,000	6,646,000

Condition.

	July 1, 1909.	July 1, 1908.	Indicated Crop.	Crop of 1908.
W. wheat	82.4	80.6	397,000,000	438,000,000
S. wheat	92.7	89.4	296,000,000	226,000,000
Corn	89.3	82.8	3,117,000,000	2,669,000,000
Oats	88.3	85.7	1,030,000,000	807,000,000
Rye	91.4	91.2	31,000,000	32,000,000
Barley	90.2	86.2	191,000,000	167,000,000

THE SIOUX CITY CONCERN.

The Sioux City Seed & Nursery Co., at Sioux City, Ia., has this year planted about 5,000 acres of corn for seed, most of it in the vicinity of Sioux City, but some in South Dakota. At Sioux City people will tell you the concern has made the town the country's leading market for seed corn, of both sweet and field varieties, shipments in carload lots being made to the New England states, to the Pacific coast and to western Canada.

The Sioux City Seed & Nursery Co. was organized in 1884 for the nursery business alone. One year later the seed business was added. The nursery department still carries on an extensive business, selling direct to the planters through agents and by catalogue, but the seed trade is exclusively a contract business with seed dealers and canners. In addition to corn, peas and beans are leading specialties. The company owns a warehouse at Alpena, from which the pea growing end is

SOCIETY OF AMERICAN FLORISTS.

What Is the Matter With Cincinnati?

The writer has just returned from a visit to Cincinnati in regard to convention matters, and after a thorough canvass of the situation is prepared to most emphatically state that both Cincinnati and the Cincinnati florists are all right.

They seem to have anticipated every difficulty and every discomfort which might arise to their visitors and have taken effective steps to avoid them. They say unanimously that Cincinnati is not so hot a place as people think, but as they have learned that the impression has gone out that exceptionally hot weather is likely to be experienced at the convention time, they are taking steps to avoid that discomfort all along the line. They have decided not to decorate the hall, which would cost $150 or $200, but instead put all of that money into extra ventilating fans, so that there will be a good breeze stirring in every part of the hall and visitors will be perfectly comfortable at all times. At the Gibson House, which will be headquarters, they have arranged that a fan will be furnished in every room, without charge, for all those who engage rooms in advance.

The president's reception will not be held in a stuffy hotel bar-room, but will take place outdoors in a park upon a hill, where the cool breezes play and where the absence of a vest or even a coat will not cause comment. After the reception there are great doings in store, but the writer is sworn to secrecy regarding them for the present.

The arrangements for bowling are admirable. The alleys are ideal and it is stated that no one can get hot there, unless from the violence of his own physical exertions or from mental anguish caused by failing to make as many strikes as he would like.

Friday will be devoted to an excursion by boat up the river to a large island maintained as an amusement park. Here, also, much secrecy was maintained and many knowing looks were exchanged among the local men regarding the stunts which were to be pulled off. I did hear accidentally, however, something about a barbecue—an ox and two or three sheep to be roasted whole—and it was stated that the ball game would be held at this place in the afternoon. Take it all in all, the prospects for a comfortable time and a most enjoyable one could not be better.

Superintendent Murphy is the busiest man ever these days. He has already sold over 10,000 feet of exhibition space and says that, the way the inquiries and applications are coming in, there is no doubt but what all available space will be taken, even though the full space is three or four times as great as at Niagara Falls. His address is William L. Murphy, 311 Main street, Cincinnati, and those who have not already arranged for exhibition space should take heed that they make application at once, or it may be too late. W. N. Rudd, Sec'y.

July 9, 1909.

BOSTON.

The Market.

Midsummer dullness now reigns in the cut flower market. Arrivals, especially of roses and carnations, are much reduced and demand is extremely light, but better than a year ago. Sweet peas are the best selling flower at present. Good blooms are, however, rather scarce, the majority being short-stemmed, owing to continued dry weather. Prices vary from 10 cents to 35 cents per hundred. Dorothy Eckford, white; Frank Dolby and Lady G. Hamilton, lavender, and Miss Willmott, orange-pink, are popular varieties. Roses are of inferior quality, with the exception of some nice Beauties, Kaiserins and Carnots. Killarneys hold up well, but Richmonds are poor.

Carnations are getting small, and so-called "fancies" would hardly have been salable six weeks ago. Prices on these vary from $2.50 per thousand to $1 per hundred. For lily of the valley there is a steady call. Lilies are not abundant. The outdoor crop of L. candidum is now over, but in addition to longiflorums there are speciosums and auratums coming in. Gladioli is being used by the retailers for window decorations. Coreopsis, gypsophila, sweet sultan and other outdoor flowers are quite plentiful. There is too much candytuft, which sells poorly. Blue cornflowers (Centaurea cyanus) are one of the best selling flowers at present, but white and pink colors are not wanted. Asters so far are short-stemmed, of the variety Queen of the Market, and make an average of $1 per hundred. There is no change to be noted in prices of green stock.

Lilium Harrisii

Now Ready for Delivery

Our first consignments have just reached us and we are now filling early orders. **Easter comes very early next year, March 27,** and a good many growers will have difficulty in getting Japan Longiflorum in flower in time, and there will be an extra demand for Harrisii in consequence.

In view of the fact that **crop is short,** we advise those who have not already placed order to lose no time doing so. Last year we were not able to meet the demand for our selected Harrisii on late orders, so we urge customers to order without delay. At present we have a good supply still to offer, and will be able to take care of early orders, but there should be no delay in ordering, as there is sure to be a scarcity of good stock, especially in the large sizes.

We offer a selected stock of the original, true Harrisii for early forcing. These bulbs have been grown from the original pure Harrisii, and will be found splendid stock for early forcing, for which purpose Harrisii is so valuable. We have had the stock inspected, and are assured it is almost absolutely pure and almost entirely free from disease. It is not stock picked up indiscriminately from different sources, but is grown from one stock, and will be found very superior to the ordinary Harrisii usually offered, both in regard to freedom from disease and purity, and not the late type now so often furnished.

6/7 inch bulbs, 350 to the case	**$ 6.00 per 100;**	**$ 55.00 per 1000**
7/9 inch bulbs, 200 to the case	**9.00 per 100:**	**85.00 per 1000**
9/11 inch bulbs, 100 to the case	**20.00 per 100;**	**180.00 per 1000**

Full case lots at 1000 rates.

Large Specimen Hydrangeas

In tubs and half barrels for July and August Flowering

We make a specialty of these plants, and have a grand lot in the finest possible condition. Our plants have never been so well budded as they are this season. Flowers are just beginning to show color.

Extra fine plants, in tubs, $3.00 each; very large specimens, in half barrels, $5.00 and $7.50 each.

F. R. PIERSON CO.

Tarrytown-on-Hudson, :: :: New York

England Nurseries, J. W. Duncan, Lord & Burnham Co., R. & J. Farquhar & Co., Daniel Iliffe, W. N. Craig and H. M. Robinson & Co. Tickets can be had only from Peter M. Miller, 32 South Market street, Boston, and none will be sold after July 24. Everything points to a record-breaking attendance, only fine weather being needed to make the annual outing a big success.

The Gardeners' and Florists' Club will hold a field day August 14 with W. B. Whittier & Co., at the Framingham nurseries, and will also visit the Eastern Nurseries, Holliston, if time permits. September 11 the Bay State Nurseries will be the rallying ground.

S. J. Goddard, wife and daughter, are enjoying their vacation at Nahant.

Lemoine Bros., of South Framingham, and Paul E. Richwagen, of Needham, are sending in some extra good Queen of the Market asters.

E. Jackson Rogean, the well known Park Street market salesman, is enjoying a vacation with Mrs. Rogean in Nova Scotia.

A. Leuthy, of Roslindale, sailed for Europe July 10 on his annual plant purchasing pilgrimage.

Mann Bros., of Randolph, are handling among other specialties fine Lilium candidum, L. auratum and Japanese irises.

Thomas Pegler has given up his greenhouse property in Wollaston, needing all his time to handle the cuts of a number of leading growers at the wholesale market.

Henry R. Comley reports business as exceedingly good for his first year in business at 6 Park street.

J. W. Duncan leaves July 27 for Seattle, to preside at the annual park superintendents' convention. He will visit many cities and points of interest, going and returning, and will be absent about a month.

E. L. Pierce, vice-president of the A. H. Hews Co., is convalescing from a rather prolonged sickness at Barre, Mass.

A party of ten from the Massachusetts Horticultural Society visited C. W. Parker's estate at Marblehead, July 2, and were generously entertained. The committee visited Weld Gardens, Brookline, where Duncan Finlayson has charge, July 6, and found everything in fine shape, herbaceous flowers, rambler roses and grapes under glass being especially good.

Some of the leading retailers are now closing earlier. Window decorations include quantities of aquatics, gladioli, centaureas and a variety of hardy perennials. Roses and carnations are taking a temporary back seat.

William Spillsbury, the single violet specialist, is marketing large quantities of tomatoes, which are a grand crop with him this season.

At the seed stores all reports are that the seed trade has been a fine one, and advance bulb orders indicate prosperous fall trade.

William J. Thurston, manager at Park Street market, starts on his vacation July 17.

A. H. Hews & Co., of North Cambridge, report summer business as unusually good, the demand for pots being a vast improvement over that of a year ago.

The Boston Sunday Herald of July 11 had a full page illustrated article on the Arnold Arboretum, and appreciative of the great work done there by Prof. C. S. Sargent and Jackson Dawson.

I hope the newly organized National Sweet Pea Society will not be long in holding an exhibition in Boston. A

Rawson's Sweet Peas

were awarded 14 prizes at the Exhibition of the National Sweet Pea Society of America in 1909. We solicit correspondence upon the newer introductions and put our knowledge at the disposal of every florist in America.

ORIGINATOR'S

Winter-flowering Sweet Pea Seed

PART OF NEW CROP WILL BE READY SOON

Older Varieties

Christmas Pink, Florence Denzer, white, two well-known commercial varieties. **Watchung,** pure white, the earliest; **Mrs. Alex. Wallace,** true lavender; **Mrs. F. J. Dolansky,** soft pink; **Mrs. Wm. Sim,** salmon; **Mrs. Chas. H. Totty,** sky blue, $3.00 lb.; **Le Marquis,** violet blue; **Wm. J. Stewart,** blue.

Price, 1 oz., 30c; 2 oz., 50c; ¼ lb., 75c; lb., $2.00.

Introduction 1908

Mrs. Geo. Lewis, pure white, wavy; **Greenbrook,** white, touched with lavender; **Mrs. J. F. Hannan,** dark pink; **Helen M. Gould,** marbled; **Mrs. W. W. Smalley,** light satin pink.

Price, 1 oz., 50c; 2 oz., 75c; lb., $5.00.

All the foregoing varieties have been grown all over the world, and have proved to be the best Sweet Peas for any commercial grower under glass.

All my original Winter Sweet Pea Seed must bear this trade-mark as a guaranty to be strictly winter-flowering. Don't accept any without.

Novelties 1909

Wallacea, true lavender when fully open, the same color as Mrs. Wallace, but much larger and open, wavy form; **Governor Fort,** grand flower, salmon pink, two shades darker than the well-known Mrs. Sim, and larger than Gladys Unwin; **Pink Beauty,** dark pink, selfs, very large wavy flower; **Mrs. Zvolanek,** white, blue variegated; **Helen Keller,** white, pink variegated. These two latter varieties may be described as variegated Denzer.

Price, trial packet, 50c; $1.00 per oz.

Snow Queen, owing to crop failure will be introduced 1910.

Last year I guaranteed my Sweet Peas to be 96% winter-flowering, but the average has been almost 100%

splendid show and big attendance of the public is certain, even in July.

Daniel Iliffe has presented the Gardeners' and Florists' Club with two sets of quoits. These will be used at the coming picnic. W. N. CRAIG.

ALBANY, N. Y.

At a recent meeting of the Albany Florists' club, held at the establishment of the president, Frederick Z. Goldring, Slingerlands, the subject of the recent ruling of the board of education prohibiting the delivery of flowers at the public school commencements was discussed at length. The action of the board was taken because it was found that children whose parents and friends could not afford to give them flowers were generally disappointed when others were presented with handsome presents. The board, of course, cannot prevent the sending of flowers to the homes of the pupils, but says that they must not be sent to the commencement halls.

The florists claim that the ruling does injustice to the business of a number of legitimate tradesmen. President Goldring appointed the following committee to continue the crusade against the ruling: Fred A. Danker, chairman; H. G. Eyres, W. C. King, Edward F. Meaney, Alfred E. Whittle, Fred Henkes, Louis Menand, W. C. Gloeckner, Patrick Hyde and Herbert E. Whittle.

The subject of closing Saturday afternoons and at 5:30 p. m. on week days was discussed. It is proposed to have the stores and greenhouses close at these hours. The stores, however, will be open Sunday mornings until noon, for funeral work and emergency orders. The matter was left to a committee composed of Thomas Tracey, John N. Butts and A. D. Wemple.

The meeting was followed by refreshments and a social hour. The next meeting, August 5, will be held at the establishment of Fred A. Danker. The club will hold its usual outing and clambake in September. The arrangements will be in the hands of the committee which had charge a year ago.

IT gives me pleasure to renew my subscription, as I owe my success in large part to the REVIEW.—F. W. BROOKE, Ithaca, Mich.

THE ad we had in your paper the last two months certainly kept us what they call "humping," for orders came in every day and they are coming yet. I am certainly more than satisfied.—WILLIAM EHMANN, Corfu, N. Y.

PACIFIC COAST.

SPOKANE, WASH.

The Market.

Favored with a soaking rain of three days' duration, vegetation has taken new strides and bids fair to make up for the late season. Only a few days so far have been too hot for comfort. Old-timers in Spokane say that we have two seasons here—winter, and July and August.

Roses have almost retired from circulation, but light carnations are still doing business at the old stands. The red sorts are looking jaded, but Enchantress, white and Crocker are of fair quality and plentiful. Sweet peas of the Spencer strain have been fine and in good demand the last few days. Gladioli and phlox have made their appearance, as well as gypsophila, garden heliotrope, gaillardia, Shasta daisies, mignonette and snapdragon.

July has been "not so bad" so far, for the dull season, enough funeral work coming in to keep the forces in hand interested.

The usual replanting of roses is in progress, and growers are almost too busy to talk. Not much building is attempted this year.

Rose Fair.

The annual rose fair, conducted by the Parish Guild of All Saints' Cathedral, has been held at the Masonic Temple. The affair is an amateur event, but judged professionally. S. Younkin, of Hoyt Bros. Co., Mrs. H. M. Sanders and A. W. Winters, of the Armstrong store, constituted the committee of awards.

There were five premiums offered: Best single specimen of cut rose, awarded first to Ulrich Brunner, second to Frau Karl Druschki; largest number of roses grown from one garden; collection of roses containing largest number of varieties grown from one garden; best decorated table, prize awarded to decoration of one large central cut glass basket of Testout roses, with smaller baskets around it.

Appointments were good and roses fine in quality of flower, but too short-stemmed. The arrangement was not especially commendable. The most artistic arrangement of roses, awarded first prize, was a tub hat suspended from a chandelier by a pink ribbon, the hat filled with Druschki roses; the second prize going to a brass jardiniere of Jacq. roses.

Some good specimens were shown, but they suffered from poor care and indifferent arrangement. Moral: It pays the trade to encourage affairs of this kind, to the extent of helping to plan it and giving a critical talk to intending contestants beforehand, with a few instructions about cutting, storing and arranging the stock.

Various Notes.

A few belated orders for bedding stock are still arriving, the principal call being for geraniums, vincas, lobelias, coleus and dusty miller. Robert Tomlin, the landscape gardener, reports a few jobs still on hand.

The Spokane Florist Co. is showing in its window a display of fine gaillardias and Shasta daisies. Miss Armstrong has Spencer peas and Enchantress. The Hoyt Bros. Co. has a cork bark stump, with adiantum plants up and down one side, and white carnations and scarlet gladioli on the top and about the base on the other side. Most of the stores have outside decorations of either hanging baskets or bay trees.

We had as visitors this week: Mr. Underwood, of the Normal Hill Greenhouses, of Lewiston, Idaho; J. L. Bourne, of Moscow, Idaho; Mr. Dayton, of Storrs & Harrison Co., Painesville, O.

Mrs. W. S. Hoyt left Tuesday, July 6, for a three months' visit among relatives in New York state.

Miss Minnie K. Graham, who is such a favorite with both employees and customers of the Hoyt Bros. Co., left last week for a trip to the Philippines, sailing from San Francisco July 6. We are hoping to have her back by Christmas.

S.

SAN FRANCISCO.

The Market.

The summer dullness has arrived with a vengeance, and everything that has the appearance of trade has gone a-glimmering. Flowers are piling up in the retailers' stores and in the greenhouses of the growers, and quotations of any kind are not reliable enough to give any idea of the market.

We are, however, almost at the end of the big crops of roses and carnations, and it is safe to prophesy that within a couple of weeks flowers will be much scarcer, even if the prices do not advance much. Already the sweet peas are becoming quite short of stem and the public seems, for the first time this season, to be getting tired of them and looking for something different. Gladioli are in full bloom now and the demand for them is fair. They cost the stores from $2 to $3 per hundred. Cactus dahlias are much in favor with decorators, but as a flower to sell over the counter they are not ex-

Outdoor Summer Flowers in variety.

actly suited to the public wants. Huge vases of them, however, adorn the retailers' shops and make a splendid showing. Valley, although not in abundant supply, is plentiful enough to fill all requirements. Lilium longiflorum is away down, both in demand and price. A few Queen of the Market asters are seen, but they are not long enough in stem to attract attention.

There is so little doing, even in the funeral line, that many of the retailers are shifting and rearranging their stores preparatory to the arrival of the fall trade, which should begin to show itself as soon as the schools begin to reopen and the townspeople begin to leave the hillside and seashore for their town houses again.

Various Notes.

The opening of Chestnut street through the grounds of F. Ludemann, near the Presidio, will necessitate the removal of several new greenhouses and the transplanting of many thousands of young nursery stock.

The show of tuberous-rooted begonias is now at its height at the greenhouses of John H. Sievers and is attracting much attention from the flower-loving public.

John McLaren has a magnificent house of calceolarias at Golden Gate park. The flowering beds are now at their best and some new designs will well repay a visit.

James Miller, of East Oakland, who for several years discontinued the making of flower pots, is now actively engaged in manufacturing them again for the local trade.

D. Greuttner, of Vallejo, Cal., is in town on a few days' visit. He reports the florists' trade highly satisfactory in his neighborhood.

Geo. E. Barber, of Denver, Colo., is in town. He will remain several weeks in California. G.

ANDERSON, IND.—D. W. Leatherman has a fringed giant petunia which he intends to introduce to the trade next season.

NOTICE
To all American Nurserymen and Seedsmen desiring to keep in touch with commercial horticulture in England and the continent of Europe: Your best means of doing this is to take in the
Horticultural Advertiser
Our circulation covers the whole trade in Great Britain and the cream of the European firms. Impartial reports of all novelties, etc. Paper free on receipt of 75 cents, covering cost of postage yearly. As the H. A. is a purely **trade** medium, applicants should, with the subscription, send a copy of their catalogue or other evidence that they belong to the nursery or seed trade.

NURSERY NEWS.

AMERICAN ASSOCIATION OF NURSERYMEN.
Officers for 1909-10: Pres., F. H. Stannard, Ottawa, Kan.; Vice-Pres., W. P. Stark, Louisiana, Mo.; Sec'y., Geo. C. Seager, Rochester, N. Y.; Treas., C. L. Yates, Rochester, N. Y.

THE western New York nurserymen would be glad to get more rain.

J. H. H. BOYD, McMinnville, Tenn., has taken over the stock of forest tree seedlings grown by Taylor Perry, Jr., at that place.

THE Southern Nurserymen's Association will hold its annual convention at Huntsville, Ala., August 18 to 20. H. B. Chase is president.

THE U. S. Department of Agriculture has issued a bulletin entitled "Paper Birch in the Northeast," which will interest nurserymen in that section.

THE tariff bill as passed by the Senate makes the duty on rose plants 4 cents each. The full text of the horticultural schedules will be found on page 36.

W. T. SPELTS, president of the Wood River Nursery Co., Wood River, Neb., is doing a large business in the western part of the state as well as in eastern Colorado and Wyoming. This concern is one of the largest in its section.

THE U. S. Board of General Appraisers has sustained another protest at the classification of evergreen seedlings for purposes of assessing customs duty. This protest was by Maltus & Ware and, as in other cases, the Ouwerkerk decision was followed.

C. S. HARRISON, of York, will as usual be a leading figure at the midsummer meeting of the Nebraska State Horticultural Society at Beatrice July 21 and 22. He is on the program for a response to the address of welcome and for a paper on evergreens.

THE government crop reporters find the condition of the peach crop July 1 lower than that of any other crop, only 50, against 54.1 a month before and 69.7 a year ago. The condition of the apple crop also was low: 54.6, against 61.4 June 1 and 57.6 a year ago.

STATE NURSERY LAWS.

Maine and Montana.

The American Association of Nurserymen, through its committee on legislation, has been making a comparative study of the nursery laws of the different states, and in so doing has collected much valuable information.

William Pitkin, as chairman of the committee, has investigated a bill passed at the last session of the legislature of the state of Maine, and does not find that it contains much of interest, or much of detriment, to members of the Nurserymen's Association. It provides that all nursery stock shipped into the state shall bear on each package a certificate of inspection, that on arrival the state inspectors may inspect if they so desire, and further, that "all agents or other parties, except growers, who desire to sell nursery stock, shall make application for an agent's license, and shall file with the state entomologist the names and addresses of nurseries or parties from which they purchase their stock. On receipt of such application, the state entomologist shall issue a license valid for one year." No license fee is demanded.

At the request of a number of western nurserymen, Mr. Pitkin secured from the attorneys of the Nurserymen's Association, Messrs. McGuire & Wood, of Rochester, N. Y., an opinion as to the validity of the Montana law, and the attorneys' opinion was in substance that the law was valid, and could not be easily and successfully attacked.

Oklahoma, Wisconsin and Pennsylvania.

E. P. Bernardin, chairman of the western committee, reported to Mr. Pitkin that it was not likely that any new legislation would be immediately enacted in Oklahoma, but that the state board having charge of such matters would give the members of the western committee a hearing and discuss with them the rules and regulations formulated by the state board, and it was expected that all matters would be gotten in satisfactory shape.

Mr. Pitkin states that he had some correspondence with a number of western people in regard to a bill introduced in the legislature of Wisconsin, which contained all kinds of foolish, unreasonable and illegal propositions. The matter was looked after principally by T. J. Ferguson, of Wauwatosa, Wis., who reported in March that it was not likely that anything would be done with the measure. "And I believe," says Mr. Pitkin, "that is its present status."

The laws of Pennsylvania provide that all nursery stock entering the state must be fumigated, and that before shipment the outside nurseryman must file with the Pennsylvania Department an affidavit which in substance obligates him to fumigate all nursery stock shipped into the state of Pennsylvania according to the prescribed formulas. In the opinion of the attorneys of the Nurserymen's Association, the law is invalid and unconstitutional, as an attempted regulation of interstate commerce.

North Dakota, California, Wyoming.

After some correspondence with parties in North Dakota relative to a bill introduced in their legislature which contained some objectionable clauses, Mr. Pitkin made some suggestions to the North Dakota people as to its unconstitutional and unreasonable provisions, and was informed in March that the bill was smothered in committee, and consequently nothing would be done on that line for the next two years.

During April Mr. Pitkin received a letter from one of the members of the Nurserymen's Association residing at Rochester, N. Y., stating that a short time previously he had shipped a few peach trees to a California customer, and had been unable to get them delivered. A regular inspection certificate was attached, and also a certificate of fumigation, but notwithstanding that the California authorities, acting through the transportation companies, would not permit delivery, and it seems that under their rules

and regulations it would be practically impossible for many of our nurserymen to ship peaches into that state.

Mr. Pitkin had some correspondence with western nurserymen, represented by E. S. Welch, of Shenandoah, Ia., relative to testing the law of Wyoming. In the opinion of the attorneys of the Nurserymen's Association, the Wyoming law has some unconstitutional provisions which might be successfully attacked.

The Excellent New York Law.

With reference to the state of New York, Mr. Pitkin refers to certain recent changes in the laws of that state and says that he is glad to report that such changes as were made were agreeable to all the interests involved. The changes were on the lines of strengthening the hands of the Department in connection with the inspection of foreign nursery stock, and the most important change in the law was the one removing the requirement of fumigation of nursery stock from other states. As the law now stands, nursery stock can be shipped into New York state without fumigation, but is subject to inspection by the Department of Agriculture after its arrival within the state. "The New York law," says Mr. Pitkin, "is one which might well be copied by other states of the Union."

KALMIA LATIFOLIA.

To be seen at its very best, Kalmia latifolia must be seen where it grows of its own free will and then it is certainly one of the most beautiful of our native shrubs and one that is destined to receive much more attention in the near future than it has in the past.

Kalmia latifolia often proves a failure when lifted and otherwise treated like Rhododendron maximum, and for that reason great care should be exercised so as to get all the roots possible with each plant and to keep the roots moist for some time after planting. Small plants, if obtainable and if planted in nursery rows, will in two years be in good condition, as far as roots go, for planting for permanency. D. M.

LOUISVILLE, KY.

The Market.

Business last week was good, owing to the big demand for funeral work. Several large funerals took place, and a lot of stock was used. Good flowers of any kind are hard to get, as we had several hard rains and outside flowers were all spoiled. Sweet peas are coming to an end. Some few asters are coming in, but it will be a week or two before there will be any quantity of them. Gladioli will arrive in a few days.

Golden Glow mums are a failure here so far. Several growers have them, but the flowers do not develop right. Still, there were several vases to be seen in the show windows, but they do not attract much attention, and sell slowly. In fact, no kind of cut flower is much in demand, as most of the society folks are out of the city, and the florists have nothing to do but make funeral work.

Carnations in the fields are doing nicely, but we may have had too much rain last week for them to continue so, though the boys are hoping for the best.

Various Notes.

Jacob Schulz has two benches of asters that look promising.

Theo. Strohecker will withdraw from the Nanz & Neuner Co., in which he is a stockholder. He has also been manager of the firm's greenhouses and nursery at St. Matthews for the last ten years. Mr. Strohecker has now formed a partnership with Al. Greishaber, and has engaged in the grocery business at St. Matthews.

The Kentucky Society of Florists will give its annual picnic July 22, at Siever's grove, on the Eighteenth street car line. The stores will be closed, and everybody will be there, as a good time is in store. Sports of all kinds will be indulged in, and the chief feature will be a great ball game. K. R.

PLEASE discontinue our classified advertisement. Last week's issue sold 8,800 plants and as we had only about 20,000 we care to sell, we think we will be liable to dispose of the balance on the orders that will still be coming along. —WARRICK BROS., Washington, Pa.

DRAINAGE FOR RAISED BENCHES

What makes the best drainage for raised benches? L. L. W.

For such crops as roses, carnations, violets and chrysanthemums no special drainage at the bottoms of benches is necessary. Sometimes a layer of straw is laid over the boards and the coarser portion of the compost placed over this, but in nine cases out of ten the more fibrous portions of loam are laid over the divisions between the bottom boards, and this makes ample drainage. C. W.

INDIANAPOLIS.

The Market.

Business for last week has been quiet; but for some funeral work and a few straggling weddings there would be nothing doing. There are quantities of good gladioli being shipped in. Roses and carnations are fair. Funeral work has cleaned up the Easter lilies, which have been coming in in good quantities. Shasta daisies are moving well. Some good asters are coming in. A number of florists report quite a little disease in their asters this year.

Various Notes.

Hartje & Elder are sending in some fine asters.

C. R. Greene and Joseph O'Brian, of A. Wiegand & Sons, are off on their vacations this week.

Mr. Knickman, with McHutchison & Co., of New York, was a caller this week.

Clarence Thomas has returned after a week's stay at Louisville.

Bertermann Bros. are installing a new 120 horse-power boiler at their East Washington street plant.

E. A. Nelson is installing cement benches.

H. W. Rieman expects to attend the convention at Cincinnati.

John Heidenreich has been busy planting chrysanthemums.

Baur & Smith have been sending in quantities of Shasta daisies. This firm has been busy planting chrysanthemums.

A. A. Warner was busy with funeral work last week.

George Wiegand suffered a painful injury July 4, which might have been serious. A small boy threw a firecracker which took part of George's mustache with it when it exploded.

Adolph Baur is proud of their new carnation, Shasta. Mr. Baur says it is a fine summer as well as winter bloomer.

The Florists' Club will have a meeting this week to make arrangements for the picnic.

Herbert Heller's many friends here were deeply grieved to hear of his death. A number of the florists from here attended the funeral. H. L. W.

Our Plants Have Value

The size of pot, the size of plant, number of leaves, guide you in the making of an order, but the excellence of the plant itself is its true worth. :: ::

None Better Grown

DETROIT.

The Market.

Stock of all sorts is entirely too plentiful for the good of the growers. Several busy spells have crept in, brought on by funeral work; otherwise things have been dull.

There was a good demand for flowers July 9 and 10, to be used in trimming autos for the big parade. Many peonies, carnations, daisies, ramblers, etc., were used.

Various Notes.

John Warncke met with an accident last week while cranking his automobile. His left arm was broken. Still he was "game," and entered Steincke's car in the auto parade, prettily decorated. Attached to the rear of the car was what they call their trailer, being a small platform on auto wheels. This was also decorated with plants and flowers, and on it was a miniature auto, in which sat two boys.

Some of the florists had to work overtime July 9, trimming autos.

Saturday, July 10, was the day set for the big automobile parade held in connection with the Glidden Tour days, July 10 to 12. It was estimated that about 1,100 cars were in line, many of them being elaborately decorated. The Bemb Floral Co. did some of the work on two of the prize winners.

A Detroit electric car, decorated by B. Schroeter, also won a prize in the above event. Mr. Schroeter was the only florist who took an active part in the parade. Not being the possessor of an auto, he was furnished one by the Cadillac people. The car was one of the touring type. On the back was mounted a large canopy, entirely covered with wistaria; the balance of the machine was also trimmed with this pretty flower, made of paper, of course. On the bonnet of the engine was mounted a large eagle. Ribbons, etc., were so used as to produce quite a pretty effect. In fact, it was later announced that had not Mr. Schroeter displayed his name on two small silk banners, he would have been given the first prize.

H. S.

AUGUSTA, GA.—The Georgia State Horticultural Society has issued, from its headquarters in this city, an announcement of its thirty-third annual meeting and exhibition, with a list of the papers to be read. The meeting will be held August 4 and 5, in the auditorium of the Hotel Georgian, at Athens, Ga. P. J. Berckmans, of this city, has for many years been president of the association, and L. A. Berckmans is treasurer. J. B. Wright, of Cairo, Ga., is secretary.

Ferns in Flats

Ready for delivery after July 15

Each flat contains 100 clumps of small plants which can be divided in 3 to 5 plants accordingly, all ready for potting.

We can furnish these ferns grown separately, each flat containing any one of the following sorts, ferns all good salable varieties:

Aspidium tsussimense,
Cyrtomium falcatum,
Pteris adiantoides,
cretica alba lineata,
cretica magnifica,
hastata,
Mayi,
Gilberti,
serrulata,
serrulata cristata,
serrulata variegata,
Wimsetti,
Mixed Varieties.

Price, $2.00 per flat.

FERNS IN FLATS.

KENTIA, 2¼-in. pots, $9.00 per 100, $75.00 per 1000. **COCOS,** 2¼-in. pots, $9.00 per 100, $75.00 per 1000.

Begonia Gloire de Lorraine

We are headquarters for this sterling plant.

This is decidedly one of the most beautiful and profitable plants introduced in many years. It attains a height of 15 to 18 inches, bears pea green foliage and is fairly smothered with a profusion of soft pink flowers. It is naturally of a compact, bushy form, and blossoms continuously from October to April, making an ideal plant for Christmas decoration. No establishment, large or small, is complete without this begonia.

From 2½-inch pots, for delivery at once. Doz., $2.00; 100, $15.00; 1000, $140.00.

JACKSONVILLE, FLA.

C. D. Mills has decided to incorporate his business, and for that purpose he has associated himself with C. L. Bragg, C. Leslie Whipp and W. W. Key, all of this city. The charter, it is said, will be applied for August 9. The name of the concern will continue to be Mills, the Florist, and the main office of the company will be located at 36 West Forsyth street. It is stated that the authorized capital stock of the corporation will be $100,000, divided into 1,000 shares of the par value of $100 each.

Mr. Mills will be the president of the company. In stating the reasons for incorporating, he said that the present business was rapidly getting too large for one person to handle properly, and after the new company was formed, it was their intention to reach out for business all over the state of Florida, as well as south Georgia. Mr. Mills has been in the florists' business in this city for the last fifteen years, starting with $500 capital and leased property. His business has grown rapidly, and besides the main greenhouses, located on Eighth street, near Main, there is a branch in Riverside, with salesrooms on Forsyth street, where the office of the new concern is to be located. In the various greenhouses owned by Mr. Mills there is a total of 30,000 feet of glass.

The other officers of the new company will be C. L. Bragg, vice-president, and C. Leslie Whipp, secretary and treasurer. Mr. Bragg will have charge of the outside work of the concern, looking after the landscape gardening feature, and otherwise having general supervision of this department. Mr. Whipp will have charge of the financial affairs of the concern and the office work. Mr. Key, who has been foreman of the greenhouses of the present company for the last five years, will hold the same position under the new firm. He is an expert grower of carnations and other hothouse products. Mr. Mills, with practically a life of experience in the business, will have general supervision over all the departments.

PLEASE discontinue our advertisements in the REVIEW. We are sold out and had to refuse orders.—A. H. CRAIG & SON, Strantham, N. H.

Godfrey Aschmann, the Araucaria King

Is More Active than Ever

Four Houses Filled with the Best. With What? Sure, with ARAUCARIAS, His Specialty

Empty houses! That won't do. What shall I plant? What is the most profitable? Listen to what your neighbor florist has to say. Mr. McGinty to George Know Nothing: "I filled a reasonable portion of my greenhouses last year with Godfrey Aschmann's Araucarias, and I tell you straight out I was only sorry I did not buy more. In two weeks, just when the demand was the biggest, my stock was nearly exhausted. This year I shall be smarter. Last week my order to Aschmann called for just double the amount. I never can lose anything on such an investment as that. Every dollar put in Araucarias yields three to four times the value while we're asleep."

We are one of the largest importers of these well-known and beautiful evergreen decorative plants, the **Araucaria Robusta Compacta, Excelsa Glauca and Excelsa.**

Florists should bear in mind that no home, garden, lawn, etc., is complete without the Araucaria; therefore, if you wish to make money, recommend the Araucaria to your customers. Introduce this noble plant to your trade. We give you a special price, and it will pay you to handle them.

Araucaria Robusta Compacta, Glauca and Excelsa. Our reputation of being one of the largest importers and shippers of this beautiful evergreen decorative plant is so well known, dating far back into the 19th century, that our name, as well as the Araucaria itself, shall never die out, and is still fresh in people's minds, same as when we first started. Why the Araucaria is so popular is because it is an ancient plant, kept by Greeks and Romans as a special favorite in their household, as a good omen.

Araucaria Robusta Compacta and Excelsa Glauca, new importation, 3 tiers, 3-year-old, $1.00, $1.25 and $1.50.

Araucaria Robusta Compacta, specimen plants, 7 to 8-in. pots, 4 to 5 years old, 3, 4 and 5 tiers, 20, 25 and 30 inches high, same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa Glauca. This is a beautiful blue variety, very graceful and beautiful. Specimen plants, 6-in., 7-in., 8-in. pots, 4 and 5 years old, 4, 5 and 6 tiers, 20, 25, 30 and 32 in. high, same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa, 3, 4 and 5 years old, 4, 5, 6 and 7 tiers, 6-in. pots, 20, 25, 30 and 35 in. high, an Elephant for only 75c; a Jumbo for $1.00 and a Holy Terror for $1.25 to $1.50.

Araucaria Excelsa, April (1909) importation, 2 to 3-year-old plants, 5, 5½ to 6-in. pots, 3, 4 and 5 tiers, 12, 14, 16 to 18 in. high, 35c, 40c, 50c, 60c to 75c.

Sago Palm, or Cycas Revoluta, 5½, 6, 7 and 8-in. pots, from 5 to 20 leaves to a plant, 10c per leaf.

Jerusalem Cherries. We offer the best, new improved variety, already laden with large, orange-colored berries, 2½-in. pots, $5.00 per 100.

Begonia Gloire de Lorraine a specialty; also own new improved strain, introduced last Xmas, is still well in the minds of florists. We have both the deep pink and the light pink variety (Lonsdale), 4-in. pots, 30c.

Kentia Belmoreana, 4-in., 18c, 20c to 25c; 6 to 7-in., 6 good leaves, 75c, $1.00, $1.25 to $1 50.

Kentia Forsteriana, 8-in. pots, made up, 1 large, 4 ft. high in center, with 3 small around, price $4.00; single plants, 6 to 7-in. pots, 30, 35, 40 to 48 in. high, $2.00, $2.50 to $3.00.

Areca Lutescens, 4-in., made up of 3 plants, 25c.

Cocos Weddelliana, 3½-in., 18 to 20 in. high, 20c to 25c; 3-in., 15 in. high, 18c.

Cannas, 2½-in., $3.00 per 100.

Geraniums, Cannas and Scarlet Sage, 4-in., $6.00 per 100.

Zinnia Elegans, mostly white, valuable to cut, 2½-in., $5.00 per 100, in bloom.

All goods must travel at purchaser's risk. Cash with order, please.

Please state if you want stock shipped in or out of pots.

NEPHROLEPIS SCHOLZELI

The New Crested Scottii Fern

NEPHROLEPIS SCHOLZELI.

This crested sport of Scottii has proven all that has been claimed for it, and it promises to become even more popular than its parent.

It is, without a doubt, the ideal crested fern; a good, quick grower, and makes a salable plant in any size from a 3-inch pot to a large specimen. A profitable fern for everybody.

Awarded the Following Honors:

Shaw Gold Medal, St. Louis Horticultural Society, November 3, 1908, for best plant of decided merit for cultivation, not previously an article of North American commerce.
Silver Medal, offered by the Society of American Florists, through the St. Louis Horticultural Society, November 3, 1908, for the most meritorious plant or flower of American origin.
Certificate of Merit, of the Horticultural Society of St. Louis, November 3, 1908.
Silver Medal, Pennsylvania Horticultural Society, Philadelphia, November 10, 1908, for best new plant exhibited.
Certificate of Merit, Massachusetts Horticultural Society, Boston, November 6, 1908.

DAYTON, OHIO.

The Market.

Business, as well as the florist, is feeling the effects of the extreme heat. The hot weather has had its usual effect on roses and carnations, as they are greatly reduced in size, but small as they are, the grower finds no trouble in disposing of them, as stock of all kinds is scarce. Prices hold up remarkably well. White and Enchantress seem to be about the only varieties of carnations obtainable. Roses are more scarce than carnations, as the weather seems to have affected them to a greater extent. About the only really desirable flowers in the market now are the longiflorums and lily of the valley. They are quite plentiful, especially the longiflorums, and are being used extensively in funeral designing, as they make the best appearance, hold up well and give better satisfaction. The indoor asters are commencing to bloom, and they will be a welcome addition to the cut flower list. Sweet peas are good this season and plentiful. Trade, taking everything into consideration, is satisfactory, but not rushing. What rest the florist can get these days is much needed.

While we are getting plenty of heat, at the same time we are receiving an abundance of rain. Consequently all crops, out of doors, are in fine condition.

Various Notes.

There is great enthusiasm among the florists of this city regarding the S. A. F. convention, and it is thought there will be a large delegation from here in attendance, as Cincinnati is only a short distance away. The Dayton florists extend a hearty welcome to all florists and friends visiting the convention to visit their plants, either on their way to, or coming from, the convention.

Vacation time has come, and several florists have taken advantage of it, while some will do so at the time of the convention.

Mrs. Elizabeth Young left last week for an extended trip to Minneapolis, Minn., where she will visit her son.

Mr. and Mrs. Wm. Ritter, Jr., have left for a six weeks' visit in New York city.

Walter G. Matthews, of Kansas City, Mo., is spending a few weeks here, visiting at the home of his father, Warren G. Matthews.

Mr. and Mrs. H. J. Davison, of Chicago, are spending their summer vacation in Dayton as the guests of Mr. and Mrs. R. G. Bartholomew.

Miss Ruby Bartholomew and Miss Amy Ewing spent the month of June in New York city, Albany, Buffalo and Niagara Falls.

The Miami Floral Co. is growing large quantities of longiflorum through the summer. This is found profitable, as the market is good.

Mrs. B. Hendrichs had some large funeral orders last week. R. A. B.

I FIND the REVIEW a cheer-up when one has the blues.—GEORGE SCHUBERT, West Hoboken, N. J.

Salvias, fine plants, 2¼-in., 1c. Must have room. Hammerschmidt & Clark, Medina, Ohio.

SEEDS.

COBURN'S SELECTED PANSY SEED.
BEST MARKET STRAIN GROWN.

Our seed is saved from about 12,000 plants, carefully selected, when in bloom, from the 500,000 we grow for our spring sales.

Each plant is carefully selected, color, size, form and substance being taken into consideration, and the proportion of each color is properly balanced.

As a result of over 25 years' work along these lines, we feel justified in claiming to have the best strain of pansies on the market, and we invite trial and comparison.

Growing our stock in this manner, we have only a limited amount of seed to spare, and in order to distribute as widely as possible, we offer it in packets of 1,000 seeds. Price $1.00 per packet (only one to each customer).
I. E. COBURN, 291 Ferry St., Everett, Mass.

GIANT PANSY SEED from a large early strain, carefully built up from a combination of the seed from the best growers of this country and Germany. This seed will compare favorably with any high priced seed on the market. $4.00 per oz.
C. F. Mahan, R. D. No. 8, Dayton, Ohio.

CYCLAMEN GIGANTEUM PERSICUM SEED, 1909 crop. I have a surplus of a few thousand seed in the following colors: deep crimson, rose, shell, white with carmine eye, and pure white, 60c per 100; $5.00 per 1000 seed.
C. F. Mahan, R. D. No. 8, Dayton, Ohio.

E. H. Hunt, 76-78 Wabash Ave., Chicago.

TRIMMING RETINOSPORAS.

Specimen plants of retinosporas are often grown so close together that in order to retain for each one its individuality, without moving them, they need some cutting back. Now, the trees will look much better when this work is done if a knife is used instead of a shears. If the knife is used judiciously, no one but the user will know of the operation, unless told of it.

Then, again, instead of throwing the cuttings away, it will probably be much better and much more profitable, to either a commercial man or a private gardener, to put the cuttings in soil in a frame. There, with attention in the matter of water and shade, they will soon take root and in two years they will make nice little plants, worth a good deal more than all the trouble it was to raise them. D. M.

SCARCITY OF MANURES.

The coming of the motorcar has had many economic issues besides those involved in its manufacture, the most important, from the gardener's point of view, being the shortage of stable manure caused by the general use of motor, in place of horse traction, says a writer in the Gardeners' Chronicle. More particularly does this apply to market gardens and nurseries within easy distance of London, which depend largely on the metropolis for supplies of manure. A few years ago there was no difficulty in procuring a hundred tons or so of fairly good stable manure from London in the course of a few days, while now one is lucky to get a couple of 10-ton truck loads after giving a week's notice, and the quality is exceedingly bad. This scarcity of good stable manure is becoming a serious matter to market gardeners and nurserymen generally, and it is hard to say what substitute as good and as cheap can be found to take its place. To firms that have been in the habit of using a thousand tons or more each year this is a grave question. There are always various chemical manures that can be used, but it has to be remembered that the cost is an important item where manure is used on a large scale, and that also all manures have two effects on land; viz.: chemical and physical. It is easy enough to be mathematically precise as to the actual amount of phosphates, etc., required by the growing crop, but the continued use of inorganic manures on many lands has the effect of leaving the soil close and stiff, and in some cases almost unworkable. Good stable manure, on the contrary, besides containing plant food, forms after decomposition the rich, black mold so common in old kitchen and market gardens. The mechanical effect, therefore, is important, and on heavy or stiff soils stable manure, with plenty of long straw in it, is a valuable means of keeping the ground open and porous.

HORTICULTURAL BOOKS

We can supply any of the following books at the prices noted, postpaid, and any other book at publishers' price.

Pronouncing Dictionary.
A list of plant names and the botanical terms most frequently met with in articles on trade topics, with the correct pronunciation for each. **35 cents**

The Florists' Manual.
By WILLIAM SCOTT. Covers the whole field of commercial floriculture. Articles are arranged alphabetically so that reference is quick and easy. It tells you just what you want to know in just the way you want to be told. **$5.00**

Commercial Violet Culture.
By B. T. GALLOWAY. An illustrated, comprehensive and complete treatise on the commercial culture, growing and marketing of violets for profit. Of interest to the amateur as well as the commercial grower. Cloth. 234 pages. **$1.50**

The Propagation of Plants.
By ANDREW S. FULLER. Illustrated with numerous engravings. Describing the process of hybridizing and crossing and also the many different modes by which cultivated plants may be propagated and multiplied. Cloth. 359 pages. **$1.50**

The Rose—Its Cultivation, Varieties, etc.
By H. B. ELLWANGER. Directions for cultivation—for planting, pruning, propagation, the treatment of diseases and insect enemies—particularly valuable for its classification. Alphabetical and descriptive list of nine hundred and fifty-six varieties. Cloth. **$1.25**

The History and Culture of Grafted Roses for Forcing.
By ALEX. MONTGOMERY, JR. The most important contribution to the modern literature of the rose. Of much interest to every rose grower and of utmost value to growers of grafted roses. Containing practical description of the process of grafting with full details of planting and culture; also directions for treatment to carry the plants a second year. **35 cents**

The Pruning Book.
By L. H. BAILEY. This is the first American work exclusively devoted to pruning. It differs from most other treatises on this subject in that the author takes particular pains to explain the principles of each operation in every detail. Specific advice is given on the pruning of the various kinds of fruits and ornamental trees, shrubs and hedges. Considerable space is devoted to the pruning and training of grape vines, both American and foreign. Cloth. 530 pages. Illustrated. **$1.50**

Handbook of Plants and General Horticulture.
By PETER HENDERSON. This new edition comprises about 50 per cent more genera than the former one, and embraces the botanical name, derivation, natural order, etc., together with a short history of the different genera, concise instructions for their propagation and culture, and all the leading local or common English names, together with a comprehensive glossary of botanical and technical terms. Plain instructions are also given for the cultivation of the principal vegetables, fruits and flowers. Cloth. **$3.00**

Henderson's Picturesque Gardens and Ornamental Gardening.
By CHARLES HENDERSON. A volume containing half-tone illustrations of the prettiest and most famous gardens and parks of the world, vividly portraying lawn, garden and landscape effects, plant and tree groupings, decorative bedding, herbaceous gardens and borders, formal gardens, lawn gardens, Italian, Japanese and English gardens, rock gardens, wild gardens, bog gardens, subtropical gardens, sunken and terrace gardens, rosariums, hardy ferneries, arches, columns, festoons, etc., picturesquely draped with vines, as well as numerous other garden embellishments. Each illustration is described and explained. Cloth with gold. **$2.50**

Greenhouse Management.
By PROF. L. R. TAFT, of Michigan Agricultural College. A manual for florists and flower lovers on the forcing of flowers, vegetables and fruits in greenhouses, and the propagation and care of house plants. It treats of all the plants commonly cultivated by florists and amateurs, and explains in a thorough manner the methods that have been found most successful in growing them. Particular attention is paid to the growing of cut flowers, the growing of fruits under glass, etc. Of special value will be the directions for treating plants when attacked by insects and fungi. The preparation of the soil, the use of various manures, composts and fertilizers, watering, ventilating and heating receive careful and minute attention. Cloth. 400 pages. **$1.50**

Handy Manual.
By J. W. JOHNSON. Illustrated with plans for greenhouse heating and ventilating, by a practical steam and hot water engineer of long experience. 125 pages. **$1.00**

How to Make Money Growing Violets.
By GEORGE SALTFORD. For men and women in towns, villages or on farms. Tells what is the best soil for violets, how to prepare it, planting, watering, cultivation, varieties, heating, fertilizers, insects, diseases, marketing, shipping, etc. Illustrated. **25 cents**

Smith's Chrysanthemum Manual.
By ELMER D. SMITH. Revised edition. A complete practical treatise, concise directions for every stage of the work of propagator and grower. The result of 22 years' experience. Fully illustrated. **40 cents**

The Chrysanthemum.
By ARTHUR HERRINGTON, formerly president of Chrysanthemum Society of America. The most complete and comprehensive work on the cultivation of the chrysanthemum that has yet been published in America. The book will be welcomed for the lucid, comprehensive, as well as the practical character of its contents. Handsomely illustrated. 168 pages, 5x7 inches. **50 cents**

Gardening for Pleasure.
By PETER HENDERSON. An illustrated guide to the amateur in the fruit, vegetable and flower garden, with full directions for the greenhouse, conservatory and window garden. Technical terms and phrases professional gardeners use in writing or speaking on matters relating to horticulture have been avoided as far as possible. 404 pages. Cloth. **$1.50**

Greenhouse Construction.
By PROF. L. R. TAFT. A complete manual on the building, heating, ventilating and arrangement of greenhouses, and the construction of hotbeds, frames and plant pits. Lucid descriptions and 118 diagrams and illustrations make every detail clear to the amateur and professional gardener and florist. Cloth. 318 pages. **$1.50**

Gardening for Profit.
By PETER HENDERSON. The standard work on market and family gardening. The successful experience of the author for more than thirty years, and his willingness to tell, as he does in this work, the secret of his success for the benefit of others, enables him to give most valuable information. The book is profusely illustrated. 376 pages. Cloth. **$1.50**

The Horticulturist's Rule Book.
By L. H. BAILEY. In no other volume can there be found such a quantity of valuable information in such a handy form for florists, fruit growers, truck gardeners and others. The chapters on insecticides and fungicides, plant diseases, seed tables and planting tables, cements, glues, etc., will all be found exceedingly valuable. Cloth. 302 pages. **75 cents**

Mushrooms—How to Grow Them.
By WM. FALCONER. This is the most practical work on the subject ever written, and the only book on growing mushrooms published in America. The author describes how he grows mushrooms and how they are grown for profit by the leading market gardeners, and for home use by the most successful private growers. Engravings drawn from nature expressly for this work. Cloth. **$1.00**

The Nursery Book.
By L. H. BAILEY. A complete guide to the multiplication of plants. The book comprises full practical directions for sowing, the making of all kinds of layers, stools, cuttings, propagation by bulbs and tubers, and very complete accounts of all the leading kinds of budding, grafting and inarching. An alphabetical catalog of about 1500 plants—of fruit, kitchen-garden, ornamental and greenhouse species—with directions for their multiplication. Cloth. **$1.25**

Insects and Insecticides.
By CLARENCE M. WEED, D. Sc. A practical manual concerning noxious insects and the methods of preventing their injuries. Profusely illustrated. A generally useful handbook on noxious insects. It covers the whole field of insect pests very thoroughly and is especially valuable for its complete and up-to-date methods of fighting insects. The work is intensely practical. All the important insect pests are described and remedies for them, and methods of preventing their injuries described in detail. Cloth. **$1.50**

Greenhouse Heating.

SUBSCRIBERS are welcome to ask questions to be answered in this department of the REVIEW. Full names must invariably be signed, as an evidence of good faith, but they will not be used in publication.

PIPING TWO HOUSES.

I am going to build a greenhouse plant of the general dimensions described below and want to know the way you would pipe the houses in order to get a temperature of 56 degrees, in weather 10 degrees below zero. There will be a south house 30x60. This house will be sixteen feet to the ridge, having glass ends to within three feet of the ground. The south wall will be four feet to the gutter, with two and a half feet of glass. Adjoining on the north, in a space 18x60, will be the boiler shed, 18x18, at the west end, a smaller greenhouse, 18x32, in the center, and at the east end an office, 10x18. The smaller greenhouse will have a wall four feet high on the north and the boiler shed and office will be eight and ten feet respectively to the ceiling.

The boiler is a steel shell, ten feet long and thirty inches in diameter, with sixteen 3-inch flues. I can only go deep enough to put the top of the boiler eighteen inches below the return pipes. I have 3½-inch boiler flues for flow pipes and 4-inch boiler flues for return. I have only one 4-inch flow and one 4-inch return in the boiler. Under these conditions, would it be better to provide the boiler with more openings? J. C. McP.

Since the boiler is located practically at the northwest corner of the house 30x60, run a 4-inch flow across the west end, teeing off into the heating pipes, these to be gathered into a 4-inch return running

GET WISE

TAYLOR STEAM TRAP CO.

BATTLE CREEK, MICH., U. S. A.

Hitchings' Boilers Are Easy To Set Up

Note the ease with which the base can be put together—a few minutes, work with a wrench.

If you add more sections to your boiler, you can add to the base by simply removing the front piece, bolting on as many more base sections as you need, and replacing the front without disturbing the sections already in place.

What a lot cheaper and easier this way is with our cast iron boiler than having to build a large brick pit as is necessary with most wrought iron boilers.

across the east end of the house and to be carried back to the boiler under the north bench. Put two 1½-inch pipes on the walls and seven 2-inch pipes under the benches, distributing them as evenly as possible. You will then have eleven pipes the length of the house, besides the flow across the west end and the return across the east end and down the north side.

It would be better to have a separate opening in the boiler for a 4-inch flow for the small north side house 18x32. At the boiler-shed end of the house divide into five 2-inch radiating pipes, and two 1½-inch on the outside wall, running to the far end; there to be gathered into a 4-inch return to come back to the boiler. Carry a separate 2-inch flow through this house to take care of the radiators in office, which stands at the farther end.

Put valves at each end of each radiating pipe, so that any can be cut out as the weather conditions make desirable; you will not need them all except in severe weather.

It would be better to put the boiler lower, although the top eighteen inches below the returns will do. A good fall to the boiler, however, makes for quicker circulation, and a rapid circulation means a saving in the fuel bill. It usually is money well spent to get the boiler well down and the expansion tank well up.

BAR HARBOR, ME.

At the Mount Desert Nurseries, owned by George B. Dorr, of Boston, and managed by William Miller, a complete and effective automatic sprinkling system is being installed. Already 2,500 feet of pipes have been laid for this purpose, and probably 10,000 feet more will be installed before the end of the season. And next summer Mr. Dorr plans to double this amount. It will be used in every part of the gardens, placed high or low as the height of tall plants or trees requires, and no portion of the grounds will escape.

Other changes are to be made at the

Mount Desert Nurseries. A machine house is to be built, across the road from the greenhouses, near the pond. Power will be installed and a grindstone, lathe and saws run. Here in the winter men will be employed to make boxes and markers, and the engine will also be utilized to pump water from the pond to supply a part of the irrigation system. Three other small pumps are to be installed for this last named purpose, in as many sections of the grounds; and a large engine will be set up to take care of the main supply, making the nurseries independent of the water company. The water will come from the muck swamp so called, and the muck from this swamp will be dredged and used or sold. The swamp will be dammed so that a water acreage of about twelve acres will be available.

The roads in the nursery are to be named and marked, for the convenience of visitors in finding their way about and for giving directions to others for finding readily any special section or group. The nurseries, interesting as they are at present, are destined to become even more valuable and attractive if all the contemplated changes are effected.

MINNEAPOLIS.

The Market.

Midsummer quiet has struck the city, and the florists' business suffers in consequence. Outdoor stock is beginning to bloom, and the sales are not large, except now and then for a few funerals or weddings. Stock is scarce, roses small, and carnations falling off every day. Gladioli and asters are on the market in sufficient quantities.

Various Notes.

O. C. Swanson and his family are spending a few days at Red Wing.

Miss Whitted had two large funerals, occasioning a number of fine, good-sized designs.

The Minneapolis Floral Co. is cutting some asters and some nice Kaiserin.

Oscar Carlson is putting some fine roses on the market every day.

The Minnesota State Florists' Association holds its annual picnic at Big Island Park this week, July 15.

The parks of the city are in full splendor at present. A number of begonia beds make a fine blaze of color along the border of the lake. M. E. M.

LEXINGTON, KY.

The Market.

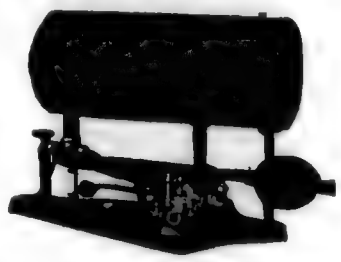
Business is slow and there is nothing doing at the downtown stores. Roses, carnations and sweet peas are poor in quality. Some good gladioli and snapdragons are coming to this market. A few tuberoses are to be seen every now and then, and other outdoor flowers are abundant. Green goods are in good supply.

Various Notes.

The boys at the J. A. Keller estate are now extremely busy planting chrysanthemums and roses.

Mr. and Mrs. David Honaker are visiting friends and relatives in St. Louis, Mo.

The Michler Bros. Co. will erect a house this summer for general stock.



Anderson & White are busy with chrysanthemums at their place on Georgetown street. Their stock is looking well and they will no doubt cut some good flowers this fall.

August Le Clere made a flying business trip to Cincinnati, O., last week.

R. H. Tacke, superintendent of parks, will leave soon for a trip to the west.

The Fister Bros., vegetable growers on the Maysville road, have a new automobile. Blue Grass.

Florists' Review

When Writing Advertisers

MOUNT CARROLL, ILL.

John Y. Lambert may engage in the florists' business here, but the decision as to whether he shall do so or not seems to depend on the amount of inducement which the town is willing to offer for the sake of having the industry located here. At the time of the latest report, a contract containing the following provisions was under consideration:

"He (Mr. Lambert) asks a piece of ground 70x83 feet, free of encumbrance, to be owned by him only so long as he uses it for the purposes named. He also asks a bonus of $500, to be used and expended in improvements on the said lots. He agrees to remove all weeds, brush and rubbish as soon as possible, and within three months erect and equip with all modern appliances a building 25x50 feet, and fully stock said greenhouse during the first year, and keep it stocked, and that he will park said lot and plant flower beds thereon, keep it in first-class condition and properly beautify the lot. He also agrees to erect a frame office building, and that he will within two years erect at least one other greenhouse of greater dimensions than the above one, and will put up such other houses as the business will justify, maintain them all in good condition, and that he will keep the same insured against fire and hail, for at least ten years. That he will conduct the establishment in a businesslike manner under the name of the Savanna & Mount Carroll Floral Co., and if he fails to fulfill his part of the contract for the said ten years, the lot and buildings shall revert back to J. S. Miles, as trustee, for the benefit of the subscribers of said donation. If the business grows so that the aforesaid lot is not large enough to conduct the business on, then he shall have the right to sell the lot and invest the proceeds in a larger one, on the same terms and conditions as above."

IN MICHIGAN.

Chas. Frueh & Sons, Saginaw, have plans for erecting a large greenhouse near Webber street and Genesee avenue, on a tract of fifteen acres. They have started operations and a barn has been completed.

Carnation day, an annual event at Benton Harbor for the benefit of Mercy hospital, was held June 28. Robert A. Smythe, who is president of the Michigan State Horticultural Society this year, donated the flowers as usual. The ladies cleared $220 from the sale of the 7,000 blossoms.

A. J. Tozer, of Otsego, is rebuilding and enlarging his greenhouse. The house will be 160 feet long and the lower portion, benches and floor will be constructed of cement. A new boiler-room will be added. A. G.

PLEASE cut out our advertisement, for we are sold out of stock. Please attend to this at once, as we do not want to answer any more letters. Thanking you for past favors.—SCHARFF BROS., Van Wert, Ohio.

PITTSBURG.

The Market.

Things have now assumed an old, summer time look. There are so many away on their vacations that the shops seem lonesome. All have a few good flowers in sight, and a few are all they need, as there is little business.

The wholesalers are busy for an hour in the morning, and then are through for the day. There are some good Kaiserins, Killarneys, Beauties, lilies, valley and gladioli still coming in. Carnations are almost a thing of the past, and all are looking longingly for some good asters, which have not made their appearance in any quantity so far.

Various Notes.

Walter Breitenstein entertained a number of his friends Friday evening, July 9, at the Keystone Canoe Club. After dinner under the trees, the whole party were taken out in canoes, and, following an hour or more on the water, they returned to the large porch standing out on the river and smoked and talked until train time. Business was never mentioned, and, on leaving, all voted it the most pleasant evening spent in years, and a number of the party were converted into canoe enthusiasts.

There have been a number of the craft who have taken unto themselves worries during the last month, but they have all wedded off on the quiet, scarcely letting their best friends know about it, but Edward J. McCallum, of the McCallum Co., will marry Miss Elizabeth M. Johnston July 17. The announcement was made last week, and your correspondent is invited, so this will be the only real wedding among the profession this season. They will leave that evening to spend their honeymoon among the Canadian lakes. If any of you meet them, show them a good time.

Oliver Crissman, of Punxsutawney, left last week for Seattle, Wash. He will visit all points of interest along the road, as he will be in no hurry, this trip being for sightseeing and pleasure.

Homewood cemetery is putting up a fine high greenhouse at the gate. The foundation is concrete and the balance U-bar material. It will be a much needed improvement. Hoo-Hoo.

PLEASE discontinue our advertisement, as we are completely sold out. This has convinced my proprietor that nobody else can sell as quick as the REVIEW does.—H. J. POTOMKIN, Mgr., Forest City, Ia.

THE RETAIL FLORIST.....

THE STANDING WREATH.

In the accompanying illustration no flowers are shown in the base of the standing wreath, the material used there being leucothoe sprays and fancy fern leaves. Green also predominates in the wreath itself, both leucothoe leaves and asparagus being used. The flowers are all wired on picks and are set with rather long stems, so that the effect produced is one of grace rather than solidity. This is a design by Albert C. Rott, Joliet, Ill.

WHERE TO GET DESIGN PLANS.

In the World of Natural Forms.

All about us in the world of natural forms are thousands of what might be called design buildings, whose lines, when collectively arranged, form the outline of a plant, small or great. They range from the primitive club mosses to great trees. But not alone in plants are to be found designs adaptable to floral work, for there are cobwebs, butterflies, markings on stones, feathers, etc., and thousands of other objects in the animal, vegetable and mineral kingdoms.

All sorts of forms are continually before our eyes, and we become so accustomed to the great variety of them that we fail to note their differences and resemblances. In fact, no manufactured form is anything but a copy of some of the many natural forms, or a combination of these. An arrangement of lines connected makes a form, so far as the outline is concerned, and that is all we have use for at present, the solid form not bearing upon our subject. Even mathematical forms find their origin in nature, examples being often seen in triangular and hexagonal pollen grains, seed pods, stamens, pistils, stems, stalks, etc.

When one comes to think of it, all the wire frames that are used as designs by florists are what somebody has seen and considered worth reproducing in flowers, as the pillow, harp, crescent, anchor, cross, and all such. Even a basket as a receptacle is taken from some natural form, birds' nests and pitcher plants suggesting themselves as examples.

Training the Powers of Observation.

The first thing, then, in correct designing, is the ability to observe the form and design of all kinds of natural objects which may come in our way. If denied access to the woods, turn to the roadside, garden, greenhouse, the park, to pictures and museums, and the clouds and sky.

It is useless to burden the memory by trying to remember many forms, but try to understand the grouping of the lines and their relation to each other. Do a little sketching of plants and flowers, all for your own benefit. Separate the lines of the sketch in another sketch, but still keeping their direction and character. Then notice how they all fall in together. Study the outlines and see the different mathematical and free shapes of which they are composed. Trace these lines to their common source—and, most emphatically, this word "source" is singular.

Get the plan upon which a clover head or a sunflower is constructed. There is more than one scientific reason why a head of timothy differs from a snapdragon, or why the veining of a calla leaf in no way resembles that of a tansy, and there is also a reason for their widely different existence in an artistic sense.

Again, flowers, stems and foliage change their forms, often hourly. Flowers open and reverse their petals in many interesting ways; foliage draws toward the sunlight, and some leaves and flowers fold up at night. Stems bend and assume different curves, according to the weight of flowers, foliage or fruit. But all these changes are merely modifications of the original plan upon which the plant is built, and are highly profitable to observe.

Training the Sense of Beauty.

According as the eye is trained, and sometimes instinctively without instruction, the sense of beauty is impressed by natural form. What, then, is meant by the term "beauty"? The accepted idea is that beauty is produced by a multiplicity of symmetrical parts uniting in a consistent whole, causing delight, which, to put it in other words, is the pleasing effect of a well organized unit.

According to one's capacity for observation and application, he should be graded as a designer. If he is able to analyze a collection of lines called a plant, and to use the principles which he has discovered, he can design. Nine-tenths of the battle is being able to see well. The tenth tenth is the getting together a similar collection of lines bound by good coloring, for inconsistent coloring may spoil it all.

Symmetry as one of the elements of beauty is a fascinating subject of itself. Its presence is more or less to be noted in every natural object, although not always seen at a glance. It may be recognized

WHERE TO GET DESIGN PLANS.

In the World of Natural Forms.

All about us in the world of natural orms are thousands of what might be lled design buildings, whose lines, when ollectively arranged, form the outline of plant, small or great. They range from he primitive club mosses to great trees. But not alone in plants are to be found lesigns adaptable to floral work, for there re cobwebs, butterflies, markings on stones, feathers, etc., and thousands of ther objects in the animal, vegetable nd mineral kingdoms.

All sorts of forms are continually be fore our eyes, and we become so accus tomed to the great variety of them that we fail to note their differences and re semblances. In fact, no manufactured orm is anything but a copy of some of the many natural forms, or a combination f these. An arrangement of lines con ected makes a form, so far as the outline s concerned, and that is all we have use or at present, the solid form not bearing pon our subject. Even mathematical orms find their origin in nature, ex mples being often seen in triangular and xagonal pollen grains, seed pods, amens, pistils, stems, stalks, etc.

When one comes to think of it, all the ure frames that are used as designs by orists are what somebody has seen and nsidered worth reproducing in flowers, the pillow, harp, crescent, anchor, oss, and all such. Even a basket as a ceptacle is taken from some natural rm, birds' nests and pitcher plants sug sting themselves as examples.

Training the Powers of Observation.

The first thing, then, in correct design g, is the ability to observe the form and sign of all kinds of natural objects ich may come in our way. If denied cess to the woods, turn to the roadside, rden, greenhouse, the park, to pictures d museums, and the clouds and sky.

It is useless to burden the memory by ying to remember many forms, but try understand the grouping of the lines d their relation to each other. Do a tle sketching of plants and flowers, all r your own benefit. Separate the lines f the sketch in another sketch, but still eping their direction and character. hen notice how they all fall in together. tudy the outlines and see the different mathematical and free shapes of which they are composed. Trace these lines to their common source—and, most emphatically, this word "source" is singular.

Get the plan upon which a clover head or a sunflower is constructed. There is more than one scientific reason why a head of timothy differs from a snapdragon, or why the veining of a calla leaf in no way resembles that of a tansy, and there is also a reason for their widely different existence in an artistic sense.

Again, flowers, stems and foliage change their forms, often hourly. Flowers open and reverse their petals in many interesting ways; foliage draws toward the sunlight, and some leaves and flowers fold up at night. Stems bend and assume different curves, according to the weight of flowers, foliage or fruit. But all these changes are merely modifications of the original plan upon which the plant is built, and are highly profitable to observe.

Training the Sense of Beauty.

According as the eye is trained, and sometimes instinctively without instruction, the sense of beauty is impressed by natural form. What, then, is meant by the term "beauty"? The accepted idea is that beauty is produced by a multiplicity of symmetrical parts uniting in a consistent whole, causing delight, which, to put it in other words, is the pleasing effect of a well organized unit.

According to one's capacity for observation and application, he should be graded as a designer. If he is able to analyze a collection of lines called a plant, and to use the principles which he has discovered, he can design. Nine-tenths of the battle is being able to see well. The tenth tenth is the getting together a similar collection of lines bound by good coloring, for inconsistent coloring may spoil it all.

Symmetry as one of the elements of beauty is a fascinating subject of itself. Its presence is more or less to be noted in every natural object, although not always seen at a glance. It may be recognized

The Standing Wreath.

by likeness of opposite parts, equality, regularity, balance and proportion. A triangle may be more apparently symmetrical than a wild spray of ampelopsis hanging from the branch of a tree; yet, if the outline of the same tossing branch were traced carefully, there would be found a wonderful regularity and balance in all its parts.

Graceful Blending of Lines.

A union of all its parts and lines is another essential found in natural beauty; that is, all the stems which correspond to lines must be united at some point, and, as a corollary to the above theorem, they must come together easily, never abruptly and shortly.

Take, for instance, the seed pod of any kind of a pea, vetch or locust. Observe how gracefully the side lines merge into each other at the points of the pods, and how, as the pods hang upon the plant, their outlines unite with the stalk, and how all the stalks find the parent stalk and lose themselves in its lines.

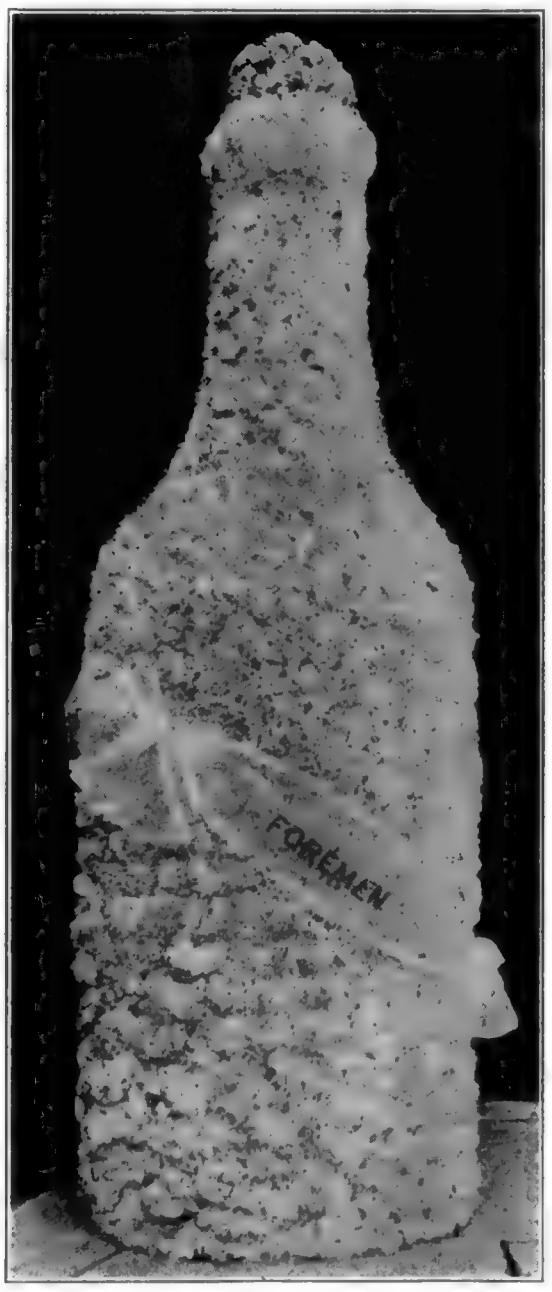
Trace backward, if you can, the branching of the elm, beginning at the tip of some tiny twig and following it into a larger stem with many others of its own size. The stem seeks its source in the smaller branches, and they, in turn, after absorbing all the lines of its smaller branching stems, run into the principal branches, which all finally come back to the trunk.

Symmetry in Apparent Irregularity.

What appears on the surface to be wanting in symmetry may be traced to some modification of a very regular form. It may be incomplete or be a fraction of a symmetrical form. What are called irregular flowers will be found to be wrongly so called when they are unfolded or closely examined, as in the case of sweet peas, violets, orchids or snapdragons. The most casual observer would not fail to call them beautiful flowers, and with such a universal verdict in their favor they must be beautiful and possess the essential elements of beauty. A little study will reveal it, too.

Many leaves and flowers which to all appearances are symmetrical are found to be mathematically not true when folded together. But the general effect is that of a perfectly symmetrical body. The fact is that they are scarcely ever exactly developed.

Natural forms, then, are our object lessons and reading charts. We must be able to trace the essential qualities of beauty, symmetry and unity in whatever we consider interesting and fascinating objects, and we must proceed to reduce these forms and plans to practical shapes and to capture the outlines of the clouds and tree tops as they cast their shadows upon our work tables.



Gertrude Blair.

UNUSUAL DESIGNS.

Every now and then the retail florist is called upon to execute some unusual design, such as that ordered at J. F. Ammann's store at Alton, Ill., for a recent funeral. The deceased was the president of one of the largest bottle factories in the country. The foremen in his establishment took up a collection to send a design to the funeral. They wanted something unusual; nothing would suit them so well as a big floral bottle, and they got it.

There is, of course, nothing artistic about such a design. Its execution is largely mechanical and the only thing to commend such an arrangement of flowers is that it brings a good bunch of money into the florist's cash drawer. The cash register rings as merrily when the money comes from such a design as though the arrangement were one to appeal to the artistic senses of the florist. The thing to do when people want such a design is to make it for them, but never suggest it; if the florist is permitted to have any voice in the matter the recommendation should be for a more natural treatment of flowers.

It often happens that, as in the case of the bottle makers, nothing else will

Floral Bottle Five Feet High.

bring so good a price as something on the bottle order. Mr. Ammann's manager was called upon to make a design five feet high and two feet or more in diameter. The accompanying illustration shows how well the work was done. The only sign of color was in the carnations representing the cork; all the rest were white. Chiffon was used to supply a place for the lettering, which wisely was limited to the single word "Foremen." It is interesting to note that although there were a large number of first-class designs at the funeral, there was nothing at all which made so big a hit as the bottle.

SHASTA DAISIES.

In a recent street parade at Alvin, Tex., Mrs. P. E. Nelson, who ranks among the leaders of the florists there, captured first prize for decorated vehicles with a buggy decorated with 10,000 Shasta daisies, as shown in the accompanying illustration. Some of the flowers were kept four days in water in a cool room before using. In the illustration the lady driving is Miss Minnie M. Tennis, of Brazoria, Tex., niece of the florist. Mrs. Nelson has had an excellent business this season. She does a general retail trade and also a wholesale business in cape jasmines and violets.

BEAUTIES FOR A BANKER.

St. Louis has a remarkable man in Rufus J. Lockland, president of the Boatman's Bank, who was 90 years of age July 8. His friends remembered the day with flowers and among the many sent were six bunches of American Beauty roses, ninety blooms in each bunch. The flowers completely filled the venerable gentleman's office. The larger part were supplied by C. Young & Sons Co., but all the St. Louis florists had a share in the business.

EUROPEAN NOTES.

Two Great English Shows.

The art of exhibiting plants and flowers never stood on a higher pinnacle in England than at the present day and this was fully demonstrated at two great shows just held in London, one the annual show of the National Rose Society, the other the annual summer show of the Royal Horticultural Society. For extent they have never been surpassed; for superior culture their equals could not be found in Europe, and for artistic finish, well, we generally give the palm to the Parisian exhibitors, but on this occasion Amos Perry, of Enfield, and M. Prichard, of Christchurch, easily reached the French standard for natural and artistic effect, with their rock garden and water scenes.

The columns of our daily newspapers and page after page of our gardening journals are filled with appreciative articles on the shows, and the public read these articles with interest, for just as exhibiting has reached its highest pinnacle, so has the love of flowers reached its zenith in the hearts of all classes of the people. When William R. Smith, of Washington, was over here a year or two ago, I asked him in which direction he noticed the greatest advance in horticulture, and he replied, "In the gardens of the middle classes and the mechanics. The increase of their enthusiasm in gardening since my previous visits is marvelous, and the variety of flowers in their gardens astonishes me." Nurserymen and seed merchants cater accordingly and it is no unusual thing for firms to book orders amounting to 100, 200 or 300 pounds sterling at a two days' show, largely made up of orders from the classes named.

Awards by the Rose Society.

At the National Rose Society's show the championship trophy was awarded to Alex. Dickson & Sons, Newtownards. This class calls for seventy-two blooms in distinct varieties. The second prize was awarded to B. R. Cant & Sons, Colchester. For group of roses, 250 square feet, Hobbies, Ltd., Dereham, won with a gaily colored and effective arrangement, in which tall standard plants of Dorothy Perkins, Coquina, Tausendschon, Hiawatha, etc., played a leading part. For a group of cut roses, George Mount, of Canterbury, surpassed all rivals with grand pyramidal stands and circular banks of bloom of Richmond, Frau Karl Druschki, Mrs. John Laing, Mme. Mela-

Bouquets of Ninety Flowers Each for a Nonagenarian.

nie Soupert, Mme. Abel Chatenay, Mme. Ravary, etc.

For new seedling roses, Hugh Dickson, of Belfast, topped the list, receiving two gold medals, one for Lady Pirrie, hybrid tea, a salmon red with a tint of orange in the petals, and the other for Countess of Shaftsbury, a rich, deep, rosy carmine hybrid tea.

The R. H. S. Exhibit.

At the R. H. S. show, roses were superbly shown by Alex. Dickson & Sons, who had fine stands of new varieties; also by Hobbies, Ltd., who again excelled with a magnificent show of ramblers, and by Merryweather & Sons, Southwell, with their new rambler, Jessie. The Lyon rose was a grand feature in the groups of many exhibitors.

Sweet peas from Sutton & Sons were superb, and E. W. King & Co., seed growers, Coggeshall, arranged one of the loveliest stands in the show. Then there were charming groups from Jarman & Co., Chard, and W. Unwin, of Cambridge. Mrs. Townsend, a white flower with a violet margin, from Jarman & Co., received an award of merit, as did also Colleen, from Wm. Deal, Kelvedon, a fine flower, showy, crimson standard with cream base and mauve wings. Several other varieties received awards.

In carnations there is nothing new to record, except that the number of growers continues to increase and there were more groups of this flower than on any previous occasion. The leading exhibitors were C. F. Waters, Balcombe; A. F. Dutton, Iver; W. H. Page, Hampton; Stuart Low & Co., Bush Hill Park, who had fine pyramids of Enchantress and baskets of Britannia, and Bell & Sheldon, Guernsey.

Some Leading Features.

To single out a few leading features, I might mention the exhibit of J. Veitch & Sons, Ltd., which included a dwarf-growing, compact, double scarlet begonia named Washington; the Mme. Loise Mere peony, with large, lovely pink flowers, from Jackman & Son, Woking; grand specimen caladiums in innumerable lovely tints and shades, from Peed & Son, London, and Primula Littonia from Bees, Ltd., Liverpool. This received an award of merit.

The hardy flower section was a great feature. In addition to Perry's and Prichard's groups, referred to in my opening note, there were fine garden scenes from Artindale & Son, Sheffield; Wallace & Co., Colchester, and Carter & Co., London, with a Japanese garden; also peonies in profusion from Kelway & Sons, Langport, and R. H. Bath, Ltd., Wisbeck, and massive banks of bloom from Barr & Son, London; Gibson & Co., Bedale, and Frank Lilley, Guernsey. Delphiniums, eremuri, irises, liliums and early flowering gladioli were conspicuous.

The show was visited by a party of German horticulturists, numbering about ninety, who were entertained at lunch by the R. H. S. The members of the party are studying styles of landscape gardening in England, by visiting many leading parks in and around London, also several noblemen's establishments and the nurseries of James Veitch & Sons, Ltd.

The fruit and floral committees of the R. H. S. celebrated their jubilee by a dinner in London, July 6.

On the same day I met several representatives of the Dutch bulb fraternity in London, all in good humor over their season's bookings. The bulb trade seems to be going all right. Owing to the late season, they report that shipping will begin ten or twelve days late. BEE.

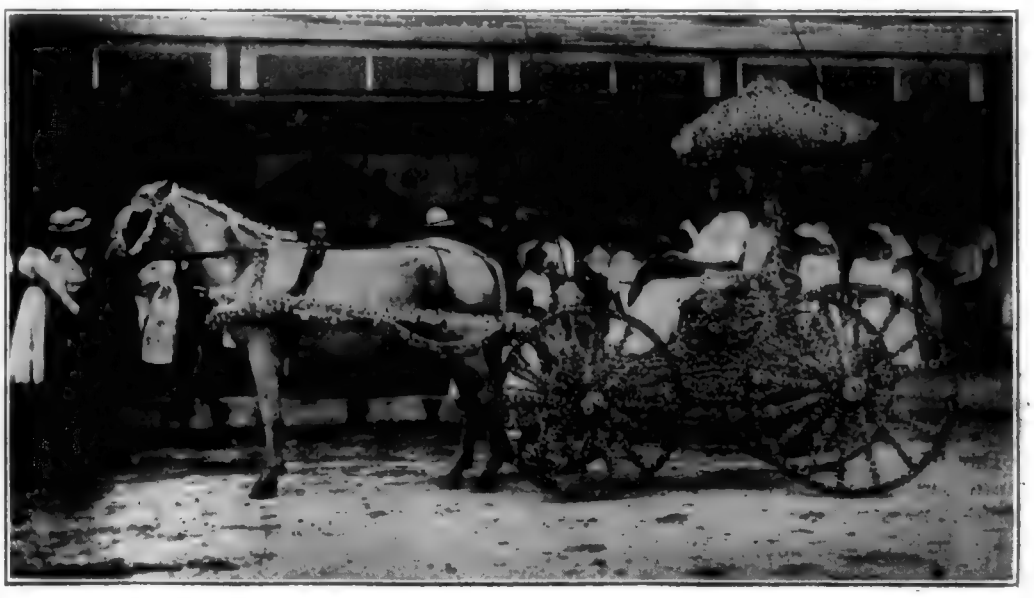
DISEASE ON GLADIOLI.

I have sent you under separate cover a sample of diseased gladioli grown outdoors. The disease is scattered all over a half-acre patch. Please state what the trouble is and what to do for it.

W. E.

This disease is not at all uncommon on gladioli outdoors and is found also on one or two of the forcing varieties. Without knowing something of the character of your soil and other conditions, it is difficult to say what the cause of the trouble is. The use of fresh barnyard manure, especially when it comes in direct contact with the corms, is the most fertile cause of the disease. Manure should be thoroughly decayed and, if possible, should be plowed in during the fall previous to planting. Cutting plants down close to the ground when taking off the flower spikes tends to cripple the corms and make them come weak and sickly the next season, as does removing the tops directly after lifting, before they have had time to dry.

I would advise pulling out the diseased plants now and destroying them. Give your corms a change of ground, if possible, next season. If the land is heavy, add plenty of sand and grit to lighten it. Gladioli seem to do best in rather sandy ground, which has been liberally manured the preceding fall. Wood ashes, thoroughly leached, are useful in heavy soils. In planting, avoid any corms which have dark blotches, signifying disease. I do not think the trouble need cause you any worry, as you can overcome it by selection and care another season. C. W.



GERANIUM PESTS.

Can you tell me what to do for the bug on geraniums? It is a green and black striped bug about the size of the squash bug. The geraniums are bothered the most with it, but it is also working on foliage and asters. W. E. G.

Outside of hand picking, which is a good remedy where the bugs are not too many, the best way to clean out the pest in question is to spray your plants with a poisonous solution. Paris green at the rate of one ounce to twelve gallons of water, sprayed over the foliage, will be found effectual. Use a little lime in the water, to prevent scorching of the foliage.

C. W.

LEBANON, N. H.—The Haskell Floral Co. is building an addition to its greenhouses.

Florist's Outfit Decorated with Thousands of Shasta Daisies.

by likeness of opposite parts, equality, regularity, balance and proportion. A triangle may be more apparently symmetrical than a wild spray of ampelopsis hanging from the branch of a tree; yet, if the outline of the same tossing branch were traced carefully, there would be found a wonderful regularity and balance in all its parts.

Graceful Blending of Lines.

A union of all its parts and lines is another essential found in natural beauty; that is, all the stems which correspond to lines must be united at some point, and, as a corollary to the above theorem, they must come together easily, never abruptly and shortly.

Take, for instance, the seed pod of any kind of a pea, vetch or locust. Observe how gracefully the side lines merge into each other at the points of the pods, and how, as the pods hang upon the plant, their outlines unite with the stalk, and how all the stalks find the parent stalk and lose themselves in its lines.

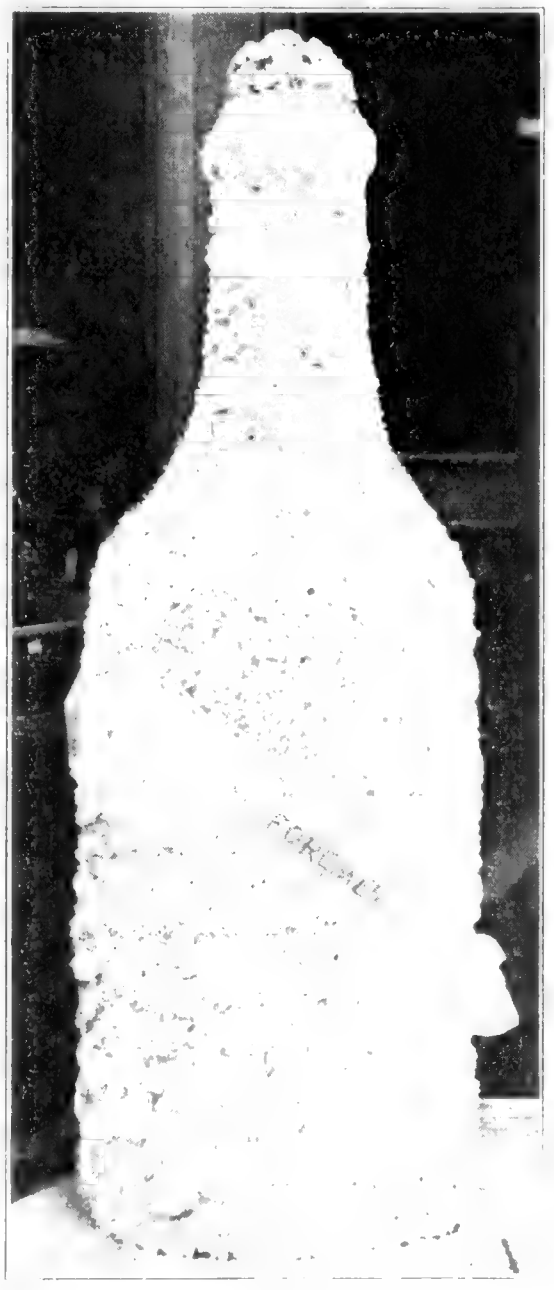
Trace backward, if you can, the branching of the elm, beginning at the tip of some tiny twig and following it into a larger stem with many others of its own size. The stem seeks its source in the smaller branches, and they, in turn, after absorbing all the lines of its smaller branching stems, run into the principal branches, which all finally come back to the trunk.

Symmetry in Apparent Irregularity.

What appears on the surface to be wanting in symmetry may be traced to some modification of a very regular form. It may be incomplete or be a fraction of a symmetrical form. What are called irregular flowers will be found to be wrongly so called when they are unfolded or closely examined, as in the case of sweet peas, violets, orchids or snapdragons. The most casual observer would not fail to call them beautiful flowers, and with such a universal verdict in their favor they must be beautiful and possess the essential elements of beauty. A little study will reveal it, too.

Many leaves and flowers which to all appearances are symmetrical are found to be mathematically not true when folded together. But the general effect is that of a perfectly symmetrical body. The fact is that they are scarcely ever exactly developed.

Natural forms, then, are our object lessons and reading charts. We must be able to trace the essential qualities of beauty, symmetry and unity in whatever we consider interesting and fascinating objects, and we must proceed to reduce these forms and plans to practical shapes and to capture the outlines of the clouds and tree tops as they cast their shadows upon our work tables.



Gertrude Blair.

UNUSUAL DESIGNS.

Every now and then the retail florist is called upon to execute some unusual design, such as that ordered at J. F. Ammann's store at Alton, Ill., for a recent funeral. The deceased was the president of one of the largest bottle factories in the country. The foremen in his establishment took up a collection to send a design to the funeral. They wanted something unusual; nothing would suit them so well as a big floral bottle, and they got it.

There is, of course, nothing artistic about such a design. Its execution is largely mechanical and the only thing to commend such an arrangement of flowers is that it brings a good bunch of money into the florist's cash drawer. The cash register rings as merrily when the money comes from such a design as though the arrangement were one to appeal to the artistic senses of the florist. The thing to do when people want such a design is to make it for them, but never suggest it; if the florist is permitted to have any voice in the matter the recommendation should be for a more natural treatment of flowers.

It often happens that, as in the case of the bottle makers, nothing else will

Floral Bottle Five Feet High.

bring so good a price as something on the bottle order. Mr. Ammann's manager was called upon to make a design five feet high and two feet or more in diameter. The accompanying illustration shows how well the work was done. The only sign of color was in the carnations representing the cork; all the rest were white. Chiffon was used to supply a place for the lettering, which wisely was limited to the single word "Foremen." It is interesting to note that although there were a large number of first class designs at the funeral, there was nothing at all which made so big a hit as the bottle.

SHASTA DAISIES.

In a recent street parade at Alvin, Tex., Mrs. P. E. Nelson, who ranks among the leaders of the florists there, captured first prize for decorated vehicles with a buggy decorated with 10,000 Shasta daisies, as shown in the accompanying illustration. Some of the flowers were kept four days in water in a cool room before using. In the illustration the lady driving is Miss Minnie M Tennis, of Brazoria, Tex., niece of the florist. Mrs. Nelson has had an excellent business this season. She does a general retail trade and also a wholesale business in cape jasmines and violets.

BEAUTIES FOR A BANKER.

St. Louis has a remarkable man in Rufus J. Lockland, president of the Boatman's Bank, who was 90 years of age July 8. His friends remembered the day with flowers and among the many sent were six bunches of American Beauty roses, ninety blooms in each bunch. The flowers completely filled the venerable gentleman's office. The larger part were supplied by C. Young & Sons Co., but all the St. Louis florists had a share in the business.

EUROPEAN NOTES.

Two Great English Shows.

The art of exhibiting plants and flowers never stood on a higher pinnacle in England than at the present day and this was fully demonstrated at two great shows just held in London, one the annual show of the National Rose Society, the other the annual summer show of the Royal Horticultural Society. For extent they have never been surpassed; for superior culture their equals could not be found in Europe, and for artistic finish, well, we generally give the palm to the Parisian exhibitors, but on this occasion Amos Perry, of Enfield, and M. Prichard, of Christchurch, easily reached the French standard for natural and artistic effect, with their rock garden and water scenes.

The columns of our daily newspapers and page after page of our gardening journals are filled with appreciative articles on the shows, and the public read these articles with interest, for just as exhibiting has reached its highest pinnacle, so has the love of flowers reached its zenith in the hearts of all classes of the people. When William R. Smith, of Washington, was over here a year or two ago, I asked him in which direction he noticed the greatest advance in horticulture, and he replied, "In the gardens of the middle classes and the mechanics. The increase of their enthusiasm in gardening since my previous visits is marvelous, and the variety of flowers in their gardens astonishes me." Nurserymen and seed merchants cater accordingly and it is no unusual thing for firms to book orders amounting to 100, 200 or 300 pounds sterling at a two days' show, largely made up of orders from the classes named.

Awards by the Rose Society.

At the National Rose Society's show the championship trophy was awarded to Alex. Dickson & Sons, Newtownards. This class calls for seventy two blooms in distinct varieties. The second prize was awarded to B. R. Cant & Sons, Colchester. For group of roses, 250 square feet, Hobbies, Ltd., Dereham, won with a gaily colored and effective arrangement, in which tall standard plants of Dorothy Perkins, Coquina, Tausendschon, Hiawatha, etc., played a leading part. For a group of cut roses, George Mount, of Canterbury, surpassed all rivals with grand pyramidal stands and circular banks of bloom of Richmond, Frau Karl Druschki, Mrs. John Laing, Mme. Mela-

Bouquets of Ninety Flowers Each for a Nonagenarian.

. e Soupert, Mme. Abel Chatenay, Mme. avary, etc.

For new seedling roses, Hugh Dickson, Belfast, topped the list, receiving two old medals, one for Lady Pirrie, hybrid ea, a salmon red with a tint of orange in e petals, and the other for Countess of haftsbury, a rich, deep, rosy carmine brid tea.

The R. H. S. Exhibit.

At the R. H. S. show, roses were superbly shown by Alex. Dickson & Sons, ho had fine stands of new varieties; also w Hobbies, Ltd., who again excelled with magnificent show of ramblers, and by Merryweather & Sons, Southwell, with heir new rambler, Jessie. The Lyon ose was a grand feature in the groups f many exhibitors.

Sweet peas from Sutton & Sons were uperb, and E. W. King & Co., seed rowers, Coggeshall, arranged one of the veliest stands in the show. Then there ere charming groups from Jarman & , Chard, and W. Unwin, of Cambridge. irs. Townsend, a white flower with a olet margin, from Jarman & Co., reived an award of merit, as did also Colen, from Wm. Deal, Kelvedon, a fine wer, showy, crimson standard with am base and mauve wings. Several her varieties received awards.

In carnations there is nothing new to ord, except that the number of growrs continues to increase and there were re groups of this flower than on any evious occasion. The leading exhibitors re C. F. Waters, Balcombe; A. F. Dutn, Iver; W. H. Page, Hampton; Stuart w & Co., Bush Hill Park, who had e pyramids of Enchantress and basts of Britannia, and Bell & Sheldon, uernsey.

Some Leading Features.

To single out a few leading features, might mention the exhibit of J. Veitch Sons, Ltd., which included a dwarf owing, compact, double scarlet begonia med Washington; the Mme. Loise Merony, with large, lovely pink flowers, om Jackman & Son, Woking; grand cimen caladiums in innumerable lovely ts and shades, from Peed & Son, Lonn, and Primula Littonia from Bees, td., Liverpool. This received an award f merit.

The hardy flower section was a great feature. In addition to Perry's and Prichard's groups, referred to in my opening note, there were fine garden scenes from Artindale & Son, Sheffield; Wallace & Co., Colchester, and Carter & Co., London, with a Japanese garden; also peonies in profusion from Kelway & Sons, Langport, and R. H. Bath, Ltd., Wisbeck, and massive banks of bloom from Barr & Son, London; Gibson & Co., Bedale, and Frank Lilley, Guernsey. Delphiniums, eremuri, irises, liliums and early flowering gladioli were conspicuous.

The show was visited by a party of German horticulturists, numbering about ninety, who were entertained at lunch by the R. H. S. The members of the party are studying styles of landscape gardening in England, by visiting many leading parks in and around London, also several noblemen's establishments and the nurseries of James Veitch & Sons, Ltd.

CHRYSANTHEMUMS

POMPONS FOR BOUQUETS.

Will you please tell me what are the best pompon chrysanthemums to grow in Rhode Island for bouquet work?

W. B.

A good selection of varieties would be as follows:

White—Baby Margaret, Jas. Boone, Lulu, Diana.

Yellow—Alice Carey, Sunshine, Klondike, Baby.

Pink—Delicatissima, Nelly Bly, Edna, Eynesford Gem.

Bronze—Fred J., Elsie Walker, Pet.

Red—Lagravere, Erminie, Little Pet.

There are many other kinds, but the above are good and representative in their colors.

Many people who have never grown pompons under glass are not enthusiastic over their possibilities, but the pompon as a cut flower subject, when well grown, is increasing rapidly in popularity.

C. H. Totty.

HOT WEATHER NOTES.

Spraying in Sun.

The present hot weather tries the soul of man and animal alike, and we may safely say it tries the mum also, for it is a cold-blooded plant and is not at home in a tropical atmosphere. Some growers shade their houses, but, while this saves work in spraying the plants, I never liked to do it, as the plants never seemed so hard and finished as when kept in the sunlight and frequently syringed.

There exists an old idea in the minds of some people that plants should not be sprayed in a hot sun, or burning or other injurious effects will follow. It is an absolute fallacy, as anyone can prove for himself who wishes to. Evaporation is so rapid that the leaves are dry again before they can possibly burn. Spray your house and spray it often, if you want to have fine foliage and keep your plants in perfect health.

Taking the Buds.

With the advent of Golden Glow, flowering almost any time, it is a little difficult for some growers to get their bearings as to the proper time to take buds on this and other varieties. There is little or no call for mums during the month of August and early part of September, and there is no money in trying to get flowers so early.

Buds taken now will produce flowers about September 20, as it takes some eight weeks at this season to perfect the flowers. This is early enough, in my experience, to expect any adequate return from the flowers, but if the last week in September brings an early frost, as it sometimes does, the early mums bring big money.

In addition to Golden Glow, it is quite safe to take any buds on Monrovia that appear at this date, if you wish flowers at the end of September. My experience with Monrovia is that a late July bud produces a far heavier and better flower than an August bud, even though they are both crowns.

If Rosiere, October Frost or Opah are showing buds by the last week in July, it is better to keep those buds and take chances on losing a few, as they are useless on late buds, the flowers being so deficient in petalage. If a bud is rubbed out August 1 the next bud that the plant will produce will be too late to make a heavy flower.

A large part of the success of a mum crop depends on the knowledge the cultivator has of the behavior of buds of the different varieties and the proper time to take them. Charles H. Totty.

LATANIA BORBONICA.

Some Latania Borbonica in my greenhouse make leaf stems six inches long, but in private collections kept in dwellings I have noticed some that are less than one-half the length. Is this a dwarf? I should like to keep them more dwarf if there is a way to do so. F. J. U.

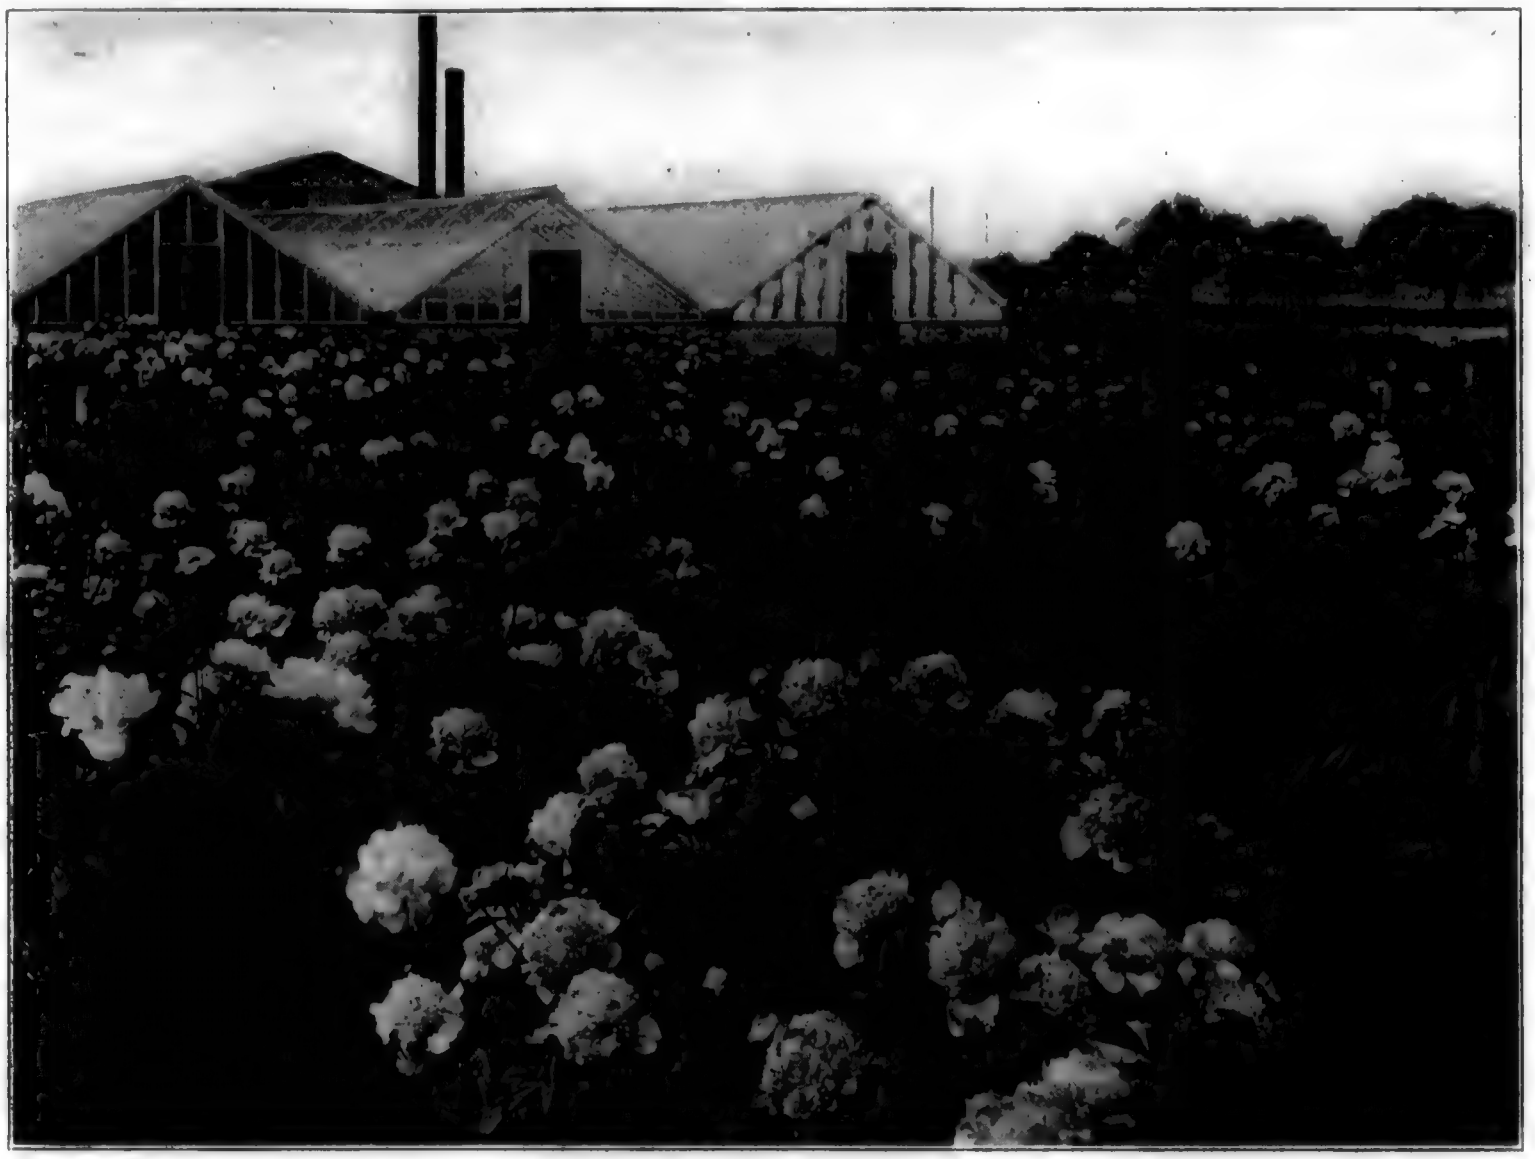
Strong heat draws up the leaf stalks on Latania Borbonica and plants grown in a cool house are always shorter stemmed than such as are kept in a close, stuffy house. I am not aware that there are two forms of this palm. Light and cooler treatment will give you a short stem, and those which are stood outdoors in summer will always be found to be much stockier than such as are left in a warm, shaded house, some distance from the glass. C. W.

TILE FOR EDGING PATHS.

Kindly give me the name and address of a firm handling the blue fluted tile used extensively in the vicinity of London for edging paths. H. S. M.

[The Review will be pleased to hear from any reader who can give H. S. M. the desired information.—Ed.]

THE PEONY DEPARTMENT



PAEONIA WITTMANNIANA.

In the Review of July 15 there was a note on that little known peony, Wittmanniana, and we doubt if many here at the north have been successful with it. If so, we would, for the benefit of the public, like them to give their experience with it. Away back in 1894, on seeing it advertised in Europe, we ordered two dozen plants of it, at a then good price for them. We had then been growing a collection of peonies for many years, and wished for a yellow variety, and we thought we could use P. Wittmanniana as a male flower to produce it. In our experience it is the earliest of all to bloom. Its flowers are smaller than anticipated, and from what we remember of it, its petals were thin and not of good texture. It bloomed so early we did not succeed in saving any pollen, and if we had we would have had to keep it a long time to use it on some of the white varieties. We grew and increased it until we had 143 plants. These we replanted in the fall of 1898, succeeded by an open, wet winter; and, to our surprise in spring, we had lost every plant of them. Consequently, with this experience, we did not, and do not consider it hardy, for general cultivation, and as a result we have not cared to grow it again, and do not have a plant of it. John Charlton & Sons.

LIVINGSTON'S PEONIES.

The accompanying illustration is from a photograph made late in May at the trial grounds of the Livingston Seed Co., Columbus, O., showing a section of the peony plantation and the ends of some of the greenhouses. The peony in the foreground is Edulis Superba, one of the best of the soft pink varieties, an early bloomer, large in flower and extremely fragrant. The Livingstons grow peonies for two purposes: For blooms for cutting for their retail cut flower store and for roots for fall sales, both at the store and through their catalogue. They have quite a patch of peonies and find them among the best of the many specialties they handle.

The greenhouse establishment consists of 60,000 feet of glass. A good part of the area is in carnations to supply the retail cut flower department and Enchantress has been their banner variety, both in quality and in productiveness. The greenhouse establishment also is used for the production of plants for the catalogue trade.

Part of the Peony Field of the Livingston Seed Co., Columbus, Ohio.

AMERICAN PEONY SOCIETY.

The Test Plots at Cornell.

It has been suggested that as one of the committee on nomenclature sent by the American Peony Society to assist in the work among the peonies at the Cornell test plots this season, it would be well for me to give an account through the columns of the REVIEW of the work done, and the condition of the peonies in the plots as we found them, for the benefit not alone of the members of the society, but the large number of florists who are more or less interested in peonies and the work of the society. I am glad to do this, especially in view of the criticisms which have been made by some members of the society, which were voiced and made public in President Ward's letter, read to the society at its last meeting at Queens, N. Y. Mr. Ward, of course, has not seen the plots for two years, and his impression regarding the conditions at Cornell has been formed from hearsay and without being aware of the great improvement which has been brought about during the last year.

Basis for Criticism.

It might be well for me to mention the basis from which these criticisms have arisen, in order to make it more clear that it was due to a few circumstances of the very beginning, which, while unfortunate in delaying the work, were unavoidable, and for which no one could justly be blamed. It must be admitted that the first results were disappointing, because the peonies were unfortunately planted at a location that was later on required by the college authorities for other purposes, making it necessary to move them to another place. This gave the plants a check from which they had not recovered when the meeting was held at Ithaca in 1907, and it was at once seen that it would require another year's growth before it would be possible to study the peonies properly. Members who came expecting to see a fine display of peonies in the field were disappointed. The ground was a stiff, heavy clay, which seemed as if it might be too wet, and many members expressed the opinion that peonies would not thrive there unless the field was thoroughly drained. This opinion seemed verified when, the following year, 1908, after a cold, wet spring, the majority of the plants still failed to show typical blooms.

In spite of all, the meeting in 1907 turned out to be a most interesting one, and the members went home full of enthusiasm and the conviction that the work was well on its way to a successful conclusion. We felt deeply indebted to the university for the work it was doing for the society, to Prof. Craig for his coöperation and hospitality, and to Dr. Coit for the thorough manner in which he had gathered together all of the known peony literature and laid the foundation for effective work, including the publication of the check-list, containing a list of all the names of the peonies catalogued at the present day, some 2,700 in all, a large proportion of which were represented by the plants themselves in the test plots.

It was suggested that a new plot be planted, this time the object being to form a collection of only the choicest varieties, each large grower being invited to send from 100 to 150 of what he would consider the best varieties. This suggestion was carried out, and the following fall collections were sent in by a large number of growers, the new plantation being placed alongside the old one, but on ground lying a little higher.

The meeting in 1908 turned out most unfortunately for the welfare of the society. President Ward was unable to be present; Prof. Craig was in Europe, dangerously ill; Dr. Coit had accepted a permanent position in Arizona, and the work of the society was in charge of Leon D. Batchelor, who had but recently taken charge, having had scarcely time to become thoroughly conversant with the work in hand. The result was depressing and discouraging for the society, and the situation for Mr. Batchelor was a most embarrassing one.

The peonies in the original plot again were not up to expectations, and it is scarcely to be wondered at that under the effect of so many depressing circumstances some of the members should become impatient and indulge in open criticism. For it seemed to many of us then that the university had lost its interest, and that there was danger that the whole purpose of the experiment would fail.

Suggestions for Betterment.

Suggestions were made by some that the peonies be moved to a more favorable location, and by others that the old plot be abandoned and the work concentrated on the new plot. Fortunately, neither of these suggestions was carried out, it being decided that it would be unfair to the original donors to fail to carry out the test along the lines originally planned.

A committee of three was appointed—C. W. Ward, S. G. Harris and myself—to devise ways and means of improving the conditions of the plot and to confer

[Concluded on page 25.]

HOT WEATHER NOTES.

Spraying in Sun.

The present hot weather tries the soul of man and animal alike, and we may safely say it tries the mum also, for it is a cold blooded plant and is not at home in a tropical atmosphere. Some growers shade their houses, but, while this saves work in spraying the plants, I never liked to do it, as the plants never seemed so hard and finished as when kept in the sunlight and frequently syringed.

There exists an old idea in the minds of some people that plants should not be sprayed in a hot sun, or burning or other injurious effects will follow. It is an absolute fallacy, as anyone can prove for himself who wishes to. Evaporation is so rapid that the leaves are dry again before they can possibly burn. Spray your house and spray it often, if you want to have fine foliage and keep your plants in perfect health.

Taking the Buds.

With the advent of October Glow, flowering almost any time, it is a little difficult for some growers to get their bearings as to the proper time to take buds on this and other varieties. There is little or no call for mums during the month of August and early part of September and there is no money in trying to get flowers so early.

Buds taken now will produce flowers about September 1. I would take only eight weeks at this season to protect the flowers. This is only a guess at my experience, to expect any adequate return from the flowers, but if the last week in September brings an early frost, as it sometimes does, the extra means bring big money.

In addition to October Glow, it is quite safe to take any buds on Monrovia that appear at this date, if you wish flowers at the end of September. My experience with Monrovia is that a late July bud produces a far heavier and better flower than an August bud, even though they are both crowns.

If Rostiere, October Frost or Opah are showing buds by the last week in July, it is better to keep those buds and take chances on losing a few, as they are useless on late buds, the flowers being so deficient in petalage. If a bud is rubbed out August 1 the next bud that the plant will produce will be too late to make a heavy flower.

A large part of the success of a mum crop depends on the knowledge the cultivator has of the behavior of buds of the different varieties and the proper time to take them. CHARLES H. TOTTY.

LATANIA BORBONICA.

Some Latania Borbonicas in my greenhouse make leaf stems six inches long, but in private collections kept in dwellings I have noticed some that are less than one half the length. Is this a dwarf? I should like to keep them more dwarf if there is a way to do so. F. J. U.

Strong heat draws up the leaf stalks of Latania Borbonica and plants grown in a cool house are always shorter stemmed than such as are kept in a close, stuffy house. I am not aware that there are two forms of this palm. Light and cool treatment will give you a short stem, and those which are stood outdoors in summer will always be found to be much stockier than such as are left in a warm, shaded house, some distance from the glass. C. W.

TILE FOR EDGING PATHS.

Kindly give me the name and address of a firm handling the blue fluted tile used extensively in the vicinity of London for edging paths. H. S. M.

[The REVIEW will be pleased to hear from any reader who can give H. S. M. the desired information. ED.]

THE PEONY DEPARTMENT

PAEONIA WITTMANNIANA.

In the REVIEW of July 15 there was a note on that little known peony, Wittmanniana, and we doubt if many here at the north have been successful with it. If so, we would, for the benefit of the public, like them to give their experience with it. Away back in 1891, on seeing it advertised in Europe, we ordered two dozen plants of it, at a then good price for them. We had then been growing a collection of peonies for many years and wished for a yellow variety, and we thought we could use P. Wittmanniana as a stale flower to produce it. In our experience it is the earliest of all to bloom. Its flowers are smaller than and cupated, not from what we remember of it, its petals were thin and not of good texture. It bloomed so early we did not succeed in saving any pollen, and if we had we could have had to keep it a long time to use on some of the choice varieties. We grew and increased it until we had 143 plants. These we replanted in the fall of 1898, succeeded by an open, wet winter; and in the ensuing spring, we lost every plant of them. Consequently with the experience, we did not, and do not consider it hardy for general cultivation and as a result we have not cared to grow it again, and do not have a plant of it. JOHN CHARLTON & SONS.

LIVINGSTON'S PEONIES.

The accompanying illustration is from a photograph made late in May at the trial grounds of the Livingston Seed Co., Columbus, O., showing a section of the peony plantation and the ends of some of the greenhouses. The peony in the foreground is Edulis Superba, one of the best of the soft pink varieties, an early bloomer, large in flower and extremely fragrant. The Livingstons grow peonies for two purposes: For blooms for cutting for their retail cut flower store and for roots for fall sales, both at the store and through their catalogue. They have quite a patch of peonies and find them among the best of the many specialties they handle.

The greenhouse establishment consists of 60,000 feet of glass. A good part of the area is in carnations to supply the retail cut flower department and Enchantress has been their banner variety both in quality and in productiveness. The greenhouse establishment also is used for the production of plants for the catalogue trade.

Part of the Peony Field of the Livingston Seed Co., Columbus, Ohio.

AMERICAN PEONY SOCIETY.

The Test Plots at Cornell.

It has been suggested that as one of committee on nomenclature sent by American Peony Society to assist in work among the peonies at the Cor test plots this season, it would be for me to give an account through columns of the REVIEW of the work s, and the condition of the peonies the plots as we found them, for the efit not alone of the members of the ety, but the large number of florists care more or less interested in peonies the work of the society. I am glad to this, especially in view of the criti s which have been made by some bers of the society, which were no es made public on President Ward's let read to the society at its last meet at Queens, N. Y. Mr. Ward of se has not seen the plots for two s and his impression regarding the ots at Cornell has been formed hearsay and without being aware e great improvement which has been ade about during the last year.

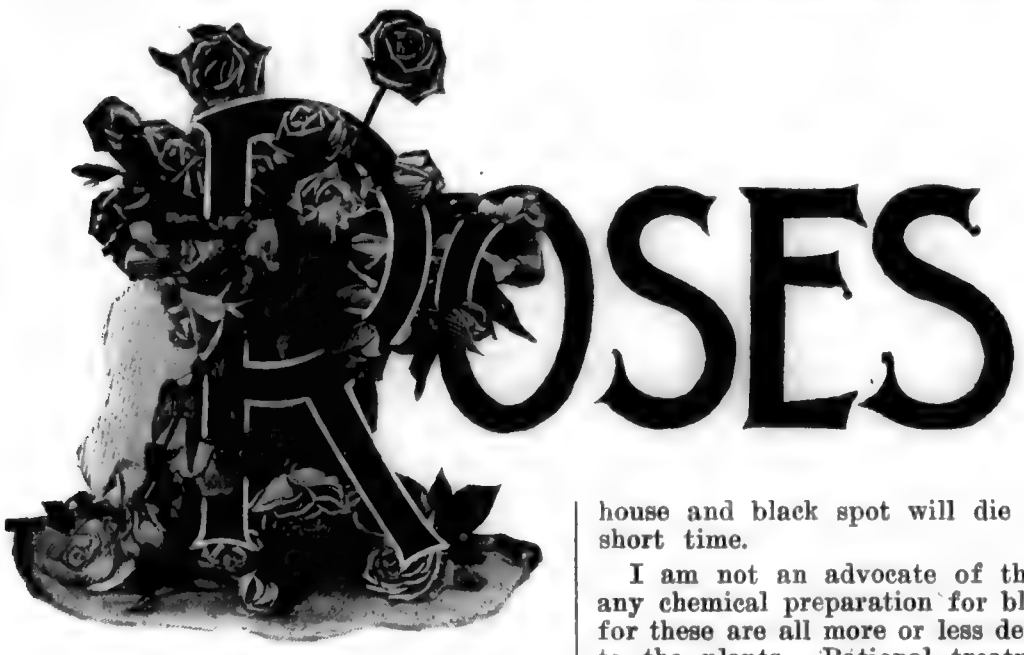
Basis for Criticism.

o get to well for me to meet on the from which these criticisms have n, in order to make it more clear it was due to a few circumstances the very beginning, which, while in tegate in delaying the work, were un table, and for which no one could y be blamed. It must be admitted the first results were disappointing. the peonies were unfortunately ted at a location that was later on ted by the college authorities for purposes, making it necessary to move them to another place. This gave the plants a check from which they had not recovered when the meeting was held at Ithaca in 1907, and it was at once seen that it would require another year's growth before it would be possible to study the peonies properly. Members who came expecting to see a fine display of peonies in the field were disappointed. The ground was a stiff, heavy clay, which seemed as if it might be too wet and many members expressed the opinion that peonies would not thrive there unless the field was thoroughly drained. This opinion seemed verified when, the following year, 1908, after a cold, wet spring, the majority of the plants still failed to show typical blooms.

In spite of all, the meeting in 1907 turned out to be a most interesting one, and the members went home full of enthusiasm and the conviction that the work was well on its way to a successful conclusion. We felt deeply indebted to the university for the work it was doing for the society, to Prof. Craig for his cooperation and hospitality, and to Dr. Coit for the thorough manner in which he had gathered together all of the known peony literature and laid the foundation for effective work, including the publication of the check list, containing a list of all the names of the peonies catalogued at the present day, some 2,700 in all, a large proportion of which were represented by the plants themselves in the test plots.

It was suggested that a new plot be planted, this time the object being to form a collection of only the choicest varieties, each large grower being invited to send from 100 to 150 of what he would consider the best varieties. This suggestion was carried out, and the growing fall collections were sent in by a large number of growers, the new plantation being placed alongside the old one, but on ground lying a little higher.

The meeting in 1908 turned out most unfortunately for the welfare of the society. President Ward was unable to be present; Prof. Craig was in Europe dangerously ill; Dr. Coit had accepted permanent position in Arizona, and the work of the society was in charge of Leon D. Batchelor, who had but recently taken charge, having had scarcely time to become thoroughly conversant with the work in hand. The result was a depressing and discouraging for the society, and the situation for Mr. Batchelor was a most embarrassing one.



The peonies in the original plot again were not up to expectations, and it is scarcely to be wondered at that under the effect of so many depressing circumstances some of the members should become impatient and indulge in open criticism. For it seemed to many of us then that the university had lost its interest and that there was danger that the whole purpose of the experiment would fail.

Suggestions for Betterment.

Suggestions were made by some that peonies be moved to a more favorable location, and by others that the old plot be abandoned and the work concentrated on the new plot. Fortunately, neither of these suggestions was carried out, it being decided that it would be unfair to the original donors to fail to carry out the test along the lines originally planned.

A committee of three was appointed, C. W. Ward, S. C. Harris and myself, to devise ways and means of improving the conditions of the plot and to over-

Concluded on page 9.

BLACK SPOT ON BEAUTIES.

Kindly state the cause and also the best remedy for black spot in Beauties.
O. H. A.

I have grown Beauties for a good many years and have had little trouble with black spot. The only remedy that has been necessary with me was to pick off the affected leaves as quickly as possible and dust the plants with good, dry air-slaked lime through a Peerless sulphur blower or a bellows, getting under the plants so that the powdered lime will rise in the house.

There should be no trouble with black spot on Beauties at this time of the year. The most trouble is in the fall before the grower has his fires going. It is good to keep a little ventilation on at night so there will not be too much moisture in the houses. H. A. BAUSKE.

Through long experience in growing Beauties, and studying the black spot, I have come to the conclusion that there is more than one cause for the trouble; indeed, I think I can name three distinct classes of cases in which Beauty growers get this trouble.

Where the conditions are ideal for Beauties, which means good, rich soil and careful ventilation, black spot is brought on when the plants are kept too dry at the roots for too long a period, at the same time getting too much water overhead. The remedy in this case is to pick all the bad leaves and give the plants several good waterings, but do not syringe for a while, and the black spot will be a thing of the past in a short time.

The Beauty is a strong feeder and where poor soil is used the plants will soon take out what little nutrition there is in it; they will be weaklings from the beginning and as soon as the food in the soil has been exhausted, if nothing is added, the grower will have a bad case of black spot. This is almost a hopeless case, but by careful watering and the use of air-slaked lime in the soil a little improvement in the growth can be made and some fairly good flowers obtained, but the plants will be a long time in regaining their health, if they ever do. In such a case the feeding at first must be slow.

False economy often causes growers to try to grow Beauties without fire heat in the fall of the year, when the nights are damp and cool. This is the time when black spot is most abundant. The remedy in this case is easy. Start the fires and keep the air circulating freely in the house and black spot will die out in a short time.

I am not an advocate of the use of any chemical preparation for black spot, for these are all more or less detrimental to the plants. Rational treatment and careful attention to the needs of the plants will prevent black spot, and good cultural methods will overcome it if it gains an entrance. JAMES PSENICKA.

TERMITES ON ROSES.

A short time ago we sent to the REVIEW an inquiry regarding white termites, and the answer was published on page 12 of the issue of July 8. There was a mistake made in our letter, however, as the information given in it was not entirely correct. The termites do not affect the flower stems, but the main stalk and the roots under the ground. They eat the roots where these join the stalk and, entering the stalk, they eat the interior of it about an inch or two upward. Of course, as soon as they enter the stalk the plant is killed.

They affect every kind of roses, not the white ones only, as stated in our last letter. They also attack the chrysanthemums in a like manner. Please understand that these do not live on the surface of the soil, but underneath, and whatever we get to exterminate these pests must be a liquid that we can pour on the soil. What we should like to discover is a liquid which we could pour on the soil under the plants, and which would dispose of these termites without injuring the roots. We should be pleased to hear from C. W. again. L.

The most effectual way of clearing out this and all other pests which infest the soil is sterilization of the compost before using. As you probably have a steam plant, you could easily accomplish this. If you have no steam, procure some carbon bisulphide and, after preparing your compost, bore holes in it fifteen to eighteen inches apart each way and pour a small quantity in each hole, covering the hole immediately after dropping in the liquid. The fumes from carbon bisulphide penetrate downward and will kill everything living in the soil. It is better to have the compost rather moist, as the fumes are more deadly in moist than dry soil.

You could with perfect safety pour two or three drops of carbon in each pot, but it will be a rather slow task. There is no danger of injuring the roots. For chrysanthemums or roses in benches this is the best of all remedies for destroying every kind of larvæ infesting the soil. Carbon bisulphide is a liquid and the fumes are quite strong. Do not breathe them any more than necessary. Do not use any lighted matches while pouring it out, as it is explosive. I have used gallons of it for pests, both outdoors and under glass, and have found it effectual. I doubt if Nicoticide or other nicotine extracts would destroy your termites. They are useful for root aphis, but have little effect on root-eating pests. C. W.

CARNATION NOTES.—EAST.

Shading Newly Planted Stock.

Under the old plan of housing stock in the fall, little attention was needed in the matter of shade while the plants were becoming established, but with present day methods, when early planting is the rule, the work being over by the last of August, the question of shade is not to be disposed of lightly.

The intense heat of the sun during July and August is extremely trying to recently housed plants, whose root system is practically at a standstill, and to keep them plump until active growth of roots is resumed, moisture must be supplied by spraying the foliage. To accomplish this in the scorching heat under clear glass would require almost constant spraying, thereby wetting the soil to the point of saturation—a condition about as bad as it is possible to imagine. For this and various other reasons, shading is now considered a part of up-to-date carnation culture, the only question being as to the best material, amount to use and method of applying.

Material for Shading.

It would be a waste of space to mention all the undesirable features of using mud or clay wash, when the whole can be summed up and described as "too aboriginal."

After trying many methods, we have for some years used common whiting and water, mixed to the consistency of rich milk and applied inside with a long-handled brush drawn from the ridge downward. It is not essential that every square inch of glass in the roof be coated; in fact, it is well to leave a narrow streak of clear glass next to the bars. If desired, a spray pump can be used, but, though this plan takes less time, it is not possible to apply the wash as evenly as with a brush; besides, much material is wasted.

It is a decided advantage to be able to remove shade at your election and not be obliged to make other applications after rains. The whiting mixture can be easily

removed by a spray from the hose, and by degrees, from such portions of the roof as may be desired.

Our method may not be the best, but for cheapness and cleanliness we have never seen its equal. The fact that the shade produced is not too dense is sufficient to commend it to many.

GEO. S. OSBORN.

A NEW CARNATION SUPPORT.

We have gotten up a new carnation support, which we will try this summer for the first time and may let readers of the REVIEW know later how we like it. Our device consists of an arch, made of No. 9 galvanized wire, twenty-six inches high and seven and a half inches in diameter. This arch is set over the plant crossways of the bench, and three rings, seven and a half inches in diameter, made of old galvanized telephone wire, about No. 14, are fastened to the arch at any desired height with rose-stake clips. Then a wire is stretched lengthwise of the bench and fastened to the tops of the arches with clips, to hold the row of arches in place.

There is no patent on this except on the clips, which we buy of those advertising them in the REVIEW.

DOLE FLORAL CO.

SEASONABLE SUGGESTIONS

Pansies.

While it is still somewhat early to sow pansy seed in the warmer states, in the more northerly ones the last week in July and first week in August is the best time to make a large sowing. Of course, they can be started even a month later with fair success, but if nice, stocky plants are desired before freezing-up weather, it is better to get the seed in by the first week in August. While the popularity of some bedding plants wanes from year to year as popular tastes change, there is never any apparent lessening in the call for pansies. Anyone who possesses the tiniest portion of a garden wants at least a basket of them each spring and there never appears to be any great surplus of them. Take note of any store where a variety of spring plants is offered and in nine cases out of ten the pansies will have first call.

As with all seeds, it is never good policy to buy a cheap mixture. It always proves the dearest in the long run. Perhaps you may save your own seed, but as a general run growers prefer to depend on some one of the many mixtures advertised at this season by prominent seedsmen and pansy specialists. We all like pansies of good size and customers will assuredly snap up a basket containing a few big flowers, just as they will geranium plants carrying a single good truss of flowers, in preference to larger ones without any bloom.

As a general thing the Giant Trimardeau pansy is the most satisfactory of all. Its flowers are of the largest size and the plant possesses great vigor, enabling it the better to withstand our variable climatic conditions. This fine pansy is procurable in quite a number of separate colors. The Mme. Perret strain is a beautiful one, with a wide range of colors, being particularly rich in ruby and wine-colored shades. It is a good variety for growing under glass. Cassier's Giant is another fine strain, the flowers being usually heavily blotched. A few good named pansies to grow for bedding are Kaiser Frederick, brownish red; Emperor William, ultramarine blue; Lord Beaconsfield, deep purple violet, shading to white; Mauve Queen, delicate mauve; Snow Queen, snowy white; Queen of Blues, lavender blue; Psyche, violet blue, with white margin; King of Blacks, coal black; Golden Gem, pure yellow; Cardinal, bright red.

The big pansy specialists usually sow their seeds in beds outdoors. When this is done it will pay the grower who wants only a few thousands of plants to choose a somewhat shaded location. Pulverize the soil thoroughly, water after sowing and either run lath shadings over the bed, a few inches above the soil, or scatter a layer of sphagnum moss to act as a mulch until the seeds germinate. Of course the mulch is only required until germination takes place. It may mean the saving of hundreds of plants, as we often get intense heat about the time pansy seed is sown. A coldframe is excellent for sowing the seed in. It is better to sow in rows a few inches apart, rather than broadcast, as weeding is easier attended to. When in a frame of course no glass covering is wanted, but cheesecloth or lath shading must be used until the seedlings are well above ground.

Tufted Pansies.

The violas, or tufted pansies, should not be forgotten where plants for spring bedding are in demand. They bloom much more freely than the larger pansies and are admirable as a groundwork for tulips, hyacinths and other spring bulbs, making a fine display until summer bedding plants are ready to go out. In Europe these violas are immensely popular, being grown by the millions for summer bedding. Here, unless a somewhat shaded location is given and occasional waterings afforded, they cannot be depended upon as summer bloomers. The following are fine bedding varieties: Blue Perfection, purplish blue; White Perfection, pure white; Mauve Queen, light blue; Papilio, violet lilac; grandiflora lutea, golden yellow.

The small-flowered Viola cornuta and its white variety are better propagated from cuttings, which are abundant in late fall. These can be carried over in a coldframe; they do not come true from seed.

Double Daisies.

Double daisies can be carried over as perennials with light protection, or can be divided in the fall, but they are so easily raised from seed that it is much better to raise a fresh batch annually. Seed sown now will give nice plants for spring sales. The seed germinates quickly. Keep the bed shaded to have the best results. The daisies can be had in several colors, which include red, pink, pure white and bright rose. The seeds of these should be sown thinly, or the little plants will soon become crowded and spindling.

Myosotis.

The first week in August is a suitable time for the main sowing of myosotis. The call for forget-me-nots, like that for pansies, never shows any decline. It is one of the plants which no commercial grower can afford to be without. The seeds should be sown in a shaded frame and transplanted on cool, cloudy days, when the ground is moist. The variety Myosotis alpestris Victoria, bright blue, is a fine bedder, as is also the selection Eliza Fonrobert. Dissitiflora is a well-known forget-me-not, of an exquisite blue color. Royal Blue possesses greater vigor than the other sorts and is specially adaptable for pot culture or planting along the edges of benches. Sylvatica is a good bedding variety, with a more spreading habit than the other sorts named.

There are pink and pure white varieties of M. alpestris Victoria, compact growers and extremely neat for bedding. As a general thing, however, it does not pay to grow too many of these colors; people always associate the blue color with forget-me-nots.

Various Hardy Plants.

Provided seed has not already been sown, the present is a suitable time to make sowings of any of the following, all of which will flower next season: Arabis alpina, Alyssum saxatile compactum, Coreopsis grandiflora, Gaillardia grandiflora, hollyhocks, Delphinium grandiflorum, digitalis, Gypsophila paniculata, Hesperis matronalis, Papaver orientale, Physostegia Virginica, Scabiosa Caucasica, lychnis in variety, and Chrysanthemum maximum in variety.

Sweet Peas.

It may seem passing strange to speak of the necessity of procuring and sowing seeds of sweet peas where the same are wanted under glass in October, but we are now more than a month past the longest day and the early part of August is the time to start a batch of peas for forcing. The seed is often hard to germinate in hot weather. If you can obtain the new crop of seed, all the better. We like to sow in flats of clean sand, later potting the seedlings off and keeping shaded for a few days, until they become established. If the little plants can be kept in a coldframe for a time to stiffen them, they will do better than if planted directly into the beds. Unless a roomy house is at disposal, it it better not to start any early sweet peas. In a small structure they get such a roasting as to weaken them and make them an easy prey for red spider. The best varieties for early forcing are Christmas Pink, Mont Blanc or Florence Denzer, pure white; Mrs. Sim, salmon, and Mrs. Alex. Wallace, lavender. The pink and white varieties proved the most popular sellers.

Sweet peas grown outdoors are now the most popular flowers on the markets in all parts of the country. With a little attention they will render a good account of themselves for some time yet. There are times of glut with these, as

with all other flowers, but where suitable colors are grown and the plants are mulched, occasionally watered and seed pods carefully removed, they will bloom for a long time yet. It is, indeed, surprising to see what superb peas can be grown in light, sandy soil if only water and mulch are provided. They equal blooms produced on heavy soil. Only a few colors take well in the markets. Separate shades will sell, but mixtures are not wanted. Take note of desirable varieties seen and plan to grow them another season.

SOUTHERN SOCIETY DISBANDS.

Necessary Support Was Lacking.

The Southern Florists' Association was disbanded at the annual meeting held July 15 in the clubhouse at Milneburg, La., over the wind-swept waters of Lake Pontchartrain. The end came after a long and determined fight to stimulate interest among florists of the south and bring about a hearty coöperation in all things pertaining to horticulture. A number of members of the association joined the ranks of the New Orleans Horticultural Society, giving it more strength and fresh impetus.

The association was organized a little more than four years ago, and for a long time the florists of the south took an active interest in its affairs. Its discussions of horticultural subjects at its annual sessions were of great interest to florists of the south and the north as well. In the last two years interest was found lacking, though everything was done to bring the members together. It was found that many of the members could not attend the sessions, and they devoted little time to getting in touch with each other.

From the failure of the Florists' Association the New Orleans Horticultural Society gains strength. The meetings of the Southern Florists and the Horticultural Society were held at the same time and place. Following the meetings the members of both organizations enjoyed a sumptuous dinner at Moreau's restaurant.

The session of the Florists' Association was devoted mostly to a discussion of condition. The members realized that it was a matter of impossibility to keep the association together without the assistance of its members. The secretary said that there was only one member, outside of New Orleans, who took an interest in the society. It was decided to disband, without taking any further steps at resuscitation.

The session of the Horticultural Society was fraught with interest. The principal event was the election of officers to serve during the coming year. The following officers were elected: A. Alost, president; Herman Doescher, vice-president; C. R. Panter, secretary, and John Eblen, treasurer. Richard Eichling, one of the popular members of the society, was nominated for the vice-presidency, but he declined, and retired in favor of Mr. Doescher. Secretary Panter, who was reëlected, will enter upon his sixth term. He has done a great deal in the interest of the association, and the members are wideawake to his value as an officer. He has served in the capacity of treasurer for twenty-six years.

After the meeting adjourned the members marched to Moreau's restaurant, near the end of the long pier, where a sumptuous fish dinner was awaiting them. The dinner was a thoroughly enjoyable affair. The spirit of conviviality predominated. There were bright speeches by the retiring officers and some of the invited guests. The officers elected at the meeting were also heard from. There were other short talks and stories by Ed Baker, J. A. Newsham, Richard Steckler, C. W. Eichling, Charles Eble, H. Papworth. On behalf of the retiring officers, H. Sherman made a brief address.

The outing was one of the most successful ever given by the society, and the members were loud in their praises of the gentlemen of the committee who worked so hard and faithfully to make it a success. The committee was composed of Messrs. C. R. Panter, chairman; Henry Cook and Paul Abele. The floral decorations were furnished by Richard Eichling.

.....BUSINESS AND OTHER NOTES.....

Fremont, Neb.—A florist, C. H. Green, is president of the Nebraska State Horticultural Society, in session this week at Beatrice.

Woburn, Mass.—John Newman, on Willow street, Cummingsville, is erecting another greenhouse, 500 feet long. This makes five houses in all.

Rutland, Vt.—P. F. Potter, manager of the floral department at the Abraham Drug Co., is spending a three weeks' vacation at Cedar Beach, Lake Champlain.

Newport, R. I.—At the meeting July 13, James Robertson, president of the Newport Horticultural Society, exhibited the Lyon rose, the first time it had been seen by most of the members.

Colfax, Ia.—W. H. Drake, formerly in business at Kenosha, Wis., is now in charge of floriculture at the new Hotel Colfax here, where greenhouses covering about 16,000 feet are to be built this season.

Lansing, Mich.—The Maplewood Violet and Nursery Co. has closed out its nursery department. The firm will hereafter do business as the Maplewood Violet Co. at the same place, corner of Washington and Mount Hope avenues.

Greensboro, N. C.—Edward Duffy, for a number of years florist for Caesar Cone, has taken a position with W. C. Porter & Co., florists, Cedar street extension. Howard Gardner, proprietor of the Summit Avenue Greenhouses, is improving his place by adding a house 27x60.

Chicago, Ill.—At a recent meeting of the Federation of Labor delegates of the Florists' and Gardeners' Union asked that the board of directors of one of the amusement parks of the city be placed on the unfair list because of the employment of a nonunion florist. The Federation refused the request.

Waterbury, Conn.—Frank Floto, of Saxe & Floto, has recently had in his care a little girl, 5 years old, who was brought from the Philippines after being abandoned by her father, an American soldier in the islands. Mr. Floto took measures to adopt the child, but it seemed possible that certain legal obstacles might prevent his doing so.

Marquette, Mich. — The Sorensen Greenhouses, until recently known as the Stafford Greenhouses, have moved their downtown store from the Mack block into the structure known as the Donckers building. This building has been thoroughly renovated and repainted, and the new store will be one of the most attractive and convenient flower salesrooms in the upper peninsula.

Concord, N. H. — E. G. Blagrave, grower for G. J. Benedict, is enjoying a vacation in England.

Lincoln, Neb.—L. C. Chapin is a member of the committee on legislation of the Nebraska State Horticultural Society.

Rockford, Ill. — George Moncur, for some time employed with J. J. Soper, is planning for a three months' vacation in Scotland in the near future.

Chattanooga, Tenn. — John Karsten says that for the central south there is no better rose than Golden Gate; he finds it his most profitable variety under glass.

Portland, Me.—A firm of florists has been incorporated here under the name of Dyer's, with a capital stock of $5,000. The officers are: President, Henry G. Beyer, Jr.; treasurer, Albert W. Dyer.

Woodridge, N. J.—Madsen & Christensen, who have four houses devoted to gardenias and wallflowers for cut flowers, and daisies, both for cutting and for sale in pots, are erecting another large house.

Allegan, Mich.—George Conklin has moved his Grandville greenhouses to this place and will re-erect them on the property of Conklin & Hudson, on Ely street. Mr. Hudson's family have also arrived here.

Beatrice, Neb.—The Dole Floral Co. will soon begin the erection of a two-story store and office building, one room of which, at 518 Ella street, will be used by themselves as a plant and cut flower store.

New Orleans, La.—Trade here is decidedly quiet, but there are so few good flowers that the stores have to draw on northern markets for the material with which to satisfy the few remaining customers.

Albany, N. Y.—The Albany Florists' Club has set out to give a first-class flower show in November. The committee in charge is working hard. Its officers are Fred A. Danker, chairman; Louis Menand, treasurer; Alfred D. Wemple, secretary.

Cleveland, O.—The incorporators of the Jones-Russell Co., which is about to open a new retail store, are Harry B. Jones, A. E. Feikert, Charles E. Russell, Obed C. Billman and George H. Billman. The capital, as stated in the Review of July 8, will be $5,000.

Moline, Ill.—The annual picnic of the Tri-City Florists' Club was held at Walnut Grove, near this city, July 15. The committee in charge, consisting of A. Anderson, Henry Gaethje and Henry G. Pauli, had made thorough arrangements for the entertainment of the company.

SOCIETY OF AMERICAN FLORISTS

Preliminary Program.

Secretary W. N. Rudd has announced the preliminary program for the Cincinnati convention, as follows:

TUESDAY, AUGUST 17, 1909.

1:30 P. M. Organ Concert.
2:00 P. M. President Valentine's Address.
Report of the Committee on President's Address.
Discussion.
Reports of Officers, Committees, etc.
Miscellaneous Business.
Judging of the Trade Exhibits.
8:00 P. M. President's Reception.
President Valentine hopes to meet as many as can attend and wishes it distinctly understood that formal dress is not expected, but that the most comfortable costume will be the most appropriate.

WEDNESDAY, AUGUST 18, 1909.

9:00 A. M. Organ Concert.
9:30 A. M. Illustrated Lecture, "The Value of the Recent Work in Heredity to the Practical Flower Breeder," by Jesse B. Norton, Washington, D. C.
Discussion.
Question Box.
11:00 A. M. Selection of Next Meeting Place. Polls Open One Hour.
Nomination of Officers for 1910.
Reports of Judges of Trade Exhibits.
Annual Meeting Ladies' Society of American Florists.
2:00 P. M. Organ Concert.
2:30 P. M. "The National Flower Show—Past and Prospective" and Special Matters.
8:00 P. M. Illustrated Lecture on Color Photography, by J. Horace McFarland, Harrisburg, Pa.

THURSDAY, AUGUST 19, 1909.

9:00 A. M. Organ Concert.
9:30 A. M. Address, "Some Work of the U. S. Department of Agriculture as Affecting Floriculture," by B. T. Galloway, Washington, D. C.
Discussion.
10:30 A. M. Election of Officers. Polls will remain open two hours.
Amendment to the By-Laws.
The following amendment, having been submitted to the Executive Board and accepted by them, will be voted upon at this time:
Amending Article 4, Section 2, as amended previously at Niagara Falls in 1908, by striking out the figures $25 in said article as above amended, and inserting in place thereof the figures $50, meaning and intending to advance the fee for Life Membership from $25 as now obtaining to $50.
The Question Box.
2:00 P. M. Bowling Contest and Other Sports.
2:00 P. M. Meeting of the American Carnation Society.
2:45 P. M. Meeting of the American Rose Society.
3:30 P. M. Meeting of the National Sweet Pea Society.
4:30 P. M. Meeting of the Florists' Hail Association.
7:30 P. M. Organ Concert.
8:00 P. M. Paper, "The First Meeting of the Society," by the First Secretary, E. G. Hill.
Address, "What the Society Has Accomplished in Twenty-five Years," by J. C. Vaughan.
Addresses by Past Presidents.

Note.—The first meeting was held in Music Hall, the same place as has been selected for the twenty-fifth meeting. President, John Thorpe; vice-president, Robert Craig; treasurer, Myron A. Hunt; secretary, E. G. Hill.

FRIDAY, AUGUST 20, 1909.

In the hands of the Cincinnati Florists' Society.

CINCINNATI.

The Market.

Business is entirely satisfactory for this time of the year. The supply of stock is good, and the demand is just about enough to move it out. All lines of stock are bringing good prices, and anything that can be called special brings about as much now as in midwinter. The growth of summer business has been steady. A few years ago, when July 4 arrived, we figured business would be nothing to speak of till the mums arrived, and that we would be money in pocket if we could close our stores. That is all changed now. Summer business has increased to such an extent that it not only pays expenses, but there is a little margin of profit in it. Whether this is due to the fact that there is more demand for flowers now cannot be determined, but one thing is certain, the growers, as a rule, are paying more attention to the summer demand. They are taking the trouble to grow stock to take care of this demand, and are learning what sells best and how to grow stock in the summer time for best quality. Now that the summer, it is buying them right along. All these things are making the summer business what it is, and there can be no question about its increasing from year to year. This is something that no florist can afford to overlook, for with a fair profit all during the summer season, his net profits for the entire year will be greatly increased.

Lilies are meeting a good demand this summer. Asters are having a large call and bringing good prices. Gladioli are doing fairly well. Great quantities of this flower are being grown now, and are shipped in from all quarters. Beauties head the list in roses, and sell well. My Maryland is the finest summer rose in pink we have ever seen. It sells on sight. Rhea Reid is also a fine thing, especially when it comes to holding in hot weather. Good white roses are none too plentiful. Kaiserins are good property. Carnations are still with us, and sell well. All green goods are in good supply and selling nicely.

Convention Preparations.

It has been decided to hold the ladies' bowling contest in the afternoon of Wednesday, August 18, instead of August 19, as planned at first. As the men's bowling contests will be held on the latter date, the two conflicted, so it was decided to make this change, in order that there should not be two bowling contests going on at different places at the same time. This arrangement gives everyone an opportunity to view both contests if so desired.

A meeting of the ladies' committee was held at L. H. Kyrk's wholesale house the afternoon of July 19. Miss Edith Kyrk, 3446 Reading road, Avondale, is secretary. At the meeting July 12, the ladies were serenaded by a colored band from Kentucky, whose efforts were greatly appreciated.

Thursday afternoon, August 19, while the men's bowling and shooting contests are in progress, there will be a car ride given for those who wish to see the city. It will take in all points of interest about Cincinnati, and will occupy three hours. This will give a fine opportunity to see Cincinnati.

Wm. Murphy, superintendent of the trade exhibit, is now receiving telegrams from anxious exhibitors asking him to reserve space. They are showing good judgment in this, too, as the entire lower floor of the exhibition hall has about been taken. There is still some space at that, but don't delay any longer. No one with anything worth exhibiting can afford to be absent from this show. Address the superintendent at once at 311 Main street, Cincinnati, O.

R. Witterstaetter, chairman of the finance committee, has been doing some good work, and now reports collections about all in. This is encouraging, to say the least, for without the cash we would not be able to go very far.

The souvenir book will soon be ready for the mail. This book is a decided success, both from an artistic and financial point of view. The committee, consisting of Dan Carmichael, J. W. Rodgers and Geo. S. Bartlett, has put in some hard licks on this book, and is deserving of a great deal of credit for its successful issue.

Various Notes.

Nick Weber and wife are away on their annual trip into Michigan.

E. G. Gillett attended the Heller funeral in New Castle, Ind., July 12.

C. J. OHMER.

BOSTON.

The Market.

There is little now to report of cut flower conditions. Business is quiet, and the wholesale markets, commission houses and retail stores all have a semi-holiday appearance. Good roses are not plentiful. Kaiserin leads, but some good Beauties are seen, also a few My Maryland and Carnot. Of Richmond the samples set out are inferior. Carnations are small and poor, many having the appearance of being affected by spider. Sweet peas are in overwhelming supply, and the bulk are only cleared at low rates; 300 for 25 cents leaves little profit for the grower. They are more in evidence than any other flower at present.

Asters are yet only seen in limited numbers. Of Lilium longiflorum, L. auratum and L. speciosum, a good supply is forthcoming. The two last named sell slowly. Gypsophila and bachelor's buttons are abundant. For a variety of outdoor flowers there is little call. These now include asters, cosmos and gladioli.

Hardy ferns are not so good, and are making $1.50 per hundred. Adiantum and asparagus continue of good quality, but the demand is rather poor.

Sweet Pea Exhibition.

Although no prizes were offered July 17, there was a first-class show of sweet peas and other seasonable flowers at Horticultural hall. The largest exhibitor of sweet peas was M. F. Plant, T. W. Head gardener, who had 200 vases. Girand Foster, of Lenox, Edwin Jenkins gardener, had a nice collection, including some excellent novelties. J. O. Christenson, gardener to W. J. Clemson, had seventy-five vases; William Whitman, M. Sullivan gardener, 110 vases; Francis Skinner had a large display, other collections coming from W. N. Craig, W. A. Riggs, T. D. Hatfield and others. Some of the most desirable varieties noted, from a commercial standpoint, were Romona Spencer, Maid of Honor, John Ingman, Dorothy Eckford, Bolton's Pink, Apple Blossom Spencer, Asta Ohn, Mrs. Routzahn Spencer, Miss Willmott, Countess of Northbrook, Frank Dolby, the best lavender variety; James Grieve, splendid pale yellow; and Gladys Unwin.

R. & J. Farquhar & Co. put up a finely arranged group of herbaceous perennials, covering 500 square feet of space, in competition for the society's gold medal. They also showed amaryllis and Calla Elliottiana grown outdoors. Bellevue Nurseries had a capitally arranged bank of perennials. Other displays of these flowers came from T. D. Hatfield, F. J. Rea, Old Town Nurseries, W. A. Riggs and others.

Mrs. E. M. Gill had in her display some excellent dahlias. William Thatcher showed Francoa ramosa, hollyhocks and

pentstemons. T. D. Hatfield had fine Browallia speciosa in pots. W. A. Riggs had a capital new seedling delphinium. Thomas E. Proctor, James Marlborough gardener, received a silver medal for a collection of nectarines, peaches and pears in pots.

A basket of the so-called Wonderberry in the fruit department and a fruiting plant in pot of the same Burbank creation excited some interest. Robert Cameron and other authorities pronounced it to be Solanum nigrum, and absolutely worthless. Some who had courage to taste the fruit were of the opinion that they would prefer a quart of blueberries to a barrel of Wonderberries. Next year Wonderberries will be as scarce around Boston as Burbank potatoes have been for some years.

Various Notes.

Nothing but pleasant weather is needed to insure the complete success of the Gardeners' and Florists' Club's picnic at Randolph Grove July 28. A handsome lot of prizes has been secured, and there promises to be a keen rivalry for their possession. The committee in charge of arrangements has worked hard. Tickets are selling fast, and everything points to a big attendance. Class 6 in the athletic program will be a 100-yard handicap race for boys under 18.

Thomas F. Galvin is out with a strongly-worded advertisement in the daily press denunciatory of those florists who persist in making a practice of soliciting funeral work.

F. Roberts, of W. E. Doyle's force, is enjoying his vacation at Sterling, Mass.

William Nicholson, for so late in the season, is sending in an unusually fine lot of fancy carnations.

J. Newman & Sons' windows, on Tremont row, contained an unusually attractive display of sweet peas and lilies last week.

W. W. Rawson & Co. are making a fine display of sweet peas in T. F. Galvin's Tremont street store, which attracts considerable notice.

The shareholders and stallholders of the Park street market will hold an important meeting July 24, to decide whether they will hire more commodious quarters, centrally located, or remain as at present.

A. W. Kidder, the violet specialist, is spending his vacation at the Rangeley lakes, in Maine.

William Carr, salesman for the W. W. Edgar Co., left July 26 for a visit to St. John, New Brunswick.

Willow Hill Greenhouses, of West Roxbury, are sending quantities of callas to the Park street market, equal in quality to those seen in midwinter.

The next exhibition at Horticultural hall will occur August 7 and 8. Perennials, phlox, annuals and herbaceous plants will be special features.

The leopard moth has appeared in considerable numbers on shade trees in Boston and vicinity, and will be found a difficult foe to combat.

The town of Newton has this season spent $150,000 in the war on insect pests, including gypsy moth and elm beetle. A force of 135 men and a number of power sprayers have been employed, and their work has been well done. W. N. C.

C. Willard Smith.

LOW'S BUSINESS CHANGE

In the REVIEW of June 24 I noted the announcement of the change which has taken place in this firm, and also the letter written to the REVIEW by our Mr. Barnard. In some way, an error has crept into this letter, and I would beg the favor of your space to correct it.

The firm that I have formed has taken over the nurseries, both here and in the country, occupied by the late firm of Hugh Low & Co., now dissolved, together with the larger part of the orchids and the whole of the other stocks, and has been fortunate in retaining practically the whole of the staff of the late business, but as neither the book debts nor good will were included in the transaction, and as my late partner in the old firm intends carrying on business in the country, it was mutually agreed that there were to be no "successors" to the late firm. STUART H. LOW.

OBITUARY.

C. Willard Smith.

C. Willard Smith, a traveling man for many years employed by the Leonard Seed Co., Chicago, met his death by drowning in Lake Michigan on Sunday morning, July 19. He had been playing tennis with his brother, Albert H. Smith, who is office manager of the Leonard Seed Co., and after finishing the game he told his brother that he would take a dip in the lake near the Chicago Beach hotel before he went home. The sea was running quite high on the lake and the supposition is, Mr. Smith being somewhat warm, that striking the cold water gave him cramp. He dived off the pier and was in deep water. Apparently he did not have strength enough to contend against the strong wind and high waves, although he was an excellent swimmer.

Charles Willard Smith was born in Richview, Ill., in 1876. His boyhood was spent at that place and at Lawrence, Kan. At the age of about 16 years he removed to Chicago and was with the Commercial National Bank until he was 21 years old, at which time, finding that the indoor work in the bank was not good for his health, he decided to get an outdoor position and took the situation as seed traveler with the Leonard Seed Co., which firm he has been with from that time until now, a period of about twelve years.

Mr. Smith had many friends in the trade, and many among the canners who deal with the seedsmen. He has covered all the eastern portion of the United States, from the Gulf north, and all of the central states, having a large trade acquaintance in all of the states of the Union east of the Mississippi river. He was a young man highly thought of by the trade, a keen trader, a good mixer, genial and aggressive. His many friends will miss him, and so will the house that he so ably represented for so many years. Mr. Smith was not married. The only near relative he leaves is his brother Albert H. Smith. Mr. Smith had just returned from a trip, and was enjoying a few days' vacation when the terrible end came.

Otto C. Lenz.

Otto C. Lenz, of Providence, R. I., who in the later years of his life took an active interest in floriculture, died July 10, of lung trouble. He was born in Stuttgart, Germany, May 18, 1837. He came to this country about fifty-five years ago and settled in Warren, R. I. On removing to Providence, he went into the manufacturing of jewelry and shortly after became a member of the firm of William Smith & Co. About twenty-five years ago he retired from active business life and had since devoted his time to the study of

horticulture, growing a varied assortment of plants in his greenhouse on Camp street.

John Thorpe.

"Uncle John" Thorpe, pioneer florist and first president of the S. A. F., passed peacefully away at his home in Chicago on the morning of Thursday, July 15, after a long illness.

John Thorpe was born in Keyhan, Leicestershire, England, April 3, 1838. His love of flowers was an inheritance from several bygone generations, for his ancestors for two centuries had been horticulturists. In childhood he attended the village school, but most of his education, both general and technical, was acquired in the school of practical experience. To a greater extent than is true of most men, he absorbed knowledge continually while engaged in his daily work, until he became unusually well informed as a botanist and naturalist as well as horticulturist.

After learning the rudiments of gardening from his father, he was apprenticed, at the early age of 12 years, to his uncle, a skillful gardener. In this way he received practical training, while still a mere boy, in all the varied details of gardening, and as a horticulturist he gave early proof of the ability which made him in the prime of life one of the foremost men of his profession. After serving his apprenticeship he took charge of the estate of his cousin, T. Turner, of Little Thorpe, remaining there until 1863, when he went into business as a market gardener at Bristol. In 1868 he engaged in the nursery business, in company with a Mr. Bell, at Stratford-on-Avon.

His activity in connection with flower shows began when he had scarcely reached the age of manhood. The first show for which he was responsible was held in Kensington Gardens, London, nearly fifty years ago. Later he was identified with shows held in the Crystal Palace and in the Royal Botanic Gardens, also in London, and with scores of other shows held throughout England, Scotland and Ireland.

Early in his career he received the distinction of being created a Fellow of the Royal Horticultural Society of London, and although he would certainly have been excusable if he showed a little pride in appending the letters F. R. H. S. to his name, yet he never made any display of the title.

Mr. Thorpe was married on Christmas day, 1863, to Miss Clara Soars, the daughter of a well-to-do farmer of Leicestershire. They have had a family of six children, all of whom were born in the neighborhood of Stratford-on-Avon, and four of whom are still alive. Mrs. Thorpe died June 8, 1901.

In 1872, accompanied by his wife and family, he came to America and soon became a prominent figure in the trade in the vicinity of New York city. Not long after his arrival here, he became deeply impressed with the fact that one of the great needs of the florists of America was organization, and he began to argue persistently in favor of the formation of societies and clubs for mutual helpfulness. He was one of the most active participants in the work of organizing the Society of American Florists in 1884 and 1885, and he was a charter member of the society. He was elected president of the meeting for organization, held at Chicago, June 19, 1884, and was president during the first

John Thorpe.

two years of its history, presiding at the conventions held at Cincinnati in 1885 and at Philadelphia in 1886. He was a regular attendant at the annual meetings until within the last few years. Mr. Thorpe was also one of the most diligent workers in the organization of the American Carnation Society and the Chrysanthemum Society of America, and few, if any, accomplished more than he in bringing the chrysanthemum into popular favor.

For the first few years after his arrival in America Mr. Thorpe took care of Gordon park, in Cleveland, O. Then he went to Queens, N. Y., where he was for six years a member of the firm of Hallock, Son & Thorpe. In 1887, after the dissolution of this partnership, he bought what was known as the old Hanft property, including about 20,000 square feet of glass, at Pearl River, N. Y. He made the chrysanthemum a leading specialty and continued in business there until 1891.

Mr. Thorpe managed the first flower show held in Madison Square Garden, New York, and for eight years he was secretary of the Horticultural Society of New York, of which he was also a charter member.

One of the clearest evidences of Mr. Thorpe's standing in his profession was his appointment, in 1893, as the chief of the Department of Floriculture at the World's Columbian Exposition at Chicago. It was frankly acknowledged by the trade and by the directors of the fair that Mr. Thorpe's ability and untiring energy constituted one of the chief factors in the success of the floricultural department.

He laid out the Wooded Island and the Rose Garden at Jackson park, Chicago. He was manager of the first two flower shows at Kansas City, in 1902 and 1903, the memorable exhibitions that may be truly said to have introduced a new era in the exhibition of flowers.

Since that time, except when managing an occasional flower show, Mr. Thorpe has been employed chiefly in caring for the gardens and landscape work of municipalities, corporations and private citizens. He also had leisure to write occasionally for different newspapers and horticultural magazines.

He is survived by a son, John Thorpe, of Tarrytown, N. Y., and by three daughters, Miss Thorpe, Mrs. Flint and Mrs. Romaine, of Chicago. He also leaves seven grandchildren.

The funeral was held Saturday, July 17, from the home of his daughter, Mrs. Flint, 3519 Princeton avenue, and was attended by many in the trade. The remains were cremated and the ashes interred upon the same ground in which Mrs. Thorpe was laid away a few years ago.

DENVER, COLO.—There was a hail storm here early in July that broke some greenhouse glass, but did not do any serious damage.

THE REVIEW sends the Florists' Manual, by Wm. Scott, postpaid, for $5.

RESULTS.
We give them. You get them.
We both have them.

PITTSBURG has begun to smoke up again.

THE Scottish Pansy Society has had a prosperous existence of many years.

JOHN M. GOOD says that those who know Peony Duchesse de Nemours are stocking up on it.

IN free trade England this season the price of greenhouse glass has been practically the same as in highly protected America.

WE think we can hear Patrick O'Mara chuckle as he reads the things said of Burbank and his nightshade by some of the farm papers.

THERE will be an effort at the big orchid exhibition in Boston next year to revive the national organization undertaken a year or so ago, but temporarily abandoned.

BEAR in mind that you can almost invariably judge of a man's character, as well as of his prosperity, by the cleanliness and order that prevail in his place of business. On this evidence, what will be the public's estimate of you?

THE planting of chrysanthemums on the benches in the states south of the Ohio is not begun until after the work generally has been finished in the north, because early planting, under the influence of the warm climate, results in too tall growth.

THE trade in England is having much trouble because of the law requiring a license for the sale of poisons, which includes horticultural insecticides. Whenever a member of the horticultural trades applies for a license the pharmacists make opposition.

No, it isn't true that every florist who amounts to anything has a printed letterhead. There are hundreds of growers and others who are making a good living at the trade who still send out their orders and other communications on plain paper, unbusiness-like as that may seem.

CREDITS AND COLLECTIONS.

In a certain wholesale house there hangs a neatly lettered sign:

"The man who refuses credit to the irresponsible and who demands prompt settlement when bills are due may not have the largest business, but it is safe to say he lives as well and sleeps as soundly as his less conservative competitor."

The florists' business, in too many instances, is conducted as it was in the days when its problems were those of production rather than of distribution, as they are today. Times change, and with them conditions alter. The man whose methods do not improve to meet the changed circumstances under which the business must be conducted is working at a disadvantage; he will inevitably fall short of the satisfying results which he might obtain were his practices in keeping with those of progressive business men.

In the florists' trade, from source of supply to the ultimate consumer, there is no weakness so great as that of lax credits and slow collections. Few industries could make progress with so great a handicap. That the florists' trade has made the remarkable growth of recent years is due to the fact that, in far greater proportion than in most other lines, demand has been greater than the supply and margins of profit excellent. With the present tendencies toward a reduction of the margin of profit to more nearly those of other lines, the merchandizing problems will require more attention from those who wish to stay in the front rank. Lax credits mean slow collections, and slow collections are an obstacle to progress.

It will be observed that those retail florists who follow up-to-date methods are the ones who pay their bills most promptly, and that the wholesalers who "refuse credit to the irresponsible and who demand prompt settlement when bills are due" usually, in fact, do have the largest business. Their other methods are in keeping with their good policy on credits and collections.

SOCIETY OF AMERICAN FLORISTS.

Registration of Rose.

Wilmer W. Hoopes, of Hoopes, Bro. & Thomas Co., West Chester, Pa., offers for registration the following rose: Name—Climbing American Beauty. Parentage—An unnamed seedling crossed by American Beauty. Growth—Of strong climbing habit, making shoots of ten to twelve feet in a season. The foliage is a rich, dark green, free of mildew or black spot. Color and form of flower are similar to its pollen parent, American Beauty, four to five inches in diameter. It blooms very profusely in June and occasionally all through the summer. The plant is hardy, having withstood a temperature of 5 degrees below zero without injury to even the tips of the shoots.

The application for this registration having been submitted to the American Rose Society and not having been objected to by them, the registration is completed under the rules of this society.

W. N. RUDD, Sec'y.

July 16, 1909.

CHICAGO.

The Great Central Market.

So far as business goes, there is little change in the market. The demand is seasonable, nothing more. There continues to be a fair call for Beauties and good roses, with an occasional good shipping order for first-class peonies, but the local demand is almost wholly for funeral work and the larger part of the receipts bring extremely low prices.

The supply of Beauties has decreased and the quality with most growers has retrograded, so that it is now more trouble to fill orders, though good stock can be had if the buyers are willing to pay the price. Some of the growers are now cutting fine, long stock from the plants grown specially for summer.

Of other roses, the leaders are My Maryland and White Killarney. The best grade of My Maryland is easily the finest thing now available in the rose line, although the short My Maryland are of comparatively little value. White Killarney is coming in from quite a number of growers, but there is a wide variation in quality. Some are cutting stock two or more feet long, with good flowers, while others are getting nothing more than 6-inch stems. The best grade is selling readily at 10 cents to 12 cents, while the shortest grade meets with almost

BEAUTIES

Our Famous Summer Crop

Not only by far the Best in the market, but much the largest supply. Fancy long stock and plenty medium and short, all with good heads and fine color. We hope to hear at once from every Beauty buyer.

Roses

Kaiserin is excellent with us, Killarney and Richmond are good and we have Maids and Brides that are good for this time of year. Send us your rose orders.

Peonies

Our Peonies are excellent; they invariably give satisfaction. Nothing better for either funeral sprays or mid-summer decorations.

Lilies

We have a fine crop of Easter Lilies that are just the thing for hot weather work, also a nice lot of Auratums.

Gladioli

Finest America "Glads" to be found in this market; also extra good Augusta (white). You will find these are what you want.

Green Goods

The best Ferns in the market, $1.00 per 1000. Long heavy strings of SMILAX, Farleyense and Adiantum.

no market, as there are short Kaiserin and short Bride that are preferred for funeral work because they are whiter. Killarney is of good quality and about the best selling rose in the market today, as it has been all spring. Good Richmond are available, but there is slight demand for them.

Asters are coming in slowly, and such as are good meet with a ready sale at fair prices. Gladioli have become abundant. There are some fine America, and this and Augusta have the call; other sorts bring cheap prices.

The receipts of carnations are much less than a week ago, for at last the growers are throwing out and replanting. The result has been an improvement in the average price of carnations, though quoted prices are unchanged; the necessity for the sacrifice of such a large proportion of the receipts has passed, that is all. The wholesalers generally are looking for first-class summer carnations to become good property within the next few days.

There continue to be ample supplies of peonies of all grades; 50 cents now buys good white, though the finest occasionally bring a little more; but there are quantities coming out of storage in condition such that the better flower stores cannot use them, and these are sold at whatever they will bring, some not being salable at any price.

Sweet peas are less abundant and the quality also has run down. There still are a few indoor peas, but the bulk are from plants outside. The fancy long stock sells at cheap prices, but short, and especially the white, go to waste in considerable quantity.

Among the best flowers of this day are the Easter lilies and auratums, which are in fair supply and selling steadily. Shasta daisies are less abundant, but there are increased quantities of mignonette.

Greens are quiet; there is enough of everything, and no special activity in the demand.

All the wholesale houses are now closing at 5 p. m., and for Thursday, July 22, the hour was set for 1 o'clock, so that everyone could attend the Florists' Club's picnic.

The Corporation Tax.

The corporation tax included in the pending tariff bill is no less an injustice because it now seems likely the tax will

Mention The Review when you write

be only one per cent of the net earnings over $5,000 of corporations. Applying it to some of the firms in this market, Poehlmann Bros. Co., with the stock practically all in the hands of three brothers and none outside of the family, will be obliged to pay the tax, while Wietor Bros. and Bassett & Washburn, each with two members of the firm, will be exempt. The A. L. Randall Co., with practically all the stock in the hands of three people, Kennicott Bros. Co., with all the stock in the hands of the Pieser family, E. H. Hunt and the Benthey-Coatsworth Co., each family corporations, will be subject to the tax, but their competitors, such as Vaughan & Sperry and E. C. Amling, will not be bothered, and the Budlong estate will be exempt.

The law, if it finally gets on the books, will require that the chief officer of every corporation file with the collector of internal revenue in the Government building a sworn statement of the gross income and net profits of the concern for the year ending December 31. The penalty for failure to file such an affidavit is that the collector may assess the tax on any sum that seems right to him, and if anyone makes a wrong return, which of course no florist would do, he is liable to fine. The amount of the tax, though it may run to quite a number of hundreds of dollars a year with several of the local trade corporations, is not so objectionable as the principle on which the tax is based.

Various Notes.

There was a report in the wholesale market July 19 that Joe Beaver had dropped dead. Mr. Beaver has been with J. L. Raske, on Jackson boulevard, for some time, and when seen the next day authorized the REVIEW to state that the story was considerably exaggerated. He has a summer cottage on Put-in-Bay, where he intends to spend the month of August.

Mrs. A. M. Schafer has given a five-year lease to Chas. Handel on all her greenhouses at 229 Balmoral avenue. The plant covers 40,000 square feet. The arrangement went into effect June 1, but Mr. Handel was given possession May 17. Mr. Handel at once began planting the entire space to roses, Richmond and Killarney, and had finished the job, with 16,000 plants in place, by July 3. Mrs. Schafer, who has been a successful grower in this location for nine years, is going out of business entirely, on account of her health. In addition to the long lease on her greenhouses, she is selling out her stock of chrysanthemums and field plants of carnations. She will spend next winter with a brother in Texas.

Bassett & Washburn's baseball team defeated the team from Vaughan's Greenhouses, Western Springs, by a score of 26 to 19 at Hinsdale July 18. It was the fifth contest the two teams have had, each having previously won two, so that this game decided the championship. Ned Washburn is manager of the Bassett & Washburn team and says they are open for games with any aggregation of greenhouse employees. C. L. Washburn is chief rooter and it is said the latest success was largely due to his enthusiasm.

The latest list of members of the Association of Commerce shows quite an addition in the number of florists who belong. New names on the list are those of O. J. Friedman, J. E. Hauswirth, John Mangel, Peter Reinberg and C. A. Samuelson. In the supply line, the name of L. Baumann & Co. is a new one.

R. Hansen, of Elmhurst, has retired from business and removed to Kansas to make his home. His establishment has been sold to E. H. Rabe, whose sons will conduct and enlarge it.

Frank Ayers, brother-in-law of C. W. McKellar and right-hand man in that gentleman's wholesale house, has gone to Canada, up north of Montreal, with a party of friends on a fishing and hunting expedition. G. H. Pieser, president of the Kennicott Bros. Co., also started July 19 for Montreal, by boat.

Louis Dreher, of Deerfield, has sold his place to Witthoeffet Bros. Violets and sweet peas were his specialty.

J. B. Deamud is on his farm at Caro, Mich.

Wietor Bros. have begun to cut White Killarney in some little quantity, but say they are not as white as they would like them.

The establishment of Hoerber Bros., at Des Plaines, will be completed within another week; the last of the ten houses is now being erected. The roses have been planted some little time, and carnations will go on the benches of the last three houses early in August. Two large boilers are being set and a big brick stack is going up.

Quite a few members of the trade attended the funeral of John Thorpe July 17. The pallbearers were F. F. Benthey, J. C. Vaughan, W. N. Rudd, Ed Kanst, George Woodward and Joe Curran.

W. J. Smyth is not recovering from his recent accident as rapidly as had been hoped. He will not be able to leave the hospital for some days, and it is feared it will be some time before he can use the injured leg.

Probably few in the market know that

Two weeks ago we printed in this space an offer to send a free sample to any who applied before July 15. We received so many favorable comments on our stock from those who wrote for the sample that we now repeat the offer, good till August 1.

The Latch String is on the Outside

The Society of American Florists and Ornamental Horticulturists will convene in Cincinnati, Agust 17 to 20 inclusive. We take this opportunity of extending an invitation to all who are in Cincinnati at that time to call at the house of Armleder, where we will be very glad to welcome you.

We shall have on display over three hundred finished wagons that you will be glad to look over and you will not be importuned to buy. We simply want you to come and get acquainted and we feel sure that we will be able to make your visit both pleasant and profitable.

Whether you are coming to Cincinnati or not, be sure to send for our catalogue, Form I. It's FREE. You need it.

Just address **ARMLEDER, Cincinnati, O.**

Mention The Review when you write.

George Reinberg is the silent partner in Schildgen & Co., dealers in feed, etc. The same interests are preparing to organize the Lincoln Supply Co., of which Mr. Reinberg will be president, to build a big warehouse on property on North Lincoln street owned by Mr. Reinberg.

Stollery Bros. are rebuilding a house 15x80. In their store they are doing a nice business with some 4-inch pots of gloxinias that are in good shape. They intend to grow more of these next year.

J. Bombenger, on Sixty-fourth street, is taking advantage of the dull season to pull out his old boiler and put in a new one, as well as making other improvements. He had a good spring, but finds things quiet now.

The wholesalers received notice July 19 of another increase of 5 cents per hundred pounds in the price of ice. Hereafter they will pay 27½ cents in quantities of from 500 pounds up, and it takes at least half a ton to fill the average box.

The E. F. Winterson Co. says there is a first-class retail demand for Boston ferns and that it is hard to find good stock of the larger sizes.

George M. Garland, H. S. Garland and a party of friends motored to Freeport, Ill., last week to inspect the new plant being put up by the Freeport Floral Co., with the Garland gutter and truss.

One of the week's visitors was William Murphy, of Cincinnati, superintendent of the trades' display for the S. A. F. convention. He reports a big exhibition assured. There will not be many exhibitors from Chicago, but those who attend will see signs of Chicago all around the hall. Other visitors have included H. E. Philpott, Winnipeg; Ed Roehrs, Rutherford, N. J.; W. A. Rieman, Vincennes, Ind.; C. C. Arnold, Manchester, Ind.; Theo. Meyer, Waukegan, Ill.

Bowling.

The bowlers called in three outsiders July 16. The All-florists made four pins the most in three games, but were second best two out of three. John Zech was the star. Following are the scores:

Player.	1st	2d	3d	T'ls.

RICHMOND, IND.

F. H. Lemon, for fourteen years with the E. G. Hill Co. and a member of the corporation since its formation, has withdrawn therefrom and gone into the retail business at the east side place, where he will have ten acres of ground, a nice dwelling and ten greenhouses. The property is on the city street car line and admirably located. Mr. Lemon will also open a city store at once. He will carry on business as Fred H. Lemon & Co. Richmond is one of the finest and most up-to-date cities in the middle west. Its people have wealth and culture and will be able to appreciate Mr. Lemon's efforts to give it the best in floral decorations, handsome plants and high-grade cut flowers.

The E. G. Hill Co. has thus handed over to Fred H. Lemon, Mr. Hill's son-in-law, the retail division of its business, and ten houses at the east side place. Much of the glass at the east side has been moved to the west side place, where the corporation has now eleven large houses, each 500 feet long and admirably arranged for a wholesale place. Five houses belonging to the corporation will remain on F. H. Lemon's ground until next spring, as, owing to the requirements of the planted stock, more moving could not be undertaken the present year.

The corporation is composed of E. G. Hill, president; Jos. H. Hill, vice-president; S. A. Hill, secretary, and E. H. Mann, treasurer. Their ground is a 50-

acre tract, bounded by the Pennsylvania railroad on the north, from which they have a switch, and on the east by the city street car line, which terminates in front of their place, while across the railroad tracks lies Easthaven, the Eastern Indiana Hospital for the Insane. Visitors to the E. G. Hill establishment can go direct to the door on the Easthaven car, and will find an up-to-date commercial place, with the latest and most practical ideas in heating and bench construction. Trade interest will still center in the testing of "E. G.'s" seedling roses, and "Joseph's" new carnations.

LEXINGTON, KY.

The Market.

Business is extremely quiet and has been since the beginning of this month. We are having some warm weather now and plenty of rain. All the growers are busy cleaning their houses and planting roses and carnations.

Sweet peas are about over for this season. The ones that are coming in are of poor quality. Tuberoses are becoming more plentiful and of better quality. Asters have made their appearance with some of the growers, and in two or three weeks they will be plentiful. Gladiolus spikes are still plentiful and good, and are about the best sellers in cut flowers at present. Other outdoor flowers are also in good supply. Asparagus, fern leaves, smilax and other green goods are in good supply.

Carnation plants in the fields are doing well, considering the rainy weather we have had. There has been but little stem-rot so far.

Various Notes.

The boys at the J. A. Keller estate are busy planting roses and other stock. One house has been finished and the stock is in excellent condition. They will no doubt cut some of the best flowers in this neighborhood. Carnations in the field are looking well at this place and some 20,000 will be planted this season. Several thousand chrysanthemums have also been benched.

William Bell, it is said, will dispose of his greenhouses on West Main street.

Joseph Le Clere, of Olympian Springs, Olympia, Ky., was a recent visitor in this city.

O. C. Heberling, of the Georgetown Floral Co., Georgetown, Ky., was also a caller. BLUE GRASS.

NEW YORK.

The Market.

This week opened with a temperature under 70 degrees, after helpful rains in and around New York, relieving the long drought and bringing salvation to the gardeners and renewed life to the parks and gardens, that were gray and sear and close to complete destruction. It was a narrow escape for the market gardeners and the effect of the drought also was felt in the cut flower market, for shipments are limited and not up to the proper standard in quality. The gladioli had to have rain or give up. Now the usual flood may be depended on.

Supplies of everything are limited and even an ordinary demand cleans up the shipments. Where stock is perfect, better prices are now obtainable. Good Beauties sold occasionally last week at 25 cents. Other roses are still small, short-stemmed and have not begun their advance. It will be several weeks before stagnation ends. There is nothing doing to lift the general market. Most of the carnations go to sleep on arrival. The good stock sells well and at better prices than have prevailed.

Sweet pea prices are back again to bottom figures and the supply grows daily. Orchids are superb and abundant and prices far from satisfactory. Asters were badly handicapped by the heat and quality so far is poor. No good stock is yet arriving. The Rochester offerings, however, are looked for daily.

Time to Get Together.

The boycott is still abroad in the land and the opportunity for fraternity, good feeling and mutual benefit seems to have gone a-glimmering. Between wholesaler and retailer there should be no misunderstanding. Each has his legitimate place in the florists' business and the rights of each should be mutually respected. But peremptory demands are poor weapons for the accomplishment of good results. If there has been some distributing of flowers in the past by a few of the wholesalers, it was ended months ago. During the months that have since

POEHLMANN'S FANCY VALLEY
EXTRA FINE HARRISII LILIES
} We make these a Specialty. Can supply them all the year. Once tried you will have no other.

Mention The Review when you write.

elapsed it would take a Philadelphia lawyer to discover any serious breach of the business courtesy that has actuated the wholesale florists at all times. It is surely conceded even by those who proscribe individual firms that the right to show courtesy to friends is not competition with the legitimate retail business. The effects of present conditions will appear disadvantageously to many when autumn arrives.

Special Train to Cincinnati.

Frank H. Traendly, F. R. Pierson and John Young, the transportation committee of the Florists' Club, announce a special train for the conventionists, which will be a second section of the Second Empire, leaving the Grand Central station at 12:40 p. m., Monday, August 16, stopping at Albany, Utica, Syracuse, Rochester and Buffalo, so that by the time the train leaves the scene of last year's splendid convention it will be well loaded. The fare is $15.15 from New York and berths $4. The club's house committee will keep open house with a well stocked larder. If you want a lower berth, write Secretary Young at once. Saturday there were only enough left to go around and if you do not want to climb, you would be wise to let him hear from you without delay.

A Visit to Scarboro.

A veritable crystal palace is the plant of the F. R. Pierson Co. at Scarboro, divided into six sections, each about 54x300 in size, the latest 375 feet long, and each one requiring an acre of ground and totaling over 100,000 square feet of glass. Two of these immense houses have been built this season. In the latest a great force of men are busy at one end completing the cement construction, while at the other sections the soil is being wheeled into the solid benches, and following this White Killarney is being planted, 25,000 of them in this house alone. The whole great plant is to be devoted to Killarney and Winsor, except for a small section set aside for the testing of new varieties of roses and carnations. Practically four large houses will contain white and pink Killarney and two will be devoted to Winsor carnations, the money-making power of these having been demonstrated last season, with a record of double value over any other varieties.

There is room for two more of these big houses on the land nearest Scarboro, and many more in the other direction, so there is no limit to growth if it should seem desirable. Lord & Burnham Co. has completed the construction work of the buildings perfectly. The heating system is yet to be installed, under F. R. Pierson's own direction. The scheme of solid benches has so appealed to him that the whole area will have this system of planting, cement partitions, walks, sides, etc. Practically the whole structure is fireproof; even the sills are cement, and every detail has been carried out with the idea of permanency, or, as Mr. Pierson puts it, "to last a hundred years." The whole property here has advanced enormously in value since 1907, a purchase of twenty-five additional acres at that time having increased to five times its original valuation and purchase price. The glass area alone here shows an expenditure of over $100,000.

Mr. Pierson cannot say too much in favor of White Killarney, as practically evidenced by its enormous planting. He says white roses every day in the year may be depended on, and in any quantity. This devotion to specialties sounds a valuable hint to growers everywhere, the unlimited field for the best of anything being here forcibly emphasized. The New York Cut Flower Co. handles the output of this range, and the Beauty range adjoining, as well as the stock of the Paul Pierson range at Ossining, over 150,000 square feet.

The Pierson Co. will make an exhibit at the Cincinnati convention, as usual, and some new ferns will add interest to the display.

In addition to his attention to the innumerable details of building, planting, and his wholesale bulb department, Mr. Pierson finds time for official work in local church and literary societies that involves much time and thought. "How do you manage all this and retain your untiring energy?" was a question asked him. His reply was, "Practically I am a vegetarian, and I never fail to get eight hours of refreshing sleep every night." From this we know the secret of his success—ability to concentrate and to put aside care and worry in recuperative sleep—a sound mind in a sound body, and it is easy to understand the wonderful results that have crowned Mr. Pierson's enterprises during the last ten busy years.

Various Notes.

The third annual outing of the Growers' Cut Flower Exchange will take place at Wetzel's Grove, College Point, Saturday, July 31. Messrs. Golsner, Dorval and Hahn are the committee. There will be a large attendance of Long Island growers, as usual, and many from Jersey also.

At Wetzel's, Thursday, July 29, the Greek florists' outing occurs, and this, as already announced, will have a record crowd going by steamer Isabel from the East Thirty-first street dock.

There is a scheme in window decoration at R. G. Wilson's handsome store in Brooklyn worthy of any artistic florist's consideration. With rock and moss, goldfish, ducklings, waterfalls and miniature mountains a charming effect has been produced.

William F. Harding, the paper box manufacturer, was killed Sunday, July 18, by the overturning of his auto at Haledon, near Paterson, N. J. His wife and four children were all badly injured.

July 19 the new Hudson tunnel was opened with great noise and ceremony, large quantities of flowers decorating the terminals and the banquet in the evening. Jersey City has gone demented with joy in the completion of this great work, which brings it within three minutes of New York. The Manhattan end of the tunnel is close to Peter Henderson & Co., Burnett Bros., Stumpp & Walter Co., Ralph M. Ward & Co., Hagemann & Co., William Elliott & Sons, Yokohama Nursery Co., Hinode Co., H. Frank Darrow, Thorburn & Co., Berger & Co., and in fact all of the downtown seed and bulb houses, adding to their conveniences and facilities incalculably.

five years' lease on a store at the corner of Fulton street and Red Hook lane, near the City hall, which he will open September 1.

Harry Bunyard is back from a two weeks' vacation. J. AUSTIN SHAW.

While F. L. Atkins, of Bobbink & Atkins, was driving his automobile in Hackensack, July 11, it collided with another machine which rounded a corner into the street up which the florist was proceeding. Mr. Atkins escaped injury, beyond a bad shaking up, but Mrs. Atkins was severely bruised, and a guest, Mrs. Herrick, suffered a broken collarbone. Both machines were badly damaged.

A building permit has been issued to David Clarke's Sons to add a greenhouse 30x92 at their place in the Bronx.

John A. Payne, horticultural builder at Jersey City, called a meeting of his creditors July 19, at the office of his attorney. He has offered to turn his property over to his creditors or to a trustee in bankruptcy if the creditors should bring an involuntary petition in bankruptcy against him.

GLEN COVE, N. Y.

The Nassau County Horticultural Society held its regular monthly meeting in Pembroke hall, Glen Cove, Wednesday, July 14. There was a good attendance. President Everett occupied the chair. The secretary read communications from several ladies, gentlemen and seed houses, donating special prizes toward the fall show.

The prizes and their donors were as follows: Mrs. Smithers offered a cup for the best collection of early flowering chrysanthemums, the cup to be won three times before becoming the property of a competitor; Mrs. Bucknall offered $5 for a vase of Winsor carnations; Mrs. Barnes, Oyster Bay, $10; Stearns & Walters, $10; P. Henderson & Co., $10; Rickards Bros., $10; Burnett Bros., $10; H. Weeks, Seacliff, $5; G. Burnett further offered $5 for a vase of single violets grown by commercial florists, and A. Jaenecke offered $5 for a vase of Gerbera Jamesoni gigantea.

The judges for the monthly exhibition were Messrs. Johnston, Duthie and Garrett. The awards in the points competition were as follows: V. Cleres, vase of poppies, 85; P. Reul, sweet peas, 82; H. Gant, antirrhinums, 78¼; G. Wilson, fuchsia, 75.

G. Wilson, P. Reul and G. Ashworth were each awarded a cultural certificate for sweet peas. J. Drombrosky was awarded an honorable mention for a vase of platycodon and Stokesia cyanea. H. J. Trepass and V. Cleres received a like award for cucumbers and sweet peas respectively.

This society and the one in Tarrytown are to combine in their annual summer outing to Rye beach.

A successful summer show was held in Glen Cove, June 23. J. F. Johnston took most of the prizes for roses and A. Mackenzie the principal sweet pea classes.

WM. H. MACKENZIE, Cor. Sec'y.

MOLINE, ILL.

The Tri-City Florists' Club held its annual picnic July 15 at Walnut Grove, near Watertown, just across from Campbell's Island. About sixty persons, members of the society and their families, attended and enjoyed an ideal day, dinner and supper being served by a caterer from Watertown. The day was spent with various sports, one of the principal and most enlivening features being a baseball game between picked nines from opposite sides of the river, Moliners predominating in the Illinois team. The score stood 16 to 7 in favor of Moline. This is the first picnic of the club to be held in this locality, all former functions of the sort having been either at the Watch Tower or in some Davenport park. All guests expressed themselves as thoroughly satisfied with the entertainment and voiced their appreciation of the arrangements, which had been in charge of Arvid Anderson, florist at Overlook.

CARTHAGE, MO.—The branch seed store operated in Webb City by the Tucker Seed Co., of Carthage, has been discontinued for the time being. The store will be reopened early this fall.

LENOX, MASS.—It is said that John A. Donahue, who is manager of the estate of Mrs. Morris K. Jesup, has every reason to be proud of his crop of muskmelons, many of which weigh from six to eight pounds.

PHILADELPHIA.

The Rising Eastern Market.

The cut flower market has reached the lowest level, both as to supply and demand. Opinions differ as to whether business is or is not normal. This seems to be affected by whether the speaker is considering the shipping demand or only the local trade. Shipable stock rarely goes begging, but the quantity of shipable stock is small. Easter lilies continue the most plentiful flower in the market, but unfortunately the market fails to appreciate its opportunity; these really splendid flowers are being in oversupply.

American Beauty roses are also a bit overdone, especially in the poorer grades. Kaiserin is scarce, most of the growers being off-crop, and the supply unequal to the demand. My Maryland has been coming in strongly and sells fairly well.

Carnations are scarce indeed. Asters are only partially filling the gap. The supply of choice flowers is small, that of poorer quality far larger. There is plenty of good valley and some nice cattleyas are seen. Sweet peas have revived, thanks to the delightful weather, and promise to be with us a week or so more. The stems on most of them are a trifle short. There is an excellent demand for the other outdoor flowers, candytuft and feverfew leading. The total sales in this class of stock do not materially swell the volume of business. Greens are not in demand.

The Sign of the Rose.

It is a recognized fact that it takes an artist, if not a diplomatist, to sell flowers. The day when flowers sold themselves is past. Everyone who earns his or her bread and butter in this way will agree that this is true. It is a dullard indeed who cannot see where a mistake has been made; a little lack of tact, the wrong word at the wrong moment and a sale has been missed. An instance of ready wit occurred the other day when a flower buyer, possibly a shade below the average, entered the Sign of the Rose and asked William C. Harry, the right hand man of Charles Henry Fox, for violets. A less tactful person would have laughed gleefully and said: "Sir, or madam (I do not know which), violets have been burned up three months ago"; but Mr. Harry simply said politely: "We have no violets, but we have beautiful violet sweet peas," displaying them quickly while the customer was forgetting his or her mortification at the mistake made. In the course of conversation Mr. Harry artfully changed the words violet sweet peas to lavender sweet peas with a delicacy that none can fail to appreciate.

Various Notes.

W. P. Craig has been devoting his attention to an increasing bulb business.

Gilbert Woltemate has leased the greenhouses of George Waterfield, at Wynmoor, Pa. Mr. Woltemate is the son of Henry C. Woltemate.

G. S. Kohler, well known as a grower at Tioga, who removed his greenhouses to Ivy Hill cemetery, has something like 10,000 feet of glass there.

Dale & Yost are doing a nice flower business at Northwood cemetery, near Jenkintown, Pa.

Albert O. Stein, of Stein & Levin, San Francisco, Cal., was in the city this week. Mr. Stein, who represents one of the leading retailers in the west, visited the prominent wholesale and supply houses.

Vacations are the order of the day, but it really seems as though the head of the house did not get his share.

David Rust, secretary of the Pennsylvania Horticultural Society, believes that nothing definite can be done toward consummating the sale of Horticultural hall before September. Mr. Rust thinks the stories in the local dailies have little foundation in fact.

Berger Bros. are receiving some of the finest sweet peas coming into town this week. John Crawford says so, and he ought to know.

Mr. Becker and associates, of the Avondale Floral Co., Cincinnati, paid us a visit a few days ago.

The Henry F. Michell Co. has acquired

H. BAYERSDORFER & CO., 1129 Arch Street, Philadelphia, Pa.

Mention The Review when you write.

season; Kaiserins and Killarneys are fine and plentiful, with carnations still holding on in fair condition. Asters are here, but not in any quantity, and just enough Beauties and lilies. The wholesale houses are having the most comfortable summer one could wish, always being able to fill all orders and nothing much going to waste.

The retailers are having plenty of time to plan for next season; none of them, however, are making any changes in their stores, but they never do until they commence to get busy in the fall.

Various Notes.

The Florists' Club picnic was one of the most successful the club has ever held, the weather was just right and the arrangements all that could be desired. All who attended had a good time.

Randolph & McClements sent their automobile, with about twenty of their employees, men and girls, and they came provided with enough food to last a week.

There was a ball game between the wholesalers and retailers, the score 17 to 3 in favor of the retailers. Randolph & McClements furnished the battery for the retailers.

W. Q. Potter has returned to his post after his vacation, which was not a pleasant one, as he developed a case of blood poisoning while away, which nearly cost him his life and may yet cause the loss of one finger.

The Pittsburg Cut Flower Co. is receiving some fine Kaiserin and Killarney roses.

Wm. Cromack, of Irwin, sails for England this week to visit his old home.

Visitors in town this week were L. F. Darnell, of the J. M. Gasser Co., Cleveland, O., and Arthur Langhans, of Wheeling, W. Va. Hoo-Hoo.

TOLEDO, OHIO.

A heavy hail storm visited us last Thursday, July 15. The loss was light except in Manhattan, where it smashed Chas. Counter's place badly and damaged Ernest Glauser's houses, and stuff outside, to the extent of about $1,000. Fruit and garden crops suffered heavily in that district. In East Toledo G. N. Keller, on the Bay Shore, lost about 100 lights of glass, and E. A. Kuhnke, in southeast Toledo, lost about the same amount. The latter is insured and does not mind the loss very much.

Business keeps moving with the help of a few weddings and now and then a bunch of funeral work. E. A. K.

For Summer our chiffons are good. We make and sell the best taffeta and satin taffeta ribbons on the market. The Monarch is an excellent quality for **Funeral Work.** Sample swatches free.

DETROIT.

The Market.

Stock has shortened up considerably since last report, due somewhat to an increase in sales.

Carnations are becoming poor and with the advent of asters, which have so far failed to appear, will be cast aside for this season.

There are still a few cold storage peonies to be had. Sweet peas are still fairly plentiful and of fairly good quality. Lancifolium lilies are plentiful.

Florists' Club.

The attendance at the last meeting of the Detroit Florists' Club was unusually large. Three new members, John Davison, John Chalmers and Michael Sullivan were unanimously elected.

Charles H. Plumb, chairman of the entertainment committee, asked the club to vote a sum of money sufficient to cover the expenses of an outing, to be had at Bois Blanc island, August 9.

Michael Bloy, speaking on the topic, "First Year With the Wolverines," gave a description of the remarkable growth of the city. Mr. Bloy thinks there is room for more retailers who will take advantage of attractive window displays and advertising. He believes growers would be better off if they consigned all their stuff to commission houses. Mr. Bloy, who has traveled extensively, expressed himself as proud of being a member of the Detroit Florists' Club and said it was the most progressive club of its kind in the country. He also complimented President W. B. Brown on his efficient management of club affairs and had a good word for the trade papers, in which he is a firm believer.

The question of occasional cheap sales came up for discussion. Opinions differed as to the advisability of such sales; those in favor of them, however, seemed to be in the minority. J. F. Sullivan thought sales a good plan for relieving the market of a surplus and other growers agreed with him. The retailers in general were against sales, arguing they cheapen the business and bring down prices. J. K. Stock was in favor of sales for relieving a glut in cut flowers, but not in plants, especially during the season of demand.

Leopold Mallast, of Mount Clemens, was a visitor at the meeting.

Various Notes.

A force of carpenters is busy in the rear of Taepke's store building a pretty conservatory. Entrance to the conservatory will be through an archway from the store.

Mrs. Pochelon is in the country. Upon her return to the city the family will move into its beautiful new home on East Grand boulevard. The rooms formerly occupied, directly adjoining the store, are now being transformed by Mr. Pochelon into show rooms.

James Taylor opened a retail store in Mount Clemens Saturday, July 17. Mr. Taylor's store is in the heart of the city, and with good management, his venture should prove a success, as there appears to be a good opening for a retail place. H. S.

Baker City, Ore.—Ira B. Sturgis has purchased the greenhouses and stock of R. C. Eisele and will continue the business.

You know what **hot weather** does to stock. Well, Milwaukee is well favored, as we have no very hot weather here, and in consequence stock of all kinds is still in good shape. Big cut of fancy Carnations, Roses and Giganteums. Try a few shipments and be convinced.

NEW ORLEANS.

The Market.

We are now in the middle of a hot, dull season, when the florist who is not rung up once in a while for a funeral design has ample time to water his plants and attend to his chrysanthemums, which are for the present the only important flowers needing care. Field roses are bad and asters have been a complete failure this year.

Various Notes.

F. Faessel says he has been quite busy lately.

J. Shackai, the chrysanthemum grower, has bought a square of ground, of the newly drained land around New Orleans, and is going to move there from the place he has been occupying on Bayou St. John.

The New Orleans Horticultural Society had its annual election meeting at Milneburg. The new officers are: President, A. Alost; vice-president, H. Doescher; secretary, C. R. Panter; treasurer, John Eblen.

The newly elected president, A. Alost, came from Belgium a few years ago. He learned his trade in the large nurseries of his native country. Engaging for some time in farming, in the parish of Calcassica, he moved to New Orleans, where he secured a large tract of ground in Gentilly, one of the suburbs. He has been there ever since, establishing a nursery of general stock, growing most largely roses and mums for the trade. He has been quite devoted to the interests of the society and well deserves his new position.

Herman Doescher is a young man of ambition to succeed and anxious for the welfare of the society, and no doubt he is in the right place. About Treasurer John Eblen and Secretary C. R. Panter so much has already been said at previous elections, the writer will only state that every member of the society is well satisfied to see them once more at their posts. M. M. L.

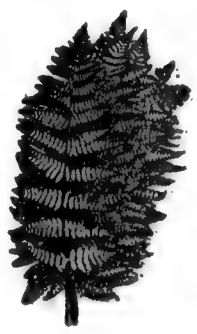
NORTH INDIANA FLORISTS.

The Northern Indiana Florists' Association will meet at Winona Lake, Ind., Tuesday, July 27. Those arriving in the forenoon will buy tickets to Winona Lake but get off at Warsaw, and will visit the greenhouses north of the city, returning to Warsaw for luncheon, after which they will go to the park, where the meeting will be held. They will visit the park greenhouses and other places of interest.

Every member, and all other florists or northern Indiana who wish to become members and coöperate with the association, are requested to be present.

WM. E. HAND, Sec'y.

AMERICAN PEONY SOCIETY.



(Continued from page 7.)

with the college authorities on this subject. This committee met in Mr. Ward's office in New York and discussed the subject, with the result that Mr. Brown, of the Cottage Gardens Co., acting for Mr. Ward, and myself were to send a letter to Prof. Craig after his return, conveying the suggestions we had to offer. This letter, however, was never sent, as in the meantime, through correspondence with Mr. Batchelor, we learned that practically everything it was our intention to suggest was already being carried out under the direction of Mr. Batchelor, the college authorities having given him full charge and power to do everything which in his judgment was required for the good of the peonies. Provision had been made for drainage, and over eighty loads of manure hauled on the plot. Any further action on our part was deemed unnecessary.

Splendid Showing This Year.

This year the peonies made a splendid showing. They are strong and healthy and, with but few exceptions, are full of typical blooms, which gave us a splendid opportunity to study them and make comparison. What is most surprising, the strongest plants and finest blooms are in the portion of the plot that came in for the greatest amount of criticism; that is, the lowest point in the field. Here some of the choicest varieties are found, many of them from the collections

received from Europe. Avalanche, Albatre and Mlle. Rousseau stood nearly shoulder high, with immense blooms which were a revelation to me. Great clumps of full double Martin Cahuzac, varieties which in our nurseries are never allowed to stand long enough to show us what they really are; the Lady Alexandra Duff, sent by Thurlow, with its immense white blooms, was particularly noticeable; all growing in the ground condemned the year before as being absolutely unfit to grow peonies in.

Another point of which I took particular notice was the fact that the colors of most of the varieties were especially strong and distinct, all of which goes to show that while it takes peonies longer to establish themselves in the heavy clay, the strong soil produces excellent results when they are finally under way. My only regret was that the other members of the society could not have seen them this year, instead of last.

I wrote to Joseph Dauphin, of the committee, asking him if he had any suggestions regarding this report. I can not resist quoting the following from his letter of reply, dated July 16:

"I have no suggestions to make, as I think whatever you say on the subject will be the same that I would say. For the general appearance of the plants, either as a whole or individually, I had no kick coming. The plants were strong and healthy, and flowers in as good shape and size as could be. Very few weeds, and the ground had been well cultivated. I am pretty well satisfied with the looks of the plot this year. I know the difference between that clay soil and our sandy loam at Long Island. They may on their lot sometimes be unable to cultivate or weed out, just on account of the weather. Not taking account of the mixture of varieties which was done by everybody, I say the lot is O. K., and, moreover, I believe Mr. Batchelor is doing his very best in the case, and I am sure will keep up.

"As regards drainage, what do they want to drain, pocketbook or lot? Neither needs it, I think. There is, it is true, a low corner in the plot, where Goos & Koenemann's plants are, but they seem to enjoy the spot. I wish you would in your report emphasize the pains Mr. Batchelor is taking in this work. My way of looking at the whole situation is not of censuring any one, but just the other thing—congratulations for the work done."

When we arrived we found Mr. Batchelor among the peonies with two competent assistants, who were assisting him in tabulating descriptions of the varieties in bloom. A tent had been erected, and everything necessary for carrying on the work was right on the ground.

Mixed Nomenclature.

There are 1,933 numbers in the original plot, and to go over each of these one by one seemed like a hopeless task. The mix-up of varieties and names is appalling. I don't believe the members of the society begin to realize how bad it is; I am sure I did not. But there they were, side by side, all in bloom. And by the evidence, we were all guilty. It is impossible to go into details, but here are a few illustrations:

Edulis Superba appears under twenty-four different names, and I don't know how many got away. Nearly all the l'Esperance sent by American growers is Edulis Superba. The European growers sent the correct one. A fleshy white, minutely powdered with lilac, Duchesse de Nemours (Guerin) in every case proved to be Edulis Superba. Modeste Guerin and Rosea Superba proved to be the same, while Gen. Bertrand in many cases appeared under the name of Modeste Guerin.

Probably Queen Victoria or Whitleyi could lay claim to the greatest variety of names, unless perhaps among the reds with stamens, where the greatest confusion exists, Delachei, Fulgida, Louis Van Houtte and others being badly mixed. Lady Bramwell, long catalogued as a Kelway introduction, proves to be in every case identical with the old French variety, Dr. Bretonneau (Verdier), and so on.

The check list, with its 2,700 names, staggers one. But at the above rate, I believe it can be reduced to one-fifth that number by the process of elimination.

Naturally this thought will arise in the minds of many: How can the committee be sure they are able to say which is the correct variety, among such confusion? At first it seemed impossible. But on getting down to work, strange to say, the very confusion in many cases

brought about the natural solution of the problem. The positive identification of a variety in one place solved the question in a host of others, and as we advanced through the plot the work became clearer and clearer, from the simple fact of having all the evidence gathered together before our eyes.

Mr. Ward's Fine Stroke.

It was a master-stroke on the part of Mr. Ward when he induced the most reliable European growers to send their collections over here. We have Dessert's complete collection, in addition to that of Croux, and Paillet, of France, Goos & Koenemann, Germany, Barr & Sons, of London, and DeGraaff Bros., of Holland, this last collection being obtained through the efforts of Prof. Craig. These collections have proved to be a wonderful help in this work, without which I am convinced it would have been impossible for us to make much headway.

The work naturally resolved itself into three parts: First, varieties which can be identified without much difficulty and which we were able to pass upon as being correct without much doubt; second, those varieties which for various reasons will require more study, or regarding which we had no data to work upon; third, varieties with names of uncertain origin, that probably it will never be possible to identify, and which are of such doubtful value as not to be worth the time and effort necessary to establish their identity, even if it were possible.

Of the first group, Mr. Batchelor writes that he thinks the list will number 275 varieties, descriptions of which will be published by the college during the coming winter. It is the intention to start a new plot wherein three plants of each of these 275 varieties will be planted to serve as a basis of comparison for future work, and to show the members of the society the true variety so far as

the committee is able to judge, subject to the correction of any errors which may be discovered before the official catalogue is finished and permanently published.

The third class will be eliminated from further consideration, except as identification follows in the natural progress of the work, leaving only the varieties in the second class upon which the work of the committee will be concentrated next year.

Debt to Cornell.

Prof. Craig says that the university has taken hold of this work, backed by the state of New York, and they will carry it to its final conclusion, even if the Peony Society should go out of existence. They have already spent over $700 on the bulletins printed for the society. Several acres are occupied by the peonies, the use of the land and its care being no small item.

Mr. Fewkes, secretary of the society, in a letter just received, writes as follows: "I think the society does not realize what is being done for it by Prof. Craig and his assistants, and what little experience I have had in such matters leads me to believe that the nomenclature business would soon be in the same condition in which the peony committee of the S. A. F. find their efforts, had it not been for Prof. Craig. I am glad the society conferred honorary membership on Mr. Batchelor. And when they come to realize the amount of work he is doing, I think they will be glad to honor him in any way that seems fit."

Prof. Whetzel gave me an interesting account of his experiments with club roots or nematodes, as some call them. He has a choice collection of these growing in his garden, for experimental purposes, and seems in a fair way to solve this problem.

In conclusion, I wish to say that it seems to me every florist who grows peonies commercially, and every amateur whose special hobby is peonies, will find it to his advantage to assist us, not only by joining the society, but by giving us the benefit of observations. It is surprising how much the growers have learned individually during the last few years, many of the errors which stand forth so conspicuously in the Cornell plot having long since been corrected in the catalogues of the donors; but there is still plenty of work ahead.

Bertrand H. Farr.

Lebanon, Ore. — George L. Allen is growing a big patch of Shasta daisies and having fine success.

FOR SALE—Greenhouse, 3000 ft. of glass; fine up to-date residence, barn and ½ acre ground; greenhouses built 3 years; located in thriving place in Michigan; price, $3500, including stock and fixtures; cash down, $500; balance on easy terms; could sell three times what we grow; reason for selling, very poor health. Address No. **83**, care Florists' Review, Chicago.

FOR SALE—For $20,000 00, on easy terms, August Luther's place at Kansas City, Mo.; the best opportunity in the United States; land worth the price that I ask for the 12 greenhouses, boilers and a complete outfit to do business; 4 covered wagons, 8-room dwelling and lots of outbuildings; can be bought without the ground if desired; ill health compels me to sell. August Luther, 30th and Denver Ave., Kansas City, Mo.

FOR SALE—On account of other business, a florist's store and 2 greenhouses, 100x20, located in good neighborhood with good retail trade; long, favorable lease; no repairs; greenhouses planted in Boston ferns will bring price of place by first of November; also primroses, palms and other stock; reason for selling and full particulars will be given to parties interested. Address P. P., 920 N. Campbell Ave., Chicago.

FOR SALE—Market gardener's and florist's business; 7 greenhouses, well stocked, 11,000 ft. glass; 9 room house, office, work room, barns; good condition; steam heat, electric light throughout; 7 acres rich land; city water; 5 minutes from depot; market for all vegetables, flowers and plants you can produce; reasonable price, easy terms; located in New York State; good reason for selling. Address No. **71**, care Florists' Review, Chicago.

FOR SALE—An up-to-date, 18 years established florist's business, located in a city of 250,000, 2½ miles from court house, 1 block from car line, adjoining a large cemetery; city water; steam heat; well stocked; the place has been rebuilt only 4 years ago, and a 4-room house, office, 2 greenhouses and shed were put up new then, so the place is in splendid condition; a great opportunity for the right party; only $1500 cash required; balance on easy terms; for particulars apply to H. Fuchs, 556 4th Ave., Louisville, Ky.

A GOOD INVESTMENT.

Enclosed please find my check for $1.40 in payment for my half-inch card one month in the department for Leading Retail Florists in the Review. This has been a good investment for me ever since I made the yearly contract, and is getting better right along.

George C. Baker.

San Antonio, Tex.

DENVER.

The Market.

Trade has been fair for the last fortnight, although the regular summer business conditions are with us. The weather has been warm, and this, with a large amount of rain, has told on the quality of stock that came in. Roses are getting somewhat scarce, but carnations appear to be still plentiful and some of them are of good quality, though the bulk of them are poor. Sweet peas are plentiful and the price is going down every day. Outside flowers, with the exception of Shasta daisies, do not cut much of a figure. Take it all in all, however, trade compares favorably with last year.

Various Notes.

Owing to the great interest taken in the S. A. F. convention by members of the society in Denver, President J. A. Valentine and State Vice-president N. A. Benson gave them a dinner at the Tortoni restaurant a few evenings ago, where they had a jolly good time. Several of the members made short talks regarding the business outlook, etc. An endeavor was also made to find out how many were going to Cincinnati. An unusually large number signified their intention of attending. Before closing the affair, a vote of thanks was passed, thanking Messrs. Valentine and Benson for their kindness in giving the spread, which was appreciated as much by President Valentine and Mr. Benson as it was by the members.

ST. PAUL.

Annual Picnic.

The first annual picnic of the Minnesota State Florists' Association was held at Big Island Park, Lake Minnetonka, July 15. Over 300 men, women and children were in attendance, consisting of members of the trade, their families, employees and friends.

The grounds are admirably adapted for picnics, being surrounded by water, and they are high, rolling, shady and clean. They are owned and operated by the Street Railway Co. and are situated about two miles from Excelsior, from which point passengers are conveyed on a large sidewheel steamer, owned by the company.

The day was perfect, the crowd good-natured and agreeable, and all enjoyed the trip, saying they had the best time of their lives.

Racing, tug-of-war, baseball and waltzing were on the program of sports and everyone was an interested spectator or participant. The prizes and winners were as follows:

Race, children under 10, Walter Peterson, Minneapolis, first; Herbert Holm, St. Paul, second; Arthur Ruedlinger, Minneapolis, third; R. Stern, Minneapolis, fourth; Kent Lynes, Minneapolis, fifth.

Race, boys under 15, B. Busch, Minneapolis, first; Carl Busch, Minneapolis, second; E. Bergstrom, Minneapolis, third.

Race, girls under 15, Hazel Clarine, Faribault, first; Anna Dill, St. Paul, second; Rose Micowski, St. Paul, third.

Ladies' race, Anna Michaels, St. Paul, first; Bernice Cole, St. Paul, second; Agnes Anderson, Minneapolis, third.

Men's race, Judd White, Minneapolis, first; Harry Slater, Minneapolis, second; Harry Dysinger, St. Paul, third.

Tug of war, prize cigars, won by St. Paul.

Baseball, prize knives, won by St. Paul. Score: Minneapolis, 10; St. Paul, 12.

Waltz—Best lady, Helen Greeley, St. Paul; best gentleman, H. E. Geyer, St. Paul. Prizes, $5 in gold to each one.

The bowling contest is held in St. Paul, July 22.

A. N. Kinsman and wife, of Austin, N. Clarine and daughters, of Faribault, and F. M. Johnson, representing E. H. Hunt, were the out-of-town visitors.

A boat ride around the lake from 4 to 6 was enjoyed by over 200. Dancing in the evening was participated in by nearly all present.

The catcher on the Minneapolis ball team dislocated his thumb by a foul tip in the second inning. The accident was painful, but was soon relieved.

O. J. Olson, the prime mover of all former picnics, was necessarily absent.

The committee, consisting of E. Nagel and C. Ruedlinger, of Minneapolis, and

A. S. Swanson and E. B. Holm, of St. Paul, was tireless in its efforts from start to finish and "pulled off" everything on schedule time.

President Wirth did not arrive until evening, being detained in the city on business.

Charles Vogt missed the picnic on account of illness. His cheery smile was missed by many.

The veteran vegetable grower, Mr. Busch, was an interested spectator of all the sports and his two sons carried away prizes.

Chris Hansen, who was formerly in the business but is now rated in six figures, was there renewing old acquaintances.

Ludwig Anderson rounded up over fifty of May & Co.'s employees.

Holm & Olson's complete force, from store and greenhouses, was present.

Seed Trade News.

AMERICAN SEED TRADE ASSOCIATION.

Pres., J. C. Robinson, Waterloo, Neb.; First Vice-pres., M. H. Duryea, New York; Sec'y and Treas., C. E. Kendel, Cleveland, O.

J. C. Robinson has just returned to Waterloo, Neb., from the eastern trip on which he was elected president of the Seed Trade Association.

C. Willard Smith, well known as a salesman for the Leonard Seed Co., Chicago, was drowned while bathing in Lake Michigan July 18. A portrait and biographical sketch appear in the obituary column on page 12.

C. H. Coy, president of the C. Herbert Coy Seed Co., Valley, Neb., paid a visit to his father, E. L. Coy, at Melrose, Mass., following the Niagara Falls convention. He passed through Chicago, homeward bound, July 16.

The Senate bill specific duties on bulbs, if they become law, will effect a considerable reduction on many items, and it seems quite likely the new tariff bill may become effective right in the midst of the season during which bulbs are arriving.

Reports on condition of trade generally are normal and satisfactory. Traveling men seem to be picking up quite a few orders and the general feeling among the country merchants who handle seeds points to a good business for the coming year.

Reports from the pea and bean growing sections are favorable as a whole. In some sections rain was needed and, not coming in time, has probably shortened many of the earlier varieties of peas. The bean crops are pushing along nicely and conditions at present are favorable.

Harry L. Mixson, of the W. H. Mixson Seed Co., Charleston, S. C., who has the distinction of being the youngest member of the Seed Trade Association and the only one from south of Mason and Dixon's line, present at the Niagara Falls convention, visited the Long Island cabbage seed growers on his way home.

The onion set situation at Chicago indicates that a fairly good crop will be harvested. Some bad reports come from Louisville, where the weather has been overwet, and as it comes just at the time to harvest it is doing considerable harm. The chances are that the crop at Louisville will be much below what it was last year. The set crop at Chicago will likely be equal to last year's, but not any better.

A. H. Goodwin, vice-president of the W. W. Barnard Co., Chicago, was 66 years of age July 15.

Hjalmar Hartmann & Co., Copenhagen, Denmark, say that all root seeds will be scarce this year, as the roots were much damaged during winter.

French bulbs, as well as Dutch, will be late this season. Advices to hand this week indicate it may be August 7 before any considerable quantities of French stock reach New York.

Heller & Co., Montpelier, O., manufacturers of the mice-proof seed cases and seed store fixtures, have opened a branch at 220 Wyandotte street, Kansas City, Mo., where they will carry a complete line.

Kinkerter & Sheppard Co., 4669 Frankford avenue, Philadelphia, who handle a large line of hardware, house furnishing goods and mill supplies, added a seed department one year ago. This has shown considerable growth and they are planning to largely increase the seed business next season.

Crumbaugh & Kuehn, Toledo, whose incorporation was reported in this column July 15, plan to enlarge their business. The officers are: President, E. W. V. Kuehn; vice-president, W. R. Hadnett, formerly a local seed inspector; secretary, E. N. Crumbaugh; treasurer, F. R. Moorman, formerly of the McCabe Grain Co.

The Livingston Seed Co., Columbus, O., reports that tomatoes for seed crop are coming along finely. They do not recall a season in recent years when the first clusters set so freely and formed so splendidly as this year. They have 400 acres of plants growing for seeds and say that a full crop will be especially welcome this year, because of the sold-out

condition of many stocks; they believe the seed trade in general was more closely sold out of tomato this season than in many years past.

Francis Brill, Hempstead, N. Y., says he is getting too old (he has passed the allotted three score years and ten) to handle so many lines, and he will close out pansies and some others this season.

M. Kirkeby, of Kirkeby & Gundestrup, says Knud Gundestrup is now in England, visiting seed growers and mushroom spawn makers, and is expected to reach Chicago about the middle of August. He has inspected the seed crops in Denmark and northern France. Mr. Kirkeby reports that the firm plans to considerably extend its operations, in spawn, market gardeners' seeds and in onion sets.

HARRISII BULBS.

The main shipment of Harrisii bulbs reached New York July 15, as follows:

Consignee.	Cases.
Crossmond, L. D., & Co.	593
Henderson, P., & Co.	65
Maltus & Ware	15
Pierson, F. R., Co.	122
Vaughan's Seed Store	601
To order	878
Total	2,274

SEED COMMERCE IN MAY.

The seed imports for May of 1908 and 1909 were as follows:

May, 1908	$193,117
May, 1909	659,485

In the same period the exports of seeds were as follows:

May, 1908	$139,089
May, 1909	112,648

PEAS AND BEANS.

W. H. Grenell thinks that the pea crop will not be likely to fill contract orders, while the bean crop is almost certain to be short. At Saginaw July 19 Mr. Grenell said:

"Crop conditions of peas and beans in central Michigan are fair. Late sowings of peas are depending on more rain. Early sowings are a fair crop. Considerable seed was not planted, owing to rainy weather in May. Altogether the crop will not be likely to fill contract orders on peas. Beans are extremely late. Some are suffering from want of rain and cultivation. Half of the crop is just in second leaf. I can not see how we can get a crop of any magnitude, and more likely it will be extremely short. The plants look healthy, but are standing still and not making a good growth. From my point of view, there are no signs of any surplus of either peas or beans."

CONNECTICUT SEED CROPS.

Connecticut crops up to this time look exceptionally well, notwithstanding that we are at present in the midst of a severe drought, and of course it is too early to predict anything definite as to the outcome.

Onion is just getting into full bloom, and plants are healthy and vigorous. Beet seed, under quite a reduced acreage, never looked better at this date, but timely rains are necessary to carry out the crop, which is generally harvested about the same time as onion seed, August 15 to 25. Turnip and kale seed is practically all housed now, and the yield of kale under limited acreage was unusually heavy.

Warm July weather up to this time has pushed the sweet corn crops, and the crop is looking vigorous and healthy, but on dry [illegible] is commencing to roll up, and will be seriously affected unless we get ample moisture soon.

Frank C. Woodruff and Mrs. Woodruff left July 17 on the Lapland for Germany, where they will tour the continent and Great Britain for about three months. W. S. Woodruff.

NEBRASKA CROP PROSPECTS.

The J. C. Robinson Seed Co., Waterloo, Neb., is well pleased with the present rate of progress in its territory. July 19 Mr. Robinson said:

"Crop conditions in our immediate vicinity at the present time are showing up very good. We have had one hail storm that passed through a heavy seed

GIANT PANSY SEED
The KENILWORTH Strain
is unsurpassed: the immense flowers of 3½ to 4 inches are of perfect form and substance; every tint and shade is produced in striking combination and endless variation of beautiful colors and markings: it is the result of years of selection; it embraces the largest and best of English, French, German and American novelties; 1909 seed greatly improved by rich shades of brown bronze, red and mahogany. New seed: 1000, 25c; 2000, 40c; 6000, $1; ¼ oz., $1.40; ½-oz., $2.50; oz., $5.

DANISH ROOT SEEDS.

Formerly the root seeds used in Denmark were imported from Scotland and Germany, but by experiment it was soon found that excellent conditions for the production of these seeds were at hand in Denmark. As this Danish raised seed proved to give good results, the industry made solid progress.

The government is supporting this industry by directing a competition among the most efficient growers, and by doing so a constant improvement of quality is not merely obtained, but also a rational control of the stocks. Those growers whose stocks prove to have attained the highest refinement and are yielding the most valuable clear profit are awarded first-class certificates by the government. Every second year a competition at the government's experiment station is thrown open, and to retain the certificate "First-class stock," the grower must work forward on the refinement of his stock, else he may be distanced at the following competition by some other grower, who will then obtain the certificate of first class.

Danish growers assert that in comparative trials of this seed and of German, Scottish and English seeds, the Danish seed of first class shows up in a most satisfactory manner, not only with regard to its typical form and smoothness, but also on account of its high percentage of dry stuff (nutritive substance) and by being free from stock-runners. The government's experiments have proved that a first-class stock of Danish seed gives an extra profit of about 50 kroner per Danish acre.

"We have not as yet received complete reports from outside sections, but those received indicate very fair crops, with possibly the exception of muskmelons. Also, some reports on winter squash varieties and few items of pumpkins are not as promising as we could wish for. Cucumber crops as a rule are doing nicely, but some varieties will probably be in short supply on account of hail damage. Sweet and field corn crops are in promising condition."

section, doing considerable damage, but believe crops will recover somewhat and make a part crop. Also, local hail storms have occurred in some outside points.

Hjalmar Hartmann & Co., Copenhagen, have issued a hanger showing in colors the types of turnips, mangold and rutabaga recently awarded the government's first-class certificate.

IMPORTS.

The imports of seed through the port of New York for the week ending July 10 were as follows:

Kind.	Pkgs.	Val.	Kind.	Pkgs.	Val.
Canary	565	$1,482	Grass	415	$2,513
Caraway	298	2,338	Lycopodium	30	2,240
Cardamom	4	133	Millet	478	860
Clover	85	1,153	Other	..	2,009
Coriander	104	335			

In the same period the imports of bulbs, trees and plants were valued at $2,881.

THE HOLLAND BULB CROP.

Weather conditions in Holland have been such that the harvesing of bulbs is nearly a fortnight behind the usual period. The tulips have now been lifted and there is, generally speaking, an excellent crop, both in quantity and in quality. The demand for most sorts has been and is strong, but there is not so great a volume of orders as was hoped for the high priced varieties, and there is a prospect of some fall in prices on these. The salesmen returning from America brought no increase in volume of orders for forcing varieties, but had an increase on orders for the bedding sorts. The same is true of trade conditions in England.

The hyacinths are now being lifted and everything is indicating a satisfactory harvest. The weather in June was extremely wet and cold, which retarded the ripening of all sorts of bulbs, but the earlier part of the season was favorable, so that it does not seem that any harm has been done by the bad weather of June. Narcissus and crocus will not ripen until the end of the current month, but it looks as though a fairly good crop will be harvested.

The shipment of bulbs on orders will be somewhat later than usual, because of the backwardness of other operations.

THE GURNEY SEED CO.

The Review of July 15 chronicled the fact that the Gurney Seed Co. will build, this fall, a two-story warehouse at Yankton, S. D. The Yankton people are extremely well pleased at this news, as there had been some talk that the concern might locate elsewhere.

The Gurney Seed Co. was organized three years ago the coming September, with C. W. Gurney as president; E. R. Gurney, vice-president, and D. B. Gurney, secretary and treasurer. The business the first year exceeded the incorporators' expectations; the second year the business doubled, and the third year—the present season—the business has been more than twice that of last season. This spring, in connection with its retail trade, the firm began a jobbing business. Besides giving employment to over forty persons during the greater portion of the year, the firm affords an opportunity to many local farmers to increase their income. The office and field forces will be greatly increased as soon as the new building is ready for occupancy. D. R. Gurney is the manager. C. W. Gurney and E. R. Gurney, who are associated in the management, are both business men, the former being proprietor of the Yankton Nursery and the latter a banker of Fremont, Neb.

Rawson's New Pink Beauty Lupine

Should now be sown for an early fall crop in the hothouse. It has proven one of the most profitable crops during the last season and must be considered one of the best novelties of recent years.

Lilium Harrisii

Now Ready for Delivery

Our first consignments have just reached us and we are now filling early orders. **Easter comes very early next year, March 27,** and a good many growers will have difficulty in getting Japan Longiflorum in flower in time, and there will be an extra demand for Harrisii in consequence.

In view of the fact that **crop is short,** we advise those who have not already placed order to lose no time doing so. Last year we were not able to meet the demand for our selected Harrisii on late orders, so we urge customers to order without delay. At present we have a good supply still to offer, and will be able to take care of early orders, but there should be no delay in ordering, as there is sure to be a scarcity of good stock, especially in the large sizes.

We offer a selected stock of the original, true Harrisii for early forcing. These bulbs have been grown from the original pure Harrisii, and will be found splendid stock for early forcing, for which purpose Harrisii is so valuable. We have had the stock inspected and are assured it is almost absolutely pure and almost entirely free from disease. It is not stock picked up indiscriminately from different sources, but is grown from one stock, and will be found very superior to the ordinary Harrisii usually offered, both in regard to freedom from disease and purity, and not the late type now so often furnished.

6/7 inch bulbs, 350 to the case	**$ 6.00 per 100; $ 55.00 per 1000**
7/9 inch bulbs, 200 to the case	**9.00 per 100; 85.00 per 1000**
9/11 inch bulbs, 100 to the case	**20.00 per 100; 180.00 per 1000**

Full case lots at 1000 rates.

Large Specimen Hydrangeas

In tubs and half barrels for July and August Flowering

We make a specialty of these plants, and have a grand lot in the finest possible condition. Our plants have never been so well budded as they are this season. Flowers are just beginning to show color.

Extra fine plants, in tubs, $3.00 each; very large specimens, in half barrels, $5.00 and $7.50 each.

CATALOGUES RECEIVED.

American Blower Co., Detroit, Mich., the "Sirocco" blowers and other ventilating apparatus; Francis Brill, Hempstead, N. Y., cabbage, cauliflower and other vegetable seeds; W. C. Heller & Co., Montpelier, O., mice-proof seed cases; Park Nursery Co., Pasadena, Cal., nursery stock; A. Dessert, Chenonceaux, France, peonies.

CLEMATIS JACKMANI.

I have noticed here a Clematis Jackmani which blooms six weeks earlier than the rest. Please state if this is another kind. Catalogues do not mention anything of this kind. F. J. U.

Clematis Jackmani and others of the large flowering class, which contain considerable blood of the summer blooming C. lanuginosa, flower much earlier than C. paniculata, which is more generally cultivated than any other variety in the United States. Most of the American nursery and seed catalogues will be found to contain a good selection of clematis of the Jackmani section. These latter flower pretty closely together in summer, four to six weeks ahead of the popular Japanese variety, C. paniculata. C. W.

NEW BEDFORD, MASS.

The Market.

Outside of funeral work there is nothing doing. Outdoor flowers are plentiful, everyone having his own flower garden. The few carnations now coming in are of poor quality. They retail at 35 cents per dozen. Roses are so poor not many of the uptown florists are buying them. The retail price is $1 and $1.50 per dozen. Sweet peas are plentiful at 25 and 50 cents per 100 blooms retail. They sell quicker at 5 and 10 cents per bunch. Funeral work uses up lots of surplus stuff.

Everything is drying up for want of rain. Young stock in the fields would brighten up if we only had a little rain.

E. H. Chamberlin is showing some nice ferns.

Vegetable Forcing.

DISEASED LETTUCE.

Can you suggest why our lettuce is a failure? Our houses were built four years ago, on new land that had never had a plow in it before the houses were built. We broke up the land and put on about seven or eight tons of thoroughly rotted mule manure to a house 32x200 feet, with solid beds and a walk in the center. The first crop of lettuce that was grown in the house was in the fall, and this house produced two and one-half tons in the first crop. We also used nitrate of soda on this, with the manure. The second crop, however, without any manure added, was a complete failure. The plants, when about one-third grown, stopped growing and became diseased or stunted, and would grow short, curly leaves in the heart and finally rot off at the ground. The variety was Grand Rapids. This was cleaned out and a third crop put in, and it turned out the same as the second crop.

The soil grows good vegetable plants in the spring and, in fact, seems to grow fairly good crops of other plants, but will not grow lettuce. When the ground gets dry, there is a white sediment of some kind that gathers on the surface and looks like a soda or alkali. Does this do any harm? There is good drainage under the beds, and the soil is a clay loam.

We are making a compost of sod and loam. It is a clay loam, the same as is in the greenhouse, but has a heavy sod on it. We are using six loads of sod and loam to one load of horse manure. Is this enough manure? Would you take out the old soil in the house, or would it be safe to put the fresh soil on top of the old soil? We could not take out all the old soil, on account of the rough surface of the drainage, which consists of broken stone and brickbats. The night temperature is 40 to 45 degrees, the day temperature 60 degrees, with plenty of ventilation. Was the old soil too rich?

R. B.

Your house is all right, and your trouble was not caused by the soil having too much manure in it, as you could use a great deal more manure without injuring the plants. It is evident that you have the most common and troublesome disease affecting hothouse lettuce. It is a fungous disease (mold), which lives on decaying matter in the soil. When the plants are healthy and well grown the fungus does not make much headway on a crop, but when they are weak and soft from too high a temperature, not enough ventilation, too much water, or having the foliage wet at night, or any other mistreatment which may tend to weaken and soften the plants, the fungus grows over the stalks as well as the rotting material in the soil, soon causing decay in the stalk just above the soil, so that it must stop growing and soon die.

None of the many ways of mistreatment on the part of the grower will really cause the rot or wilt disease, but they will weaken the plants so that they are unable to ward off the attacks of the enemy as they naturally would. The disease must start from spores, as mushrooms start from spawn or weeds from weed seed, etc. A perfectly healthy condition of the plants will do much to keep them immune. Conditions that are ideal for plants are usually not so for the enemies, and vice versa.

You had no disease in the first crop, the house being new, but there are probably an unlimited amount of spores in the house now, awaiting favorable conditions to grow and spread.

I would suggest that you pull out all root stumps, scrape off the top soil about an inch or more deep and wheel it out. Also scrape the aisles and clean out every sign of vegetation, dead leaves or filth. If you take out more soil it will be better, but it is not necessary to take out all of it. If you have no other plants in the house or no other houses connected with this one, you should burn sulphur in it when cleaned up, but do not burn sulphur unless the house is separate from others where plants are, as it will injure them. Scatter some air-slaked lime over the beds, put on the fresh soil or compost and work it over well.

Use an abundance of ventilation, to keep the foliage aired out and dry, when lettuce is growing. Water well when you do water, but not too often, or the foliage will be wet too much. Bordeaux mixture, sprinkled over the soil when the plants are quite small, is a good preventive, as it kills all fungi, etc., but cannot be used when the plants are larger, as it discolors the leaves. When a plant is noticed wilting or dying, pull it out carefully and keep the diseased plants carried out of the house. Have some air-slaked lime and sulphur mixed up together, and put a good handful over the soil around where the affected plant was standing, to kill all spores and disease that might spread to near-by plants.

A sandy soil is better for lettuce than a heavy soil, not only because it keeps drier on top, but it really grows better lettuce. My soil is heavy, and I mix in about one load of manure and a half load of sand to four loads of soil, and let it rot a while before using, so that the soil will have less decaying material in it for fungi when I replant. I turn in some well rotted manure and use some nitrate of soda later.

H. G.

ST. LOUIS.

The Market.

Considering the hot weather last week, the retail business was reported good, there being plenty of funeral work, of which all had their share. Outside of this there was little going on. The wholesalers are still short of first-class stock, and especially so in roses and carnations. A few good Kaiserins are coming in, but good Beauties are out of the question in this market at present.

The few good carnations that come in find ready sale, but the bulk of them are poor. Asters are coming better since the rain, and will soon be abundant. Gladioli are selling well, and the market is well supplied with them. We see some extra good lily of the valley. Few of the single flowering tuberose stalks are in yet, but they promise to be abundant soon. There is plenty of smilax and other greens.

Various Notes.

Lyle C. Waterbury, manager of the Denver Wholesale Florists' Co., of Denver, Colo., was a visitor last week.

Miss Tillie Meinhardt returned home July 16 from a two weeks' trip to Mexico. Miss Meinhardt says she liked the trip so much that she will go again next summer.

Mr. and Mrs. Hugo Gross, of Kirkwood, write that they are enjoying the sights of the great west. They are at present visiting the Seattle exposition.

the city Friday, July 16, attending the funeral of a relative. Mr. Ammann says they are busy at home preparing for fall business.

Word has been received from Fred C. Weber and Theo. Miller that they had arrived safe and sound on the other side of the big pond and had a pleasant trip.

Edwin Denker, of St. Charles, Mo., was a visitor last week. Mr. Denker says that he is on high ground, and that the high water surrounding St. Charles can do him no damage.

J. J. Burke, formerly in the florists' business here, now has a position with the Pullman Co. Mr. Burke paid a visit to his many friends here last week.

John Spacht, of Jerseyville, Ill., was a caller last week, visiting the wholesale and retail florists, who made things pleasant for him.

Mr. and Mrs. H. G. Berning and Miss Berning are visiting the Springs for ten days for the benefit of Mrs. Berning's health.

The new building of the Bentzen Floral Co., at Grand avenue and Herbert street, is nearly completed. This, with the big show house in the rear, will be an attraction in that neighborhood. The company expects to move in early next month.

The greenhouse men in South St. Louis are kept busy during these dull months making alterations, rebuilding and painting. Among them are Frank Fillmore, Charles Beyer, William Schray & Sons, George B. Windler and John Held. They expect the fall trade to start early, and want to be ready with all improvements.

Most of the retail stores and all the wholesale shops closed half a day Wednesday, July 21, for the Florists' Club's picnic.

Walter Retzer, formerly with the St. Louis Seed Co., is now manager of the cut flower department of Grimm & Gorley, the Cass avenue florists.

Mrs. M. M. Ayers is overhauling her Grand avenue store, giving a new coat of paint and making alterations to meet the requirements of her fast growing trade. Mrs. Ayers will rest up at her country home in Clayton this summer.

George B. Windler reports much interest being taken in his casing for building concrete benches.

The stockholders of C. Young & Sons Co. held a meeting at the office of the company Tuesday, July 13, for the election of officers. The officers elected were: President, James Young; vice-president, Harry Young; secretary, William C. Young, and treasurer, C. C. Young. They will start this week to make extensive alterations, putting in a new, modern plate glass front. J. J. B.

THE REVIEW does beat all in selling stuff. Every time I advertise in it I get more orders than I can fill.—S. J. GALLOWAY, Eaton, O.

I SHOULD rather miss my meals than miss the REVIEW, the brightest and best trade paper I ever had. No florist, however small, should be without it.—GEORGE TAYLOR, Lethbridge, Can.

NURSERY NEWS.

AMERICAN ASSOCIATION OF NURSERYMEN.
Officers for 1909-10: Pres., F H. Stannard, Ottawa, Kan.; Vice-Pres., W. P. Stark, Louisiana, Mo.; Sec'y., Geo. C. Seager, Rochester, N. Y.; Treas., C. L. Yates, Rochester, N. Y.

NURSERYMEN will be interested in the statement of B. H. Farr, president of the Peony Society, on page 7 of this issue.

THE nurseryman who wants to get closest to the source of the national wealth will put his agents to canvassing the farms of the west.

NURSERYMEN will be interested in Bulletin No. 149, recently issued by the U. S. Department of Agriculture. It is an 85-page illustrated pamphlet and is entitled "Diseases of Deciduous Forest Trees."

THE Northern Colorado Nursery Co. has been incorporated to do business at Loveland. The capital stock is $10,000 and the incorporators are M. R. Kilburn, J. B. Kempton and A. S. Kilburn.

THE brown-tail moth has appeared at Rye, N. Y., on an estate where it is said to have been introduced by nursery stock from Massachusetts. The commissioner of agriculture has taken charge of the campaign against this insect, and it is hoped to prevent further spread in New York state.

E. R. KONE, commissioner of agriculture in Texas, says, with reference to the nursery inspection law passed by the last legislature, that inspection work begun July 12 under this law must be completed as soon as possible and within a period of about three months. It was started at Tyler, Tex., with the following inspectors: Prof. Fred W. Mally, Garrison, Tex.; Prof. H. W. Stevenson, Reedville, Tex., and F. K. McGinnis, Terrell, Tex. These three inspectors will be in the field continuously until it has all been completed.

THE Indiana State Horticultural Society will hold its summer meeting August 4 and 5 at Centerville. W. C. Reed, the Vincennes nurseryman, is president.

JACOB H. PROST, Chicago's new city forester, has returned from a three weeks' trip to confer with similar officials in eastern cities, and wants Chicago to establish a municipal nursery.

No one has as yet claimed the standing premium of $1,000 offered by the Minnesota State Horticultural Society for a seedling apple tree "as hardy and prolific as the Duchess, with fruit equal to the Wealthy in size, quality and appearance, and that will keep as well as the Malinda."

TRANSPLANTING THE PECAN.

The pecan tree is hard to transplant because it has but few fibrous roots, and the large hole, all tap root theory is a fallacy. The thing required is to grow trees with more fibrous roots, and my experience has been that eastern grown trees are more easily transplanted than those grown in Texas. I attribute this to the fact that the eastern trees have more fibrous roots. Experience has shown that pecan trees which have been transplanted once and then are moved again are more liable to grow than those whose roots have never been molested. I advise the cutting of the tap roots about eight inches below the surface of the ground. This should be done during the winter following the first year's growth. This cutting of the roots of pecan trees causes from three to eight tap roots to form on each tree, and thus enables them to be more successfully transplanted.

ROSENFIELD TO MOVE.

J. F. Rosenfield will remove to Omaha from West Point, Neb., and will establish his peony business at the new location in 1910.

Mr. Rosenfield has bought a tract of twenty-five acres of land on West Dodge street, a part of what is known as the Sievers farm, just outside of Omaha, and during the present summer will begin the erection of a residence and nursery buildings. Next spring he will begin the preparation of the ground to receive the stock and in the autumn of 1910 he will begin to remove his peony stock to the

Peony Nursery of J. F. Rosenfield at West Point, Neb.

new site, which affords many advantages, both as a business location and as a home.

For many years Mr. Rosenfield has farmed at West Point. He took up the peony in a small way when there were few growers west of the Mississippi and has added to his stock year after year until he has become the largest grower in this region. The peony is his specialty; he grows no other nursery stock. He has bought about everything offered in the trade and in addition has raised a considerable number of seedlings, until he has about 700 varieties on the farm at West Point, with stock enough to give him over a quarter of a million plants when they divided for replanting. It is his purpose to weed out the poorer varieties during the next year and to stock his place with only the best of the lot, such as are sure to be in increasing demand for years to come. Omaha will give him a better market, both for cut blooms and for roots, through improved shipping facilities and the greater accessibility of his establishment, though in recent years some of his cut stock has found its way to the Chicago market and his roots have gone all over the country.

INSECTS ON GRAPE VINES.

Under separate cover I am sending you a grape vine cutting, which seems to be affected with some kind of a disease, resembling bacteria in one form and not in another. It appears to me to be stung with some kind of an insect. When I break open the wart-like lumps I find inside a small brown worm, which I suppose has been deposited in the shape of eggs on the stem of the branch. Above the warts I find an opening where I suppose the insect enters to lay its eggs. Can you tell me if it is a contagious disease or not, and can you suggest a remedy for it, as I have never seen anything like it before? The vine appears to have plenty of life otherwise. S. M. P.

This trouble is not uncommon on grape vines grown outdoors. The best and, in fact, the only remedy is to cut off the affected parts and burn them. It is not anything contagious and will not seriously injure your vines. C. W.

PRUNING HEDGES.

Summer is the ideal time for hedge pruning. If not already attended to, any privet hedges should be sheared without delay. The California variety, Ligustrum ovalifolium, is still largely planted, and makes a pretty hedge. Where the temperature does not sink below zero, it is safe to plant, but in the colder northern states L. Amurense, Ibota, or even vulgare, are preferable, owing to their greater hardiness.

By the way, all the privets are easily propagated now from tops in a close frame.

Berberis Thunbergii makes a beautiful low hedge, and as little shearing as possible should be given it, but B. vulgaris will require heading back. Deutzia Lemoinei makes a stiff and effective hedge, during beautiful while in flower. It also should be allowed to grow as naturally as possible.

Arbor-vitæ, hemlock spruce and Norway spruce hedges are all better pruned now. This allows of new growths covering up any bareness and relieving any topiary-like trimming done before winter.

Among deciduous hedges, those of Cratægus should have a summer pruning, in order to thicken them up, as should the American or European beeches. The latter make nice hedges, and hold their foliage well in winter. In hedge trimming always avoid a dead formality, unless you are clipping topiary specimens. In the case of box the proper time to prune is May, just when growth is starting.

100,000 Peonies for Fall Delivery

All of the Leading Varieties from the Cottage Gardens' Famous Collection

Our enormous stock enables us to send out tubers of the very highest quality, and in filling orders we use undivided roots only—assuring an abundance of flowers the first season. This year we offer one, two and three-year plants.

ROOT-PRUNING OF EVERGREENS.

This is an admirable season of the year for California nurserymen to root-prune large evergreen trees that are intended for sale in the coming fall or winter. The complaint is often made that conifers, palms and evergreens do not transplant easily after the weather becomes cold or frosty, even when there is plenty of moisture in the ground. Much trouble could be avoided along these lines if the growers would get in the habit of root-pruning all such stock at this season. There is absolutely no danger at this time to the tree, and but little at a later time, when it is transplanted.

If the trees are growing in nursery rows, the best plan is to soak the ground well around them and dig a trench on each side, cutting in considerably closer to the roots than would be done if it was intended to take the tree from the ground. Cut under completely, so that the tap root is severed, if it has such a thing, but do not dig between each individual tree. Leave enough laterals so that the check will not be sufficient to cause either a falling of the foliage or a stunting of the tree itself. The trench should be dug parallel to the row in which the trees are growing and should afterward be filled and a good soaking given. This is also a good time to remove any excess of top or unruly branches that may offend.

If this plan were followed by our tree growers, there would be far less complaint from those who purchase largely of specimen trees and shrubs, as the chances for their immediate growing, without the customary check, are increased fully fifty per cent. Certain it is that it is a good deal of work to undertake and the first cost of it is considerable, especially at the time of year when sales are few and far between, but it will much more than pay for the trouble when the first assortment of trees is balled next winter. The usual complaint lodged by the planter, that several of his trees are dead, will probably not be forthcoming. G.

PORTLAND, ORE.

The Market.

Business for the last fortnight has been somewhat slow. Summer prices prevail everywhere. Carnations and sweet peas are plentiful, but the quality of the stock is deteriorating. Roses are of normal supply and fair quality. A few asters are to be had and their quality is excellent, but they move slowly. New-crop ferns are plentiful, but a little too soft to withstand shipping.

An unusual rain of several days' duration has caused a general smile among the growers, as it has been quite an additional expense to pump water for the outdoor stock. The bedding season is about over, but there is an occasional call for hanging baskets and outdoor arrangements.

Various Notes.

H. M. Clemmens, of Newberg, Ore., is shipping some fine sweet peas, which are disposed of with profit. In addition, he finds growing strawberries and tomatoes under glass a profitable side line.

The Swiss Floral Co., which does a general retail business, is rebuilding its range at 412 East Seventh street, north, where it will have a better location and facilities for handling an increasing trade.

R. Riegelmann, on Macadam road, is supplying the market with choice strains of sweet peas and realizes top prices.

Joseph Huserik, the wire man, is making an extensive eastern trip, including St. Louis and Chicago, to secure machinery to facilitate the wire business.

C. W. Jolly, representing S. W. Farber, of New York city, called on the trade last week, with an extensive line of brass goods. He reports business on the increase.

Mr. and Mrs. C. F. Kipp, of the Spokane Floral Co., passed a few days in this city, en route to California, on a pleasure trip.

Frank Shibeley, of San Francisco, was a week-end caller. He reports business quiet in the Bay City.

James Forbes has taken advantage of the quiet season to recuperate and is spending several weeks in California.

Geo. Betz, Sr., has been confined to his home for several weeks with typhoid fever. From the favorable reports, we expect to see him in his old haunts soon.

W. T. Symonds, of Decorah, Iowa, is spending several weeks in the northwest. He dropped in to say a good word for the Review. E. R. C.

SEATTLE.

The Market.

After a month of comparative idleness, except for several large decorations, it was with satisfaction and new vigor that we greeted the present month and its gradual increase of business.

Flowers of all kinds are to be had in quantities, from comparatively fancy roses to sweet peas. The prices of medium and fancy quality roses, as well as the other now outside flowers, would no doubt be a revelation to the trade in the east. Roses can be had in different qualities, from 1½ cents to 3 cents, and they are good stock at that. Sweet peas are a glut on the market, bringing as low as 75 cents per thousand for a far better grade than is obtainable in the east. Quantities of other flowers are daily

Graff's Flower Shop continues to be a revelation to the flower buyers of Seattle. Mr. Graff and Mr. Chisholm have just returned from a business trip to Tacoma and Portland. Mr. Pritchard, of this firm, is daily to be seen investigating the mysteries of the Pay Streak at the A.-Y.-P. Exposition. Many landscape ideas can be picked up from the beautiful lay-out of the A.-Y.-P. grounds.

J. G. C.

SAN FRANCISCO.

The Market.

The midsummer dullness continues and the end of it is not yet apparent. The weather, although not as warm as it has been, still keeps the townspeople secluded in the country, and not until the schools open again may we expect a resumption of trade. Flowers are a drug in the market and it appears ridiculous to give any quotations at present.

With the possible exception of long-stemmed Beauties, roses of all kinds have reached the low-water mark in price. Sweet peas are not as plentiful as they have been and there is some demand for the longer-stemmed stock. Valley is in fair supply and moves slowly. L. longiflorum is about out of season and we may expect plenty of rubrum and auratum in a few days. Gladioli of the showy varieties do not sell as well as they did a week or two ago, and the same can be said of dahlias and other outside stock.

With the exception of some funeral orders, there is really nothing doing in the retail stores in town, while the growers and wholesalers have the advantage of more or less shipping to interior towns during the summer months.

Various Notes.

Richard Lohrman has resigned his position as gardener to A. W. Foster, of San Rafael.

The regular monthly meeting of the California State Floral Society was held at the residence of Henry Trilou, July 9.

William Hamilton, gardener to Lieutenant Winship, of Ross station, has recovered from an attack of appendicitis.

Thomas Heatherington is now located at Livermore, Cal.

John McLaren, of Golden Gate park, will confer with the authorities relative to the planting of trees proposed on many of the islands in San Francisco bay.

Paul Eckelman, of San Rafael, has about one-half acre in chrysanthemums for the coming fall trade.

Dr. Parker, the orchid grower of Santa Cruz, Cal., is in town visiting some of the local dealers.

MINNEAPOLIS.

The Market.

Trade continues dull, but stock is somewhat scarce. Roses are at a premium and the other stock is not plentiful, with the exception of sweet peas and a few varieties of common outdoor flowers.

Florists' Picnic.

The Minnesota State Florists' Association held its first picnic at Big Island park, Lake Minnetonka, July 15, and had a most enjoyable time. All the florists of the Twin Cities and a number of out-of-town members of the trade were there, making a total number of about 500. The morning and early part of the afternoon were spent in games. In the latter part of the afternoon the picnickers enjoyed a boat ride, and there were music and dancing both afternoon and evening. The bowling contest takes place July 22 at St. Paul. The winners of the other contests were as follows:

Children's race, Walter Peterson, Minneapolis, first; Herbert Holm, St. Paul, second; Arthur Ruedlinger, Minneapolis, third; Ruby Stern, Minneapolis, fourth; Kent Lynes, Minneapolis, fifth.

Boys' race, B. Busch, Minneapolis, first; Carl Busch, Minneapolis, second; E. Bergstrom, Minneapolis, third.

Girls' race, Hazel Clarine, Faribault, first; Anna Dill, St. Paul, second; May Korowski, St. Paul, third.

Ladies' race, Anna Michaels, St. Paul, first; Bernice Cole, St. Paul, second; Agnes Anderson, Minneapolis, third.

Men's race, Judd White, Minneapolis, first; Harry Slater, second; Harry Dysinger, third.

Tug of war won by St. Paul.

Baseball game won by St. Paul.

Waltz, Miss Helen Greeley, St. Paul; H. E. Geyer, St. Paul.

Various Notes.

William Desmond was very ill last week with hemorrhage of the lungs, but is reported on the mend.

Visitor: H. E. Philpott, Winnipeg, Man.

NEPHROLEPIS SCHOLZELI

The New Crested Scottii Fern

NEPHROLEPIS SCHOLZELI.

This crested sport of Scottii has proven all that has been claimed for it, and it promises to become even more popular than its parent.

It is, without a doubt, the ideal crested fern; a good, quick grower, and makes a salable plant in any size from a 3-inch pot to a large specimen. A profitable fern for everybody.

Awarded the Following Honors:

Shaw Gold Medal, St. Louis Horticultural Society, November 3, 1908, for best plant of decided merit for cultivation, not previously an article of North American commerce.
Silver Medal, offered by the Society of American Florists, through the St Louis Horticultural Society, November 3, 1908, for the most meritorious plant or flower of American origin.
Certificate of Merit, of the Horticultural Society of St. Louis, November 3, 1908.
Silver Medal, Pennsylvania Horticultural Society, Philadelphia, November 10, 1908 for best new plant exhibited.
Certificate of Merit, Massachusetts Horticultural Society, Boston, November 6, 1908.
Certificate of Merit, Dutchess County Horticultural Society, Poughkeepsie, N. Y., October 30, 1908.
Certificate of Merit, Morris County Gardeners' & Florists' Society, Madison, N. J., October 30 1908.

BUFFALO.

The Market.

The last week has only been a repetition of that condition which has prevailed for some time—fairly good stock in the market, but the bulk of it going to waste. The long looked for rain came last week in abundance, followed by cool weather.

Various Notes.

The official date for the picnic has been set for Wednesday, July 28. The committee feels safe in saying this will surpass all affairs ever held by the club. The place selected is the Bedell house, where we always feel sure of good treatment by the management. The program of sports is most complete, after which a fine spread awaits us at the hotel. Adjoining the hotel is the spacious dance hall, where you can waltz with your strawberry blonde. We hope to make this the one grand event of the club year. You will never have more time to spare than right now, so come everybody and enjoy yourselves. You won't regret it, but if you do, call at the box office and get your money back.

J. Wiese and Joe Streit are touring Europe for six weeks.

Wm. F. Kasting is spending the summer at Erie, Pa. R. A. S.

MOUNT VERNON, IOWA.

C. S. Meek has sold his greenhouses to Alex. Cowen and his son, Adair Cowen. Cowen & Son will conduct the business and they expect to enlarge and improve the greenhouses. Adair Cowen was at one time connected with Mr. Meek in the management of the business, and understands it.

Mr. Meek has purchased other ground near his home, which is located just across the street from the greenhouses, and will devote his attention chiefly to cultivating and marketing strawberry plants. He will also grow vegetables and a general line of fruits.

ELMIRA, N. Y.

The florists of this section recently held an enjoyable outing at the foot of Fourteenth street, Elmira Heights, on the bank of Newtown creek. All the usual eatables were on hand. Ball games and quoit contests followed. Jack Dempsey and Dan Carpenter officiated at both, and every one who kicked on decisions was benched, which carried a fine with it. Mr. Anthony, of the U. S. Cut Flower Co., acted as special officer and saw that every ruling was carried out. The game resulted in a score of 5 to 0 in favor of the city florists. The Heights team won the quoit contest.

Ferns in Flats Ready for delivery after July 15

Each flat contains 100 clumps of small plants which can be divided in 3 to 5 plants accordingly, all ready for potting.

We can furnish these ferns grown separately, each flat containing any one of the following sorts, ferns all good salable varieties:

Aspidium tsussimense,
Cyrtomium falcatum,
Pteris adiantoides,
cretica alba lineata,
cretica magnifica,
hastata,
Mayi,
Gilberti,
serrulata,
serrulata cristata,
serrulata variegata,
Wimsetti,
Mixed Varieties.

Price, $2.00 per flat.

FERNS IN FLATS.

KENTIA, 2¼-in. pots, $9.00 per 100, $75.00 per 1000. **COCOS,** 2¼-in. pots, $9.00 per 100, $75.00 per 1000

Begonia Gloire de Lorraine We are headquarters for this sterling plant.

This is decidedly one of the most beautiful and profitable plants introduced in many years. It attains a height of 15 to 18 inches, bears pea green foliage and is fairly smothered with a profusion of soft pink flowers. It is naturally of a compact, bushy form, and blossoms continuously from October to April, making an ideal plant for Christmas decoration. No establishment, large or small, is complete without this begonia.

From 2½ inch pots, for delivery at once. Doz., $2.00; 100, $15.00; 1000, $140.00.

Stumpp & Walter Co 50 Barclay St. New York

GERANIUMS

We want to impress it on the minds of the Florists throughout the country, that we are getting ready to furnish them with Geraniums next season, that we have an immense stock in splendid condition to propagate from, that we are confident we will be able to give you satisfaction in every way, that if you will write us, giving us an approximate number of what you will need, we will convince you that it is more to your advantage to buy good 2-in. stock just when you want it, and just the kinds you want, than to propagate it yourself. In writing for special prices, don't forget to say how many you can use. You can save money by placing your order now.

SPECIAL This week we offer at $3.00 per 100, prepaid, **JEAN OBERLE,** Bruant 1906 introduction, one of the most beautiful among that color known as Peach pink, an exquisite shade of Hydrangea pink, shading tenderly to almost pure white at the outer edges of each petal, the florets are especially well formed, the trusses are actually immense, often having over a hundred florets to a truss, strong, vigorous, clean, healthy grower, free bloomer and stands the sun well.

We stake our reputation on our collection of 1000, in 20 varieties, at $18.50 per 1000 for 2-in. and $25 00 per 1000 for 3-in. An immense stock for immediate shipment

ROCHESTER, N. Y.

The Market.

There is nothing of importance to report this week in regard to trade conditions here. The last week has gone with practically no demand for any kind of stock. Everybody seems to have an ample supply of material to supply all their wants.

Carnations are nearly over. Another week will probably see the last of them. Sweet peas are a drug on the market, and impossible to move at any kind of a price. Overproduction of these flowers is plainly to be seen.

Early asters are just commencing to come in, but, owing to dry weather and the late season, are of poor quality compared with last season. However, with the rain of a few days ago they will no doubt improve from now on, and from present indications will be in good demand.

Various Notes.

George B. Hart and Charles H. Vick have returned from a short fishing trip to Stony lake, Canada.

George T. Boucher is taking a short vacation at the Thousand Islands.

J. W. Keller is spending the summer with his family at Conesus lake.

W. E. McKissick, of Philadelphia, was a visitor in town this week. H. B. S.

LAKE FOREST, ILL.

The third annual exhibition of the Horticultural Society of Lake Forest was held at Durand Art Institute July 21, from 10 a. m. to 10 p. m. Most of the private gardeners of the region were represented, the show was an attractive one, of both flowers and vegetables, and the attendance was good.

The judges were: On flowers—Geo. Woodward, Chicago; H. Skjoldager, Chicago; C. H. Gebhard, Lake Geneva, Wis. On vegetables—Robert J. Sampson, Lake Geneva; Axel Johnson, Lake Geneva; C. J. Reardon, Hinsdale, Ill.

A gold medal, offered for the best collection of greenhouse plants, was donated by Lord & Burnham Co., and Arthur T. Boddington, H. A. Bunyard and others donated trophies.

The officers of the Lake Forest Horticultural Society are:

President—E. L. Parshall.
Vice-president—Fred Jackson.
Treasurer—H. C. Peterson.
Secretary—J. W. Scharfenberg.

THE advertisement did the work—more orders than we could fill.—H. O. HANNAH & SON, Sherman, Tex.

Godfrey Aschmann, the Araucaria King
Is More Active than Ever
Four Houses Filled with the Best. With What? Sure, with ARAUCARIAS, His Specialty

Empty houses! That won't do. What shall I plant? What is the most profitable? Listen to what your neighbor florist has to say. Mr. McGinty to George Know Nothing: "I filled a reasonable portion of my greenhouses last year with Godfrey Aschmann's Araucarias, and I tell you straight out I was only sorry I did not buy more. In two weeks, just when the demand was the biggest, my stock was nearly exhausted. This year I shall be smarter. Last week my order to Aschmann called for just double the amount. I never can lose anything on such an investment as that. Every dollar put in Araucarias yields three to four times the value while we're asleep."

We are one of the largest importers of these well-known and beautiful evergreen decorative plants, the **Araucaria Robusta Compacta, Excelsa Glauca and Excelsa.**

Florists should bear in mind that no home, garden, lawn, etc., is complete without the Araucaria; therefore, if you wish to make money, recommend the Araucaria to your customers. Introduce this noble plant to your trade. We give you a special price, and it will pay you to handle them.

Araucaria Robusta Compacta, Glauca and Excelsa. Our reputation of being one of the largest importers and shippers of this beautiful evergreen decorative plant is so well known, dating far back into the 19th century, that our name, as well as the Araucaria itself, shall never die out, and is still fresh in people's minds, same as when we first started. Why the Araucaria is so popular is because it is an ancient plant, kept by Greeks and Romans as a special favorite in their household, as a good omen.

Araucaria Robusta Compacta and Excelsa Glauca, new importation, 3 tiers, 3-year-old, $1.00, $1.25 and $1.50.

Araucaria Robusta Compacta, specimen plants, 7 to 8-in. pots, 4 to 5 years old, 3, 4 and 5 tiers, 20, 25 and 30 inches high, same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa Glauca. This is a beautiful blue variety, very graceful and beautiful. Specimen plants, 6-in., 7-in., 8-in. pots, 4 and 5 years old, 4, 5 and 6 tiers, 20, 25, 30 and 32 in. high, same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa, 3, 4 and 5 years old, 4, 5, 6 and 7 tiers, 6-in. pots, 20, 25, 30 and 35 in. high, an Elephant for only 75c; a Jumbo for $1.00 and a Holy Terror for $1.25 to $1.50.

Araucaria Excelsa, April (1909) importation, 2 to 3-year-old plants, 5, 5½ to 6-in. pots, 3, 4 and 5 tiers, 12, 14, 16 to 18 in. high, 35c, 40c, 50c, 60c to 75c.

Sago Palm, or Cycas Revoluta, 5½, 6, 7 and 8-in. pots, from 5 to 20 leaves to a plant, 10c per leaf.

Jerusalem Cherries. We offer the best, new improved variety, already laden with large, orange-colored berries, 2½-in. pots, $5.00 per 100.

Begonia Gloire de Lorraine a specialty; also own new improved strain introduced last Xmas is still well in the minds of florists. We have both the deep pink and the light pink variety (Lonsdale), 4-in. pots, 30c.

Kentia Belmoreana, 4-in., 18c, 20c to 25c; 6 to 7-in., 6 good leaves, 75c, $1.00, $1.25 to $1.50.

This is The Florists' Manual

By William Scott

SECOND EDITION

THOROUGHLY REVISED AND BROUGHT UP TO DATE

NO SCIENCE, BUT LOTS OF PRACTICAL COMMON SENSE

"I have several times been consulted by those who would make a beginning in the Florists' business. In each case I have said that the first step is to subscribe for a Trade Paper, and the next to procure a copy of the Florists' Manual." —J. A. VALENTINE, Pres. Park Floral Co., Denver, Colo.

"Find enclosed $5 for the Florists' Manual, by William Scott. It is the best book of the age on commercial floriculture and should be in the home of every gardener."—CONRAD FORBACH, Buffalo, N. Y.

No dry-as-dust botanical classifications, but tells you just how to produce marketable plants and cut flowers in the best and cheapest way.

A. C. Oelschig & Sons, Savannah, Ga.

SALVIAS.

Salvias, fine plants, 2¼-in., 1c. Must have room. Hammerschmidt & Clark, Medina, Ohio.

SEEDS.

COBURN'S SELECTED PANSY SEED.
BEST MARKET STRAIN GROWN.

Our seed is saved from about 12,000 plants, carefully selected, when in bloom, from the 500,000 we grow for our spring sales.

Each plant is carefully selected, color, size, form and substance being taken into consideration, and the proportion of each color is properly balanced.

As a result of over 25 years' work along these lines, we feel justified in claiming to have the best strain of pansies on the market, and we invite trial and comparison.

Growing our stock in this manner, we have only a limited amount of seed to spare, and in order to distribute as widely as possible, we offer it in packets of 1,000 seeds. Price $1.00 per packet (only one to each customer).
I. E. COBURN, 291 Ferry St., Everett, Mass.

PANSY SEED.	Trade pkt.	Oz.
Sluis' Superb Mixture. Flowers of largest size, great variety of colors and perfect form and texture	$.50	$4.00

98 Pages. 32 Illustrations
Forty Cents Postpaid

Florists' Publishing Co.
520-540 Caxton Building
334 Dearborn St., Chicago.

NAMES OF PLANTS.

As a last resource, I come to you for the names of two plants. Five years ago I saw a bed of violets in bloom and, seeing they were something new, bought ten plants for $1. They were owned by a person who knew nothing of flowers or where the original stock came from. This violet begins to bloom October 1, and is a dark royal purple in color, with a heavy perfume. Until about the middle of November the stems are not more than six inches long, but from then until May they are simply wonderful, from ten to fourteen inches long, with blooms the size of 5-cent pieces, and they are the heaviest bloomers I ever saw, with a mass of foliage, the leaves being three inches across. I have an ideal soil for them—light, rich, sandy loam.

From those ten plants I now have a 55-foot row, eighteen inches wide, with many thousands of plants. Can you name this violet for me from this description? The winter foliage is dying off now and new foliage is starting.

The other plant I want named I send a sample of. It is a hardy, dark red carnation, very fragrant, with foliage broader and darker green than the foliage of florists' carnations. It grows from eighteen inches to thirty inches tall, according to the soil, and came through unharmed last winter in the open ground, unprotected, though we had a drop in February to 3 degrees. It begins to bloom in April, and is never without bloom until December. Each stem has from four to a dozen buds, a cluster of three to five on the end of the stem, then side shoots down the stem, with clusters of two to four on each side stem. When all are allowed to stay on they are about the size of 50-cent pieces. When one bloom only is left to center and side shoots, they are one-third larger. When I cut I take all the stem, and this causes it to stool out and send up many fine shoots, each with its clusters of buds and side shoots, and a single stem will make a clump of eighteen to twenty stems in a season. I plant the bloom stems in a trench after the blooms have faded, and almost every one roots.

I have sent samples to many florists, but none has been able to tell me what it is. The stock was brought here from Texas. I would give a fancy price for stock like this in pink or white, as it is the most persistent blooming and hardiest, finest stemmed carnation I ever saw. I think I could make a good income from the violet and carnation alone, were I where I could dispose of the cut blooms. This is a small town, where flowers are mostly given away. The enclosed bloom came from a clump of thirty-four stems, two years old, with over a hundred buds and blooms, not disbudded. R. D. M.

You do not state whether the violet is single or double variety. I will assume that it is a single form, and probably the well known variety, Princess of Wales, which would be perfectly hardy in your Georgia climate. While you get excellent stems, ten to fourteen inches long, the flowers, if no larger than a 5-cent piece, do not compare with those grown farther north, which will often cover a silver dollar. Probably you could improve the size of your flowers by growing some in a cold greenhouse.

The specimen carnation flower was pretty well shriveled when received. It is probably some variety of the hardy garden pink, Dianthus plumarius, which can be had in quite a wide range of colors. The general run of these do not grow more than twelve to fifteen inches in height, but they are quite persistent flowering. Mrs. Sinkins is an excellent double white; Snowball is a newer double white of fine quality. May is a delicate pink. Write to some of the advertisers of hardy herbaceous perennials, and you will have no trouble in getting some other colors of hardy garden pinks or carnations, under head of Dianthus plumarius. C. W.

THE HISTORY AND CULTURE OF

Grafted Roses

FOR FORCING

By ALEX. MONTGOMERY, JR.

"The most important contribution to the modern literature of the Rose."

Containing Practical Description of the Process of Grafting with Full Details of planting and culture, also Directions for treatment to carry the plants a second year.

"Of much interest to every Rose grower and of utmost value to growers of Grafted Roses."

FULLY ILLUSTRATED. PRICE, POSTPAID, 25 CENTS.

NOW IS THE TIME TO

BEGIN!

...THE...

Chrysanthemum

By Arthur Herrington

Formerly president Chrysanthemum Society of America.

The most complete and comprehensive work on the cultivation of the chrysanthemum that has yet been published in America. Its scope and character may be gleaned from the list of contents, which comprises chapters on composts; planting; benches, boxes or pots; general cultural details; crown and terminal buds; feeding, its object and application; care of the buds; exhibition and judging; specimen plants, plants in pots; raising from seed and hybridizing; sports; hardy chrysanthemums; chrysantnemums for south and west; insect pests and diseases; classification and selection of varieties for special purposes; history of the chrysanthemum, etc. The book will be welcomed for the lucid, comprehensive, as well as the practical character of its contents. Handsomely illustrated. 168 pages, 5x7 inches. Price 50c postpaid.

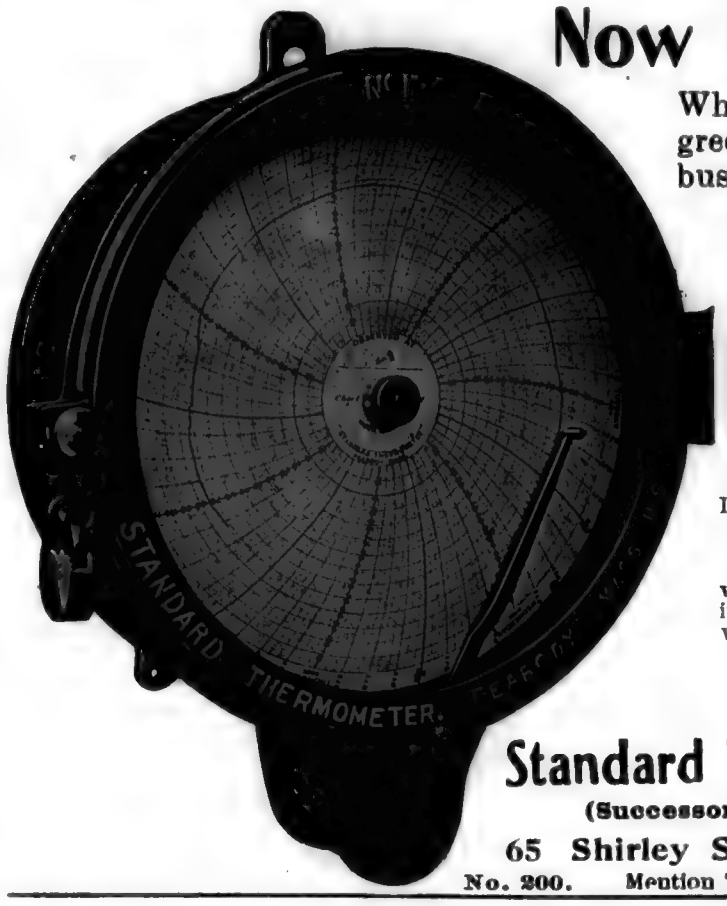
Greenhouse Heating.

The United States Geological Survey has been investigating the waste incident to smoking chimneys and estimates that ten per cent of the country's fuel bill can be saved by the smokeless burning of coal, which now is practically accomplished by several mechanical stokers.

PIPING A ROSE HOUSE.

Please tell us how to heat a house 16x50 with hot water, to suit Bride and Bridesmaid roses. The height of the house from ground to ridge is eleven feet, and four and one-half feet from ground to gutter. This house is located on the south side of a shed, both running east and west. I should like to use a 2½-inch flow and 2-inch returns. Please give estimate for zero weather, in this Iowa climate.



Z. & S.

It will take ten 2-inch returns to keep the house at 56 degrees in zero weather. These should be put just under the edge of the benches; if three benches, one on each side; if two benches, three pipes under each bench, with one extra pipe on the shed wall and the remainder on the exposed side. I would advise putting in a 3-inch flow and a 3-inch main return into the boiler. Set the boiler in a pit about twice as deep as the boiler is high. Get the vertical flow and return as long as possible, to insure a good working system.

G. T. E.

CAPACITY OF BOILER.

I have a steam boiler which I wish to turn into a hot water boiler. It is of the bricked-in type, with a firebox 3x4 feet. The boiler is thirty-six inches in diameter in the upper section, the total height being six feet. In the part back of the firebox there are eighteen 4-inch flues,

What is the Most Vital Point in Grate Construction?

Grate makers and users agree that the most important point is to keep the air spaces open as long as possible under all conditions.

We guarantee to keep the air spaces of the

Martin Anti-Friction Rocking Grate

open longer under any conditions than can be done by any other grate in existence.

The hottest fire you can build will not warp a "Martin," and it can be installed without disturbing the brick work.

We refer to Peter Reinberg, Emil Buettner, Bassett & Washburn, Wietor Bros., Adam Zender, Sinner Bros., Albert Dickinson Co., and many others.

Write for testimonials and full particulars.

THE MARTIN GRATE CO., 283 Dearborn Street, CHICAGO, ILL.

KENNETH ANDERSON MFG. CO.

33-37 East Atwater Street, DETROIT, MICH.

Can handle Michigan and Northern Indiana orders, only.

To the man who needs a Boiler

THE KROESCHELL BOILER

was installed to heat over six million (6,000,000) square feet of glass during the past three years.

Expressions from the men who know:

Used steam; was advised to change to your hot water boiler. Find it about half the work with your boiler. We would have no other.
STERNITZKE BROS., Park Ridge, Ill.

Have handled many greenhouse boilers of other makes, but Kroeschell beats them all. I get perfect circulation in 30 minutes. WM. OTTO, Oshkosh, Wis.

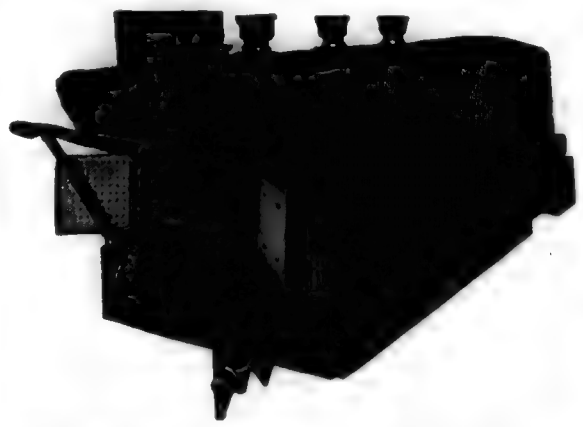
Former boiler, 16 horsepower steam; as much difference as between day and night. Your boiler does not need recommendation. Will recommend itself wherever used.
THEO F. DAMEROW, Grosse Pointe, Mich.

Your boiler, in my estimation, is the best in use today. We have two of them.
POTTER & SONS, Waukegan, Ill.

When we rebuilt our plant, we were undecided whether to use your boiler or a cast iron boiler. We are satisfied we made no mistake in using Kroeschell.
YEATMAN & WAY, Kennett Square, Pa.

Have fired greenhouse boilers since 1885, both steam and hot water. Yours suits me the best. I have two of your boilers. At one time I had two cast iron boilers working together and during a blizzard the rear section of one boiler gave out and the front section of the other sprung a crack a couple of months later. No more cast iron boilers for me. I came very close to freezing out in both instances. G. M. THOST, DeSoto, Mo.

The Kroeschell Generator



prevents boiling over, cures sluggish circulation, saves fuel, smaller mains can be used, water can be heated to 240° without boiling, increases circulation, 3 to 5 times faster; no hot water system complete without it.

HAVE YOU EVER INVESTIGATED

the one sure thing

KROESCHELL
BOILERS

See the simplicity of construction. Plate material, NOT CAST IRON. Long fire travel, thin water ways. The best and the most heating surface in the world for the money.

THE KROESCHELL BOILER will give you more heat with the same piping required by other boilers, and with less fuel.

Send for our catalogue.

Kroeschell Bros. Co.
51 Erie St., CHICAGO

THE KROESCHELL BOILER

replaced 1346 cast iron boilers in 1905, 1906, 1907, and many in 1908.

Expressions from the men who know:

We are very well pleased with your boiler. I have had fourteen years' experience in heating, six with gravity steam and eight with vacuum, but give me the hot water system for all purposes. Use me for references any time.
E. LIGHTHISER & SON, Xenia, O.

Have used upright boilers, tubular boilers, and cast iron boilers. Your boiler heats up better and easier than any boiler we have ever had anything to do with. If we ever buy another boiler, it will certainly be a Kroeschell.
POOLE & PURLIANT, Washington C. H., O.

I have fired boilers both here and in Europe for the last forty years. The Kroeschell is the best type of boiler I have ever used. I have two cast iron boilers, also a locomotive boiler coupled with yours, but did not need to use the cast iron boilers this winter. Your No. 7 boiler is rated at 15,000 sq. ft. of glass and carries 25 000 sq. ft. of glass until the outside temperature goes down to 10° of frost. We have no trouble to keep temperatures in our houses with easy firing since we installed your boiler. The main flows and returns are heating our potting shed and packing room, which are not included in the amount of square feet of glass. From the boiler to the farthest end of our violet houses and return is 800 ft. and circulates very quickly.
THE SALTFORD FLOWER SHOP,
Wm. D. Saltford, Pres.
Poughkeepsie, N. Y.

The Kroeschell Piping System

is being installed by many progressive florists. 1¼, 1½ or 2-in. threaded pipe, or 4-in. tubing is used. Boiler can be set on level with greenhouse walks. You do not need deep boiler pits.

Mention The Review when you write.

and in the part above the firebox there are thirty 3-inch flues, these, of course, being each four feet longer than the 4-inch flues. What horse-power would this boiler rate at, and how much radiation would it have? How much glass could I heat with it? Do you think it would do as much service as a hot water boiler as if run by steam? M. B. S.

This boiler ought to carry about 15,000 feet of glass. The boiler is about sixty horse-power. I cannot figure the radiation, as you do not give the length of the boiler. The boiler will heat twice as much glass by steam as by hot water, but it will, of course, entail greater operating expense. G. T. E.

LOCATION OF BOILER.

I am somewhat puzzled to know just which would be the most convenient plan for a boiler-room, as I contemplate setting new boilers and want to set them so as to be most convenient and time saving. Is it practical to excavate for a boiler-room where there is no danger of water getting in? We use the Morehead return steam trap, and our present boilers are on the level. We want to place the new ones near the driveway which runs north and south along the east side of the place, so as to be able to have the coal shed close to driveway. We started at the west side of the place, and are working east, with houses that run north and south, and expect to fill in the space between the present houses and the driveway spoken of above in the near future, so that the passage along the north end of the houses will extend to the boiler-shed. Then the boiler-shed will be at the north end of the houses. I am figuring on two tubular boilers 5x14 feet. How much glass should these boilers handle on a 12 degree below zero night, to keep 56 to 60 degrees? They have seventy-two 3-inch flues. R. H. E.

It is the most practical plan to excavate a pit for the boiler. Do not be afraid to go deep, as there is nothing like head-room in a boiler-house. The location

Mention The Review when you write.

of the proposed boiler-house is the best place there is. In the heating of the houses from here it would be best to run a main in a covered pit across the north end of all the houses and a main return also on the south end. Keep the return and main underground. Put a vent pipe in the main return where it drops into the boiler. I should say a 60-inch boiler would carry about 30,000 feet of ground covered. G. T. E.

TO RAISE TEMPERATURE.

I have two greenhouses. They are ten feet high and forty feet wide, and I use hot water with an overhead flow. It works satisfactorily, but in cold weather, say when it is 15 degrees below zero, I cannot keep the temperature any higher than 50 degrees. I have two feeds, one 4-inch and one 3-inch. The 4-inch is carrying two strings of 4-inch and five of 2-inch, and the 3-inch is carrying four of 2-inch, one of 1¾-inch, and five 1½-inch. Will you please tell me how much more pipes I will have to have in order to have a temperature of 70 degrees in such weather as 15 degrees below, and how many more 4-inch will the 4-inch feed stand? Both feeds leave and return independently of each other. I also have two expansion tanks, one forty gallons and one thirty gallons. They are at the farther end of the houses. Or do you think that I could get better results by using a hot water generator? If so, could I use it with the two feeds and returns as they are, or would I have to have them both in one? D. U.

You would have to have four more 2-inch pipes in each house. The 4-inch flow will carry them all right, but I would put in a 2½-inch flow with the 3-inch one. Raise your expansion tanks as high as possible. The generator would work best on one flow and return, but you could run it on separate flows all right.

Draw off all the water in the system and give the boilers a good cleaning out of soot and rust, and it will help you out a great deal. G. T. E.

I WISH your valued paper every success it merits, as it is the most instructive trade publication printed today, and I would wish that you were compelled to use ten tons of paper, instead of nearly three, as I truly believe every florist would be instructed that would read it. But then, again, you might become bankrupt, as you surely give lots of reading for the money.—FRANK M. BAKER, Attleboro, Mass.

WHAT WILL The Burnham DO?

Here is what it has done for two growers—we have hundreds of such letters on file.

Mr. E. A. Corson, Rochester, N. H., writes:

"There are no kicks coming from this quarter, I can tell you. I have nothing but words of praise for Burnham Boilers.

"I heat my greenhouse easily. One night with the thermometer 15 below zero, I left my fire at 11 o'clock, and at 5:30 in the morning the temperature was 50 degrees. I think the boiler a dandy."

Mr. Cyril H. Barry, Green Lake, Wis., says:

"In my 20 years' experience in running greenhouses, the Burnham Boiler has them all beaten for easy firing. The circulation in both houses and hot beds is perfect. I made a critical examination of plant at time of testing, and found everything o. k.

"Have never seen such a bunch of conscientious workmen on a contract job, as those you sent out here, and I am well pleased with everything."

The Market.

We are having hot weather at present and trade is not rushing. Vacations are in order and the clerks in the florists' stores are taking turns in going away. Now and then a funeral and here and there a party or two are the only excitement in the dull season.

Various Notes.

Mr. and Mrs. Adolph Jasperson, of Warren, Pa., were in the city recently as the guests of Mr. and Mrs. Charles Offerle.

John Kallenbach, foreman at the Baur Floral Co.'s greenhouses, has returned from his vacation, which was spent at Niagara Falls and Rochester, N. Y.

Dr. Harry Clawson and family, of Warren, Pa., who have been the guests of Mr. and Mrs. Niemeyer, returned to their home last Monday.

Defective electric wiring caused a small fire in the wainscoting of the store of the Baur Floral Co., in the Majestic Theater building, July 14. The fire originated in the switch box. The fire department was on hand promptly and prevented what might have been an exceedingly disastrous fire. The damage is estimated at about $5,000, partly covered by insurance. B. P.

It gives me pleasure to renew my subscription, as I owe my success in large part to the Review.—F. W. Brooke, Ithaca, Mich.

I shall have to ask you to cancel my advertisement in the Review, as I have sold out of the stock listed in it and have nothing else to wholesale.—Carlman Ribsam, Trenton, N. J.

PROVIDENCE, R. I.

Various Notes.

William B. Hazard had twelve handsome large pieces for the King funeral July 14.

The floral beauties which adorn the slopes in front of the Union Station are the subject of much favorable comment. They are cared for from the greenhouses of Miss Florence Willard.

Samuel Kinder, of Bristol, is driven to his full capacity with private estates in Warren and Bristol. He has a force of between a dozen and twenty men all the time.

John F. Wood had special Masonic and Odd Fellow pieces for the funeral of Seth M. Albro at Wickford July 17.

S. Baker, of South Seekonk, is benching a large new house to violets. He raises singles and doubles, as well as whites. He was formerly at Poughkeepsie, N. Y.

Robert Shoch, for M. Rice & Co., supplies, of Philadelphia, Pa., was in the city July 13 and 14.

Edward Sutermeister, bulb dealer, of Boston, visited the local florists July 15. He enjoyed a trip down Narragansett bay by steamer, stopping at Field's Point for a Rhode Island shore dinner.

Mr. and Mrs. Robert Johnston, of Johnston Bros., left July 19 on a two weeks' vacation, which will be spent with relatives at Monnomonock hotel, Caldwell, N. J.

Thomas Curley has been granted a permit for the erection of a new greenhouse at 15 Harkness street. It is to be 24x75.

Edith Frances Banning, for several years bookkeeper for T. R. Peterson, was married July 16 to Harry Charleton Everett, of East Providence.

J. F. Dayton, of the Arts and Crafts Basket Co., Madison, Ohio, was a visitor in town last week.

One of the finest private greenhouses and floral displays on the west side is at the estate of B. B. Knight, the millionaire mill owner. James McGinley is gardener.

Alexander H. Johnson, of George Johnson & Son, was one of the special guests at the complimentary dinner tendered by Col. Joseph E. Fletcher to the First Light Infantry Regiment at Pomham July 15.

The J. A. Budlong & Sons Co. has just let the contract to build fourteen two tenement dwelling houses, on its plat near their greenhouses and farm at Auburn.

George F. Williams, of W. E. Barrett Co., is at his cottage on Prudence island, in Narragansett bay, for the season.

July 14 was the fifteenth anniversary of the great hail storm in Newport, when hailstones larger than hens' eggs fell in large quantities, and nearly all the greenhouse glass was broken in the north and west districts of the city. W. H. M.

INDIANAPOLIS.

The Market.

Business for the last week has been quiet. Except for one or two busy days, brought on by funeral work, there has been absolutely nothing doing. Roses, with the exception of Killarney, are hardly fit to cut. Carnations are not much better. Lilies are about the only fit flower to be had, and they can be used only in funeral work. Asters are not of good quality yet, and peas are on their last legs. Outdoor stock is looking fine, owing to numerous rains.

Various Notes.

The Pahud Floral Co. is rebuilding two of its houses.

Hans Kipke, of A. Wiegand & Sons, is spending a few days in Chicago.

The City Florists' Club will have its picnic Thursday, July 29, at Germania park. Judging from the committee in charge, this should be a real picnic. There is to be a ball game between the North and South side teams. This should be an interesting game, as there is a little feeling over last year's game. The committee in charge has arranged for foot, sack and potato races and numerous other events. All florists are invited.

Charles Knopf, of Richmond, Ind., was in town this week. Mr. Knopf is the inventor of a steel railway tie, and was in the city looking after matters pertaining to it. Mr. Knopf says he is cutting several thousand fine roses daily.

John Hartje has aspirations as a pitcher.

Roepke & Rieman Co. suffered some inconvenience from the high water during the recent heavy rains.

H. W. Rieman has a fine lot of asters coming on. H. L. W.

BAR HARBOR, ME.

George B. Dorr is installing the Skinner watering system over about thirty acres of the Mount Desert Nurseries. Part of his water supply will be obtained from the town of Bar Harbor, but the major portion will come from a large reservoir on the side of the mountain above the nurseries, which will give an abundant supply and extra strong pressure. Frequent droughts in summer of late years, entailing considerable loss of nursery stock, determined Mr. Dorr to render himself independent of climatic conditions. C.

The Point Is This

We are having printed a most beautiful Catalogue of U-Bar Greenhouses. It is going to be by far the finest thing on Greenhouses ever published. It is one of those catalogues that is not only illustrated in the finest kind of way, but tells you what you want to know in just the way you want to know it, and gets at it quickly. Now this complete catalogue will not be ready for a few weeks, but rather than keep you waiting, we have had a very limited number of advance sheets of the first sixty-four pages printed and bound up ready to send to you. It is really the cream of the catalogue. If you write at once, mentioning the fact that you saw this announcement in THE REVIEW, you shall have a copy by return mail; but don't wait and then blame us because all these special copies are gone.

THE RETAIL FLORIST.....

SCHROETER'S DECORATED AUTO.

Automobile parades are becoming so frequent that they deserve the attention of retail florists, not only as a source of revenue through the decorating work done for others, but because of the opportunity for advertising these parades afford.

At Detroit there recently was an automobile parade with over a thousand machines in line. Many were decorated, quite a number of florists getting a share of the work, and the machines they decorated winning the prizes, but B. Schroeter was the only florist who went in for the available advertising. Not being the possessor of an auto, he was furnished one by the Cadillac people. The car was one of the touring type. On the back was mounted a large canopy, entirely covered with wistaria; the balance of the machine was also trimmed with this pretty flower, made of paper, of course. On the bonnet of the engine was mounted a large eagle. Ribbons, etc., were so used as to produce quite a pretty effect. In fact, it was later announced that had not Mr. Schroeter displayed his name on two small silk banners, he would have been given the first prize.

The accompanying illustration shows the machine as the parade was about to start. Many florists will recognize Hugo Schroeter, the REVIEW'S Detroit correspondent, on the left front seat, and Mrs. Schroeter, also at the left.

NATURAL FORMS IN DESIGNING.

Discretion in Using Them.

After analyzing natural forms and learning a few of their fascinating disguises, an interested student is fairly possessed with a desire to try his own hand at creating, and if he is impulsive he may do some foolish and immature things. A new world has opened up to him. He longs for opportunities to do large things, often overlooking the many little things which must occupy the most of his time. But these same little things are, after all, the best, for where every flower must count, details will be more carefully looked after.

In this discussion the term "design" should be given the widest application possible. Any assembly of flowers or foliage, be it a vase, bowl, basket, corsage, hand bouquet, funeral piece, a figure of a decoration, or even two or three flowers put together, constitutes a design. In no case, unless expressly stated, does it apply to a funeral piece only.

The same principles which apply to the arrangement of funeral pieces apply to house decorations, centerpieces, baskets, all kinds of bouquets, and any other fashion or scheme by which flowers, foliage or plants, or all together, are used.

Imitation and Invention.

Following up the statement made in the preceding article, where the subject of natural form was discussed—that all forms came originally from nature, the questions naturally occur, "How, then, can anyone do strictly original work? Must we be copyists only? Although a feast of color and form is spread before our eyes continually, why cannot our intelligence evolve something new under the sun; or must we be content with reproducing what we can discover? Is invention a scientific and never an artistic accomplishment?"

Various influences often cause two persons unknown to each other to investigate or invent the same thing at the same time. The results are given to the world at the same time, each person rightly claiming the honor. So far as a person's own knowledge and observation are concerned, he may do many things that have never been done before, and in that sense they are his inventions. He may never have seen them in nature, yet that does not prove that they do not exist somewhere, in some form or many forms, for nature mimics herself, as in the cases of resemblance between insects and flowers.

Automobile Decorated by B. Schroeter, Detroit.

Some Personal Experience.

A bit of personal experience will be pardonable here, to illustrate the fact that one may invent designs of whose existence he is not aware. Once I decorated the front wall of a chapel with a tapestry of holly berries in long strings about a quarter of the distance across the left portion of the space. On the opposite side of the wall was a huge spray of wild smilax, made of a number of pieces of smilax fastened together and having the appearance of being all in one piece. The spray started quite broad at the lower right-hand corner and, after covering the most of the right side of the wall, tapered to the upper left-hand corner of the space, crossing the lines of the holly tapestry. The form of the design might be described as a series of straight lines parallel with the left-hand edge of the rectangular wall space, with a triangular spray of wild smilax extending from the upper left-hand corner to the lower right.

So far as I knew, that decorative scheme was my own invention, nor could I ever remember having seen it used. Some time afterward I saw a druggist's window floor filled with moth balls. They had not been there many hours until crystals of naphtha began to form upon the window glass and I was surprised and delighted to see the form in which they arranged themselves. Lines of crystals formed like tapestry up and down one side of the window, while a collection of crystals formed a graceful triangle, cut into by delicate traceries of the crystals, all the way from the corner where the tapestry lines started down to the opposite lower corner, filling in all the triangular space with its beautiful, frost-like sprays. Shall we say it was owing to the action of light or heat that the central space did not fill, or was it not some immutable law of design which guided those tiny crystals in correct and orderly lines?

The Artist and the Bungler.

In one sense, design is copying, and

Some Personal Experience.

A bit of personal experience will be

that one may invent designs of whose existence he is not aware. Once I decorated the front wall of a chapel with a tapestry of holly berries in long strings about a quarter of the distance across the left portion of the space. On the opposite side of the wall was a huge spray of wild smilax, made of a number of pieces of smilax fastened together and having the appearance of being all in one piece. The spray started quite broad at the lower right hand corner and, after covering the most of the right side of the wall, tapered to the upper left hand corner of the space, crossing the lines of the holly tapestry. The form of the design might be described as a series of straight lines parallel with the left hand edge of the rectangular wall space, with a triangular spray of wild smilax extending from the upper left hand corner to the lower right.

So far as I know, that decorative scheme was my own invention, nor could I ever remember having seen it used. Some time afterward I saw a druggist's window floor filled with moth balls. They had not been there many hours until crystals of naphtha began to form upon the window glass and I was surprised and delighted to see the form in which they arranged themselves. Lines of crystals formed like tapestry up and down one side of the window while a collection of crystals formed a graceful triangle, cut into by delicate tracings

of the crystals, all the way from the floor. The tapestry lines started over to the opposite lower corner, being parallel to a rectangular space as to its right hand edge, just like sprays. Shall we say it was owing to the action of light or heat that the central space did not fill, or was it not some unalterable law of design which guided those tiny crystals in the most orderly lines?

The Artist and the Bungler.

yet, in the strictest sense, he who copies is no designer. After getting the scheme of the lines which a plant or a branch and foliage make, he may follow it exactly, but if he has individuality he will extend some of the lines, shorten others, leave out some, change the curves on some, add some lines, but all will conform to the original grouping.

To illustrate: He may need a new design scheme for a rose spray, and, as he looks about in the garden, a small shrub with long, slender branches appeals to him as a graceful suggestion. It may be a shrub of not over three feet in height, with as many as seven branches, and all told it may be no larger than an ordinary casket spray. If he is a blundering designer he will try to make seven branches to his spray, all headed the same way, and he and everybody else will be dissatisfied with the result. He will probably go back to some old scheme which he has used before. But, on the other hand, if he is a clever designer he will remember that the bush has an all-round space in which to spread itself, but that his spray has only a flat surface on which to disport itself. He will then sensibly cut out about one-half of the branches and shorten another, and his product will be a loose spray with two or three tips of uneven length, well separated, and it will be fresh and attractive.

Where Taste Enters.

Where to draw the line, what to adopt and how much to reject, is where some halting opinion may cause trouble. But just at this point, Taste enters and in her luminous presence things appear as they should be. Taste may be cultivated, but a germ of the blind instinct must be inborn in the designer. To illustrate by other examples: A clover head as a design is beautiful of itself, but when we come to transplant it bodily into a design plan, there is another puzzler. If one attempts to construct a hand bouquet like a clover head he will carry out a ridiculous extreme, but if he singles out the outline of a single floweret from the clover head and makes a spray of small flowers after its pattern, he will have a piece of most dainty design.

Again, make an outline of an oak leaf and use it as above for an aster or mum spray. Add a few oak leaves with the flowers, to complete the uniformity of the design.

Simplify, then; take a fractional part of a natural form as a starter for a design. Because a pine cone is a natural form is no reason why it should become the ideal for a bride's bouquet, but it is a suggestive idea for a drop decorative feature in a festoon or other wall decoration.

The Intricate Design.

Intricate forms should seldom be adopted bodily. The question sometimes occurs, "Can a decorative piece be too elaborate if the designing is correct?" When you examine some of the details of the carving on a few of the famous buildings of the old world and hear their praises sung by the best critics of all ages, you are tempted to cultivate an appetite for complicated design. But most flowers are complicated designs, to begin with, and except in cases where the space is large and the view clear for a long distance, the complicated designing had better be ruled out. A warrant for elaborate designing is found, however, in the complicated series of color markings of many flowers.

Many people object to massing flowers and solid funeral pieces, as being unnatural. Most emphatically, it is not unnatural. It is quite natural and one can easily see examples of it everywhere. Trees are clustered together in groves. Flowers belonging to the composite order are fairly packed together, as in the clover, sunflower and cornflower. Massive work can be made beautiful if properly decorated, but a designer should not allow himself to follow this style to the neglect of others.

Freedom and Its Limits.

The fact of the existence of untrue corresponding sides of leaves and plants encourages freedom in designing and trimming. However, there must be found in every floral design a certain balance and poise, even although it may not be evident at first glance. But where a prominent feature bends out to one side, a corresponding part should project somehow in the opposite direction. The fulcrum should be at the center of the piece, and the tips of the opposite points should be somewhere near equal distances from the center.

The principal difficulty, then, is adapting the correct design to the occasion. No rule for this can be found except that rare gift, common sense, guided by at least a glimmer of natural taste.

Gertrude Blair.

NOTICE

Certain florists of this city in soliciting orders for flowers for funerals are so lost in their zeal to obtain business as to fail to appreciate the amenities due the grief-stricken, and inconsiderately intrude themselves or their grasping representatives on families suffering from the shock incident to the loss of those near and dear to them. These ghouls of the business are frequently rebuked by the indignant mourners and friends of the deceased, but their actions sometimes tend to create a false impression of the methods employed in the flower business, and those of us who conduct our efforts along legitimate lines are often unjustifiably criticised. We appreciate that flowers as a gift are usually the best external evidence that persons have of showing their sentiments towards the departed and their family, but we most emphatically disapprove of the tactics employed by the inconsiderate element referred to. Their importunities have grown akin to a common nuisance, and my purpose in writing this letter in behalf of my fellow-florists is to ask the public to aid the reputable dealers in our efforts to correct the abuses by giving short shrift to these objectionable solicitors. Yours truly,

Thos. F. Galvin.

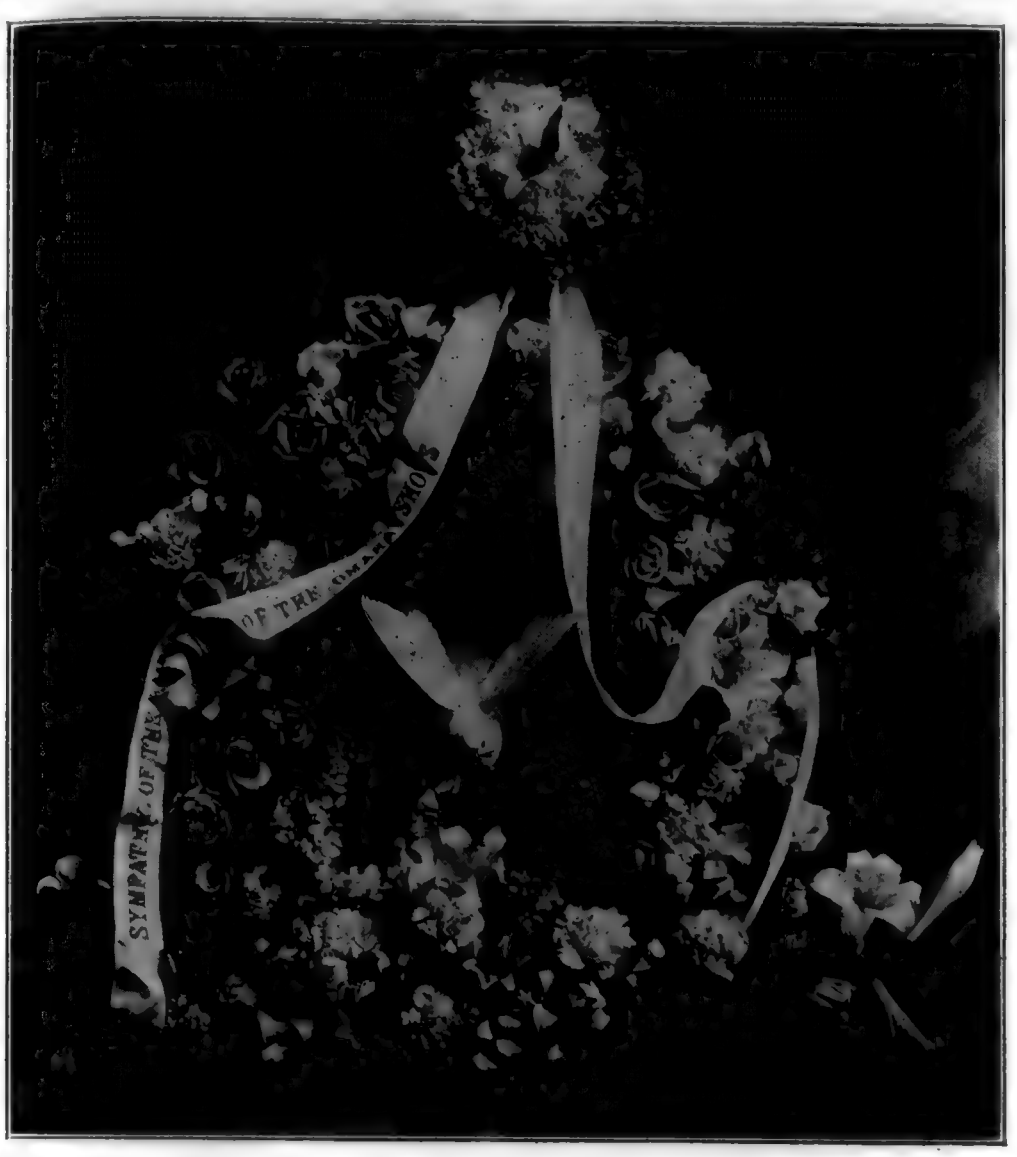
Newspaper Advertisement Against Crepe Chasers.

GALVIN ON CREPE CHASING.

The Thomas F. Galvin corporation at Boston purposes to discourage the practice designated as crepe chasing. In an open letter, published as an advertisement in the Boston dailies, Mr. Galvin says the practice has grown until the importunities of the solicitors have become akin to a common nuisance. He believes that the light of publicity let in on the practice will serve to correct the abuse and at the same time will relieve the better grade of florists from the stigma which attaches to all florists because of the despicable methods practiced by those on the fringe of the trade; no florist deserving of the name obtrudes himself upon any family in time of death; he must wait until he is called.

THE SIOUX CITY GATES.

The gates ajar shown in the accompanying illustration was made at the store of Rocklin & Lehman at Sioux City for the recent funeral of a railroader, and one of the florists' hardest problems was how to dispose of the inscription which was demanded. The committee that collected the money for the design insisted upon the inscription: "Sympathy of the employees of the Omaha shops," which is a whole lot to put on any floral piece. Rocklin & Lehman accomplished the task by using gold letters on a long streamer of ribbon, as shown in the picture. The conventional gates design was varied by adding a star at the top and by perching a dove on one of the gates. The flowers used included roses, carnations, sweet peas and lilies, the piece measuring five feet from base to star.



July 22 Michael Rocklin bought out the interest of his partner, Julius Lehman, and will continue the business individually, but will retain the firm name without change. The second illustration shows the store front as it appeared one day last week. The habitues of the Chicago market will recognize Mr. Rocklin. He was for fourteen years with E. H. Hunt and for two years with Bassett & Washburn before going to Sioux City about a year ago to engage in business for himself.

ASTER DISEASE.

We are sending a diseased aster plant. Please state what the disease is and its cause and cure, if possible. Since we have sent the entire plant it is hardly necessary to make any remark as to the effect of the disease upon the plant, especially as we take it that this is probably a common disease of this flower. As you see, it absolutely destroys the flower and, after it takes hold upon them, does away with all chances for flowers. C. A. D.

There are three principal diseases of asters. First, root lice of a bluish color attack the roots and cause the plants to wilt and die; second, stem-rot, shown by the wilting and final dying down of affected plants, the stems appearing of a dark color just above the surface of the ground; third, the yellow disease, which latter appears to be the trouble you have. For any of these diseases it is doubtful if there is any real remedy once the disease has appeared, nor is it known with any certainty what causes either the stem-rot or yellow disease.

The last named trouble causes the plants to have a somewhat stunted and abnormal appearance. Any flowers formed usually are of a sickly yellow color and come malformed. Occasional plants will be found affected in this way all over a bed and in practically every kind of soil. Investigations at the agricultural experiment stations of quite an

Gates Ajar by Rocklin & Lehman, Sioux City, Iowa.

exhaustive nature have failed to find any cause for this disease, but have suggested a number of possible reasons, none of which, however, meets the case. Seed secured in small quantities from one or two diseased plants actually produced plants which were in nearly every case perfectly healthy, which would seem to upset any theory of seed transmission in this case. A somewhat similar disease affects marguerites and so far no remedy has been found for this.

The healthiest breadths of asters seen outdoors usually contain occasional yellowed plants. A lack of chlorophyl in the foliage usually distinguishes them from the other plants. I have never seen asters grown under glass for flowering purposes affected with the yellows. I wonder if other growers have? There may be something in the climatic conditions, especially the amount of rainfall, which causes the disease to appear.

Asters should, if possible, have fresh ground each year. If it can be manured and plowed in the fall, it is a decided advantage. They like rich soil and are far less likely to go diseased in it than in poor land. I have found that plants raised under glass are more liable to be affected with stem-rot and yellows than those sown outdoors. C. W.

OUTDOOR LILIUM CANDIDUM.

I shall appreciate it if you will advise me as to the merits of home-grown Lilium candidum over the imported stock. Last year I got some home-grown bulbs which did well, but this year I am unable to secure anything but the French stock, which I fancy will not reach here in time for the lilies to make the necessary fall growth. Is not nearly all the foreign stock diseased and would there be any possibility of my getting flowers next season from French-grown bulbs? The planting is to be made in the open ground. H. H. G.

A few years ago I tried some home-grown bulbs of Lilium candidum grown in sandy ground on Cape Cod, Mass. These did well, both forced and grown outdoors. I have been unable to procure any satisfactory home-grown bulbs of late years, but have always had excellent success with candidums grown in the north of France. It is now fifteen years since I have seen any trace of disease on stock grown under glass, although on several occasions it has appeared in a more or less virulent form on outdoor plants.

The French bulbs usually arrive about the first week in September and we can always depend on getting first-class spikes the following season. It is impossible to grow as fine Lilium candidum outdoors as in pots in America. Under glass it is no unusual thing to have bulbs throw two and occasionally three spikes, sometimes with ten to sixteen flowers each, while outdoors the bulbs rarely produce more than a single spike with eight to ten flowers, occasionally more, but more frequently less.

There is ample time for Lilium candidum to make and complete its growth if planted before the middle of September. I prefer to plant the bulbs four inches deep, placing sand above and over them. I would suggest dipping the bulbs in flowers of sulphur before planting outside. This has been found to help ward off the disease in Europe and I have tried it here with satisfactory results.

There are two brands of Lilium candidum imported from Europe. The north-of-France stock makes medium sized, round, solid bulbs, with thick scales. Those grown in the south of France, Turkey, etc., have large, flat bulbs, with thinner scales. These latter carry spikes averaging only three to five flowers. The foliage is much narrower than is produced on the north-of-France bulbs. A great many of the latter are sold each season and people planting them are naturally disgusted with Lilium candidum and vow it is of no value, whereas if the broad leaved, round bulbed variety is planted, no other lily can compare with it in beauty, no matter whether pot-grown for Easter decorations or in the open ground. W. N. C.

TRANSPLANTING ASPARAGUS.

We have a bed of 500 two or three-year-old Asparagus plumosus, which we wish to transplant to a warmer house. The plants now have good sprays. We wish to know whether they are likely to be injured much by transplanting. We have kept them on the dry side for about two weeks.

Store of Rocklin & Lehman, Sioux City, Iowa.

yet, in the strictest sense, he who copies is no designer. After getting the scheme of the lines which a plant or a branch and foliage make, he may follow it exactly, but if he has individuality he will extend some of the lines, shorten others, leave out some, change the curves on some, add some lines, but all will conform to the original grouping.

To illustrate: He may need a new design scheme for a rose spray, and, as he looks about in the garden, a small shrub with long, slender branches appeals to him as a graceful suggestion. It may be a shrub of not over three feet in height, with as many as seven branches, and all told it may be no larger than an ordinary casket spray. If he is a blundering designer he will try to make seven branches to his spray, all headed the same way, and he and everybody else will be dissatisfied with the result. He will probably go back to some old scheme which he has used before. But, on the other hand, if he is a clever designer he will remember that the bush has an all-round space in which to spread itself, but that his spray has only a flat surface on which to disport itself. He will then sensibly cut out about one-half of the branches and shorten another, and his product will be a loose spray with two or three tips of uneven length, well separated, and it will be fresh and attractive.

Where Taste Enters.

Where to draw the line, what to adopt and how much to reject, is where some halting opinion may cause trouble. But just at this point, Taste enters and in her luminous presence things appear as they should be. Taste may be cultivated, but a germ of the blind instinct must be inborn in the designer. To illustrate by other examples: A clover head as a design is beautiful of itself, but when we come to transplant it bodily into a design plan, there is another puzzler. If one attempts to construct a hand bouquet like a clover head he will carry out a ridiculous extreme, but if he singles out the outline of a single floweret from the clover head and makes a spray of small flowers after its pattern, he will have a piece of most dainty design.

Again, make an outline of an oak leaf and use it as above for an aster or mum spray. Add a few oak leaves with the flowers, to complete the uniformity of the design.

Simplify, then; take a fractional part of a natural form as a starter for a design. Because a pine cone is a natural form is no reason why it should become the ideal for a bride's bouquet, but it is a suggestive idea for a drop decorative feature in a festoon or other wall decoration.

The Intricate Design.

Intricate forms should seldom be adopted bodily. The question sometimes occurs, "Can a decorative piece be too elaborate if the designing is correct?" When you examine some of the details of the carving on a few of the famous buildings of the old world and hear their praises sung by the best critics of all ages, you are tempted to cultivate an appetite for complicated design. But most flowers are complicated designs, to begin with, and except in cases where the space is large and the view clear for a long distance, the complicated designing had better be ruled out. A warrant for elaborate designing is found, however, in the complicated series of color markings of many flowers.

Many people object to massing flowers and solid funeral pieces, as being unnatural. Most emphatically, it is not unnatural. It is quite natural and one can easily see examples of it everywhere. Trees are clustered together in groves. Flowers belonging to the composite order are fairly packed together, as in the clover, sunflower and corn flower. Massive work can be made beautiful if properly decorated, but a designer should not allow himself to follow this style to the neglect of others.

Freedom and Its Limits.

The fact of the existence of untrue corresponding sides of leaves and plants encourages freedom in designing and trimming. However, there must be found in every floral design a certain balance and poise, even although it may not be evident at first glance. But where a prominent feature bends out to one side, a corresponding part should project somehow in the opposite direction. The fulcrum should be at the center of the piece, and the tips of the opposite points should be somewhere near equal distances from the center.

The principal difficulty, then, is adapting the correct design to the occasion. No rule for this can be found except that rare gift, common sense, guided by at least a glimmer of natural taste.

Gertrude Blair.

NOTICE

Certain florists of this city in soliciting orders for flowers for funerals are so lost in their zeal to obtain business as to fail to appreciate the amenities due the grief-stricken, and inconsiderately intrude themselves or their grasping representatives on families suffering from the shock incident to the loss of those near and dear to them. These ghouls of the business are frequently rebuked by the indignant mourners and friends of the deceased, but their actions sometimes tend to create a false impression of the methods employed in the flower business, and those of us who conduct our efforts along legitimate lines are often unjustifiably criticised. We appreciate that flowers as a gift are usually the best external evidence that persons have of showing their sentiments towards the departed and their family, but we most emphatically disapprove of the tactics employed by the inconsiderate element referred to. Their importunities have grown akin to a common nuisance, and my purpose in writing this letter in behalf of my fellow-florists is to ask the public to aid the reputable dealers in our efforts to correct the abuses by giving short shrift to these objectionable solicitors. Yours truly,

Thos. F. Galvin.

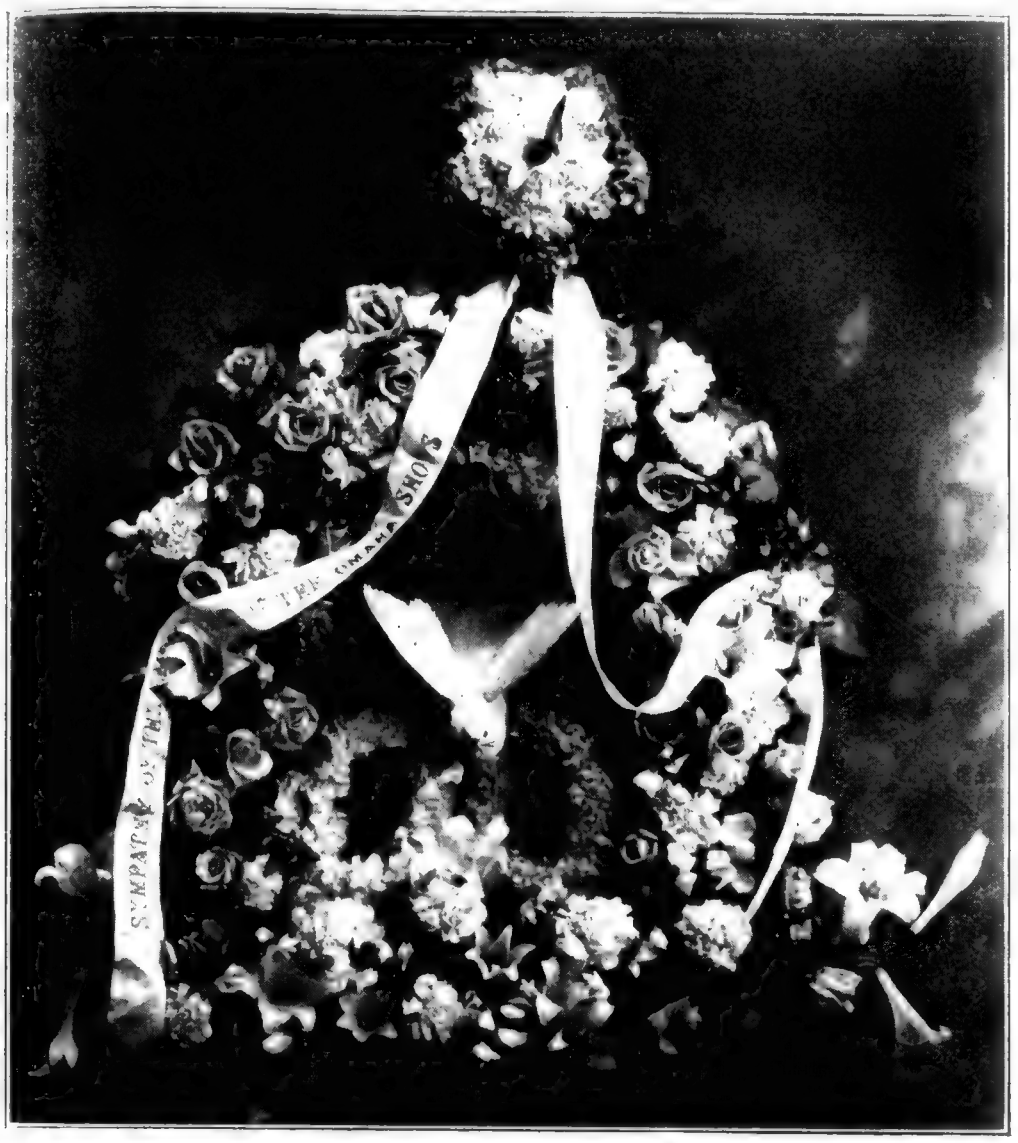
Newspaper Advertisement Against Crepe Chasers.

GALVIN ON CREPE CHASING.

The Thomas F. Galvin corporation at Boston purposes to discourage the practice designated as crepe chasing. In an open letter, published as an advertisement in the Boston dailies, Mr. Gal[vin] says the practice has grown until [the] importunities of the solicitors have [be]come akin to a common nuisance. He [be]lieves that the light of publicity let in [on] the practice will serve to correct [the] abuse and at the same time will reli[ve] the better grade of florists from [the] stigma which attaches to all florists [be]cause of the despicable methods pr[ac]ticed by those on the fringe of the tra[de]; no florist deserving of the name obtru[des] himself upon any family in time [of] death; he must wait until he is called.

THE SIOUX CITY GATES.

The gates ajar shown in the acc[om]panying illustration was made at [the] store of Rocklin & Lehman at Sioux C[ity] for the recent funeral of a railroa[d] and one of the florists' hardest probl[ems] was how to dispose of the inscript[ion] which was demanded. The commit[tee] that collected the money for the desi[gn] insisted upon the inscription: "Sy[m]pathy of the employees of the Oma[ha] shops," which is a whole lot to put [on] any floral piece. Rocklin & Lehman [ac]complished the task by using gold l[et]ters on a long streamer of ribbon, [as] shown in the picture. The conventional gates design was varied by adding a st[ar] at the top and by perching a dove on [one] of the gates. The flowers used includ[ed] roses, carnations, sweet peas and lili[es], the piece measuring five feet from ba[se] to star.



July 22 Michael Rocklin bought [out] the interest of his partner, Julius L[eh]man, and will continue the business in[di]vidually, but will retain the firm na[me] without change. The second illustrati[on] shows the store front as it appeared [one] day last week. The habitues of [the] Chicago market will recognize Mr. Roc[k]lin. He was for fourteen years with C. H. Hunt and for two years with Bass[ett] & Washburn before going to Sioux City about a year ago to engage in busine[ss] for himself.

ASTER DISEASE.

We are sending a diseased aster pla[nt]. Please state what the disease is and [its] cause and cure, if possible. Since [we] have sent the entire plant it is har[dly] necessary to make any remark as to [the] effect of the disease upon the plant, es[pe]cially as we take it that this is probab[ly] a common disease of this flower. As y[ou] see, it absolutely destroys the flower a[nd] after it takes hold upon them, does aw[ay] with all chances for flowers. C. A. D.

There are three principal diseases [of] asters. First, root lice of a bluish co[lor] attack the roots and cause the plants [to] wilt and die; second, stem-rot, shown [by] the wilting and final dying down [of] affected plants, the stems appearing [of] a dark color just above the surface [of] the ground; third, the yellow disease, which latter appears to be the trou[ble] you have. For any of these diseases it is doubtful if there is any real remedy once the disease has appeared, nor is it known with any certainty what causes either the stem-rot or yellow disease.

The last named trouble causes [the] plants to have a somewhat stunted and abnormal appearance. Any flowers formed usually are of a sickly yellow color and come malformed. Occasional plants will be found affected in this way all over a bed and in practically every kind of soil. Investigations at the agricultural experiment stations of quite

Gates Ajar by Rocklin & Lehman, Sioux City, Iowa.

TRANSPLANTING ASPARAGUS.

We have a bed of 500 two or three-year-old Asparagus plumosus, which we wish to transplant to a warmer house. The plants now have good sprays. We wish to know whether they are likely to be injured much by transplanting. We have kept them on the dry side for about two weeks.

Store of Rocklin & Lehman, Sioux City, Iowa.

Would it be necessary to take much soil with them, or could we give them new soil? We would like to use old carnation soil from bench, which has been used the previous year, with one-half pasture sod loam. Would it not be well to leave out manure, and feed when they begin to show growth? We would be pleased to have you give us full particulars as to the best way to proceed.

H. F. C.

The asparagus in question may readily be transplanted from one house to the other if the plants are carefully lifted with a moderate sized ball of earth. If they have been kept on the dry side for a time previous to the transplanting it is better for them.

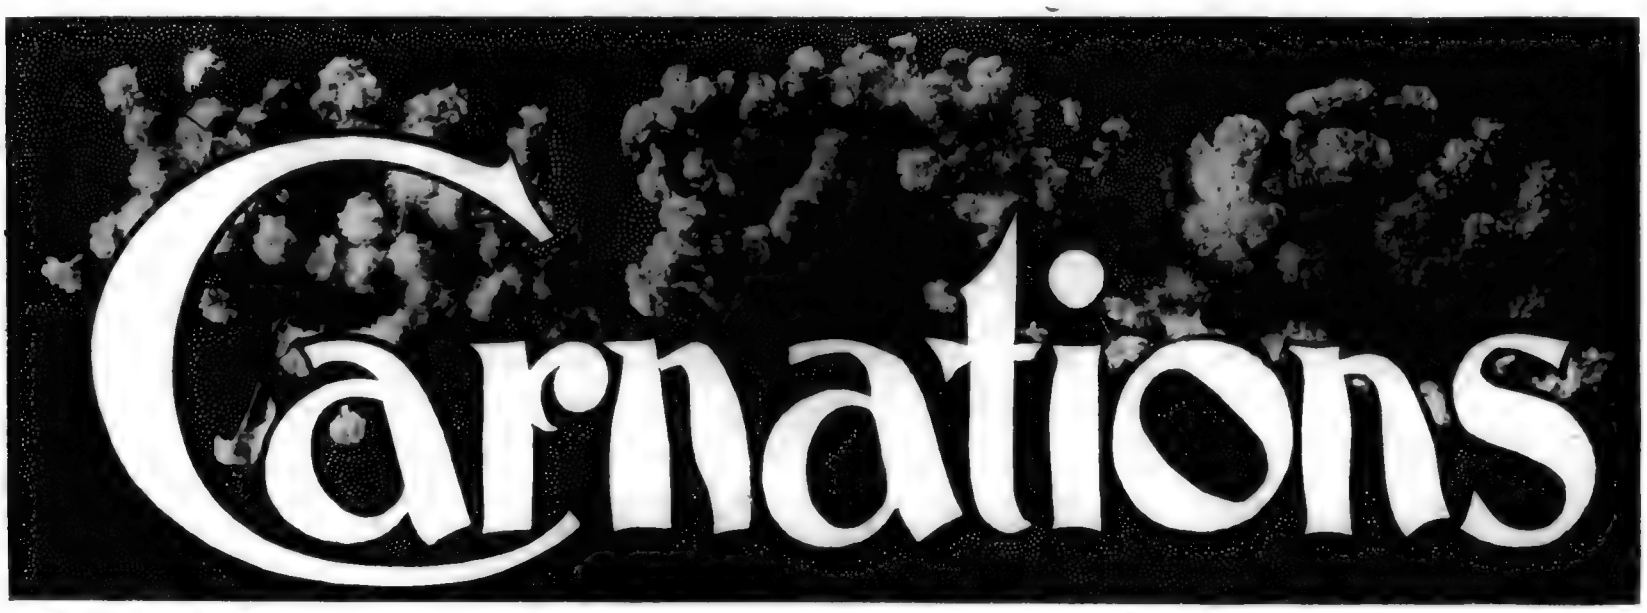
The old carnation soil with one-half of new soil added will be none too rich for these plants, and it would be well to add about one-fourth part of well-rotted stable manure to the compost, for asparagus is a gross feeder.

Shade the house moderately, in which the new planting is made, and spray the plants frequently in bright weather, but do not get the soil sodden before the plants begin to root afresh. In a short time they should become reëstablished.

W. H. T.

BOUGAINVILLEAS.

Of late years I have always grown bougainvilleas for Easter, but I now wish to grow them for Christmas. Can you give me any information regarding these plants—what temperature to start them at, etc.? Will it be necessary to rest them before bringing them into the houses? What is the best variety for early forcing? I have always grown B. glabra Sanderiana. E. K.



Bougainvillea Sanderiana is the most suitable variety for forcing. For Christmas flowering it is necessary to have the growths on your plants thoroughly ripened early in September. The plants will now require an abundant water supply to enable them to complete their growth, and should be kept under glass all the time. Give them a thin shading only. To secure well ripened wood early, gradually withhold water, but not suddenly, or you will probably ruin the plants.

Potting should be done just after flowering in the case of plants to be carried over. Shake away as much as possible of the old soil and prune roots and shoots at the same time. The plants ought to be kept tolerably dry for a few days before potting.

If your wood is firm and well ripened early in September, the bulk of such plants will come in flower for Christmas. All foliage should have fallen from the shoots, which should be hard and nutty. In starting the plants, do not run them too warm at first; 60 degrees at night is easily maintained in September and is sufficiently high for them. Use water sparingly at the root, but syringe freely until the plants break into active growth, when the water supply must be increased. A rather airier atmosphere can be given them when well started. Avoid a heavily shaded house. Bougainvilleas want little shade at any time, although when in bloom it helps to hold their color. Get the plants as well advanced as you can before the last part of October, as the declining solar heat at this season is different from that preceding Easter.

Use liquid manure when the bracts are showing, discontinuing it when the flowers show color. Endeavor to get the plants in a cool house a few days before Christmas. An average night temperature of 60 degrees during the forcing period is, as a rule, sufficient.

C. W.

GREAT EXPECTATIONS.

One of the most interesting diversions for the florist is the attempt to produce new varieties by cross-fertilization; and the ever present possibility that the result may be so valuable as to realize a fortune for the hybridist adds zest to the operation.

The plant upon which inter-pollination is most frequently attempted is probably the carnation, owing, no doubt, to its almost universal cultivation and the demand for newer shades of color, better habits of growth, more profitable kinds and greater size of flower.

Many florists who are still in the harness will remember the time when Edwardsii, Degraw, La Purite and a few other small-flowered sorts made up the stock in cultivation and when a carnation flower three or four inches in diameter seemed impossible of attainment.

It is wonderful what a diversity there may be in plants produced from seed obtained from the same pod. Some may have flowers that are almost single, while others have so many petals that the calyx cannot contain them; and the colors may vary from pure white through different shades of pink, variegated, yellow and red to darkest crimson.

Most of the seedlings will be totally valueless, but when a variety is obtained the stock of which can be sold for $10,000, it pays well for much experimenting.

W. T. Bell.

CARNATION NOTES.—EAST.

Housing the Plants.

Previous to the lifting of any plants, it is important to see that everything is in readiness in the houses for their reception. It is probable that the bench soil is somewhat dry. This should be watered lightly in the afternoon of the day before setting with plants, thus allowing time for the soil to become evenly moist throughout. A convenient-sized box in which to stand the plants, as lifted, is about 18x30 inches and ten or twelve inches deep, with a layer of damp moss on the bottom. This can be carried from the field directly to the planters, thereby saving unnecessary handling. It is obvious that a sufficient number should be provided to keep things moving.

The number of plants, in each variety, that are to be housed should be decided upon and space assigned.

Lifting the Plants.

It is immaterial whether long-handled spades or spading forks are used to lift the plants, and, although we prefer the latter, we do not think it requires a man on each side, each with a fork, to lift a plant properly. It is desirable, of course, that the main part of the root system be secured, but we cannot expect to get the whole. The object should be to secure the principal part without injury, rather than a large quantity of delicate roots which would be cumbersome to handle, and one man, by intelligent use of spade or fork, ought to accomplish this successfully.

As fast as one man lifts, another should remove what soil will easily come away from the roots and place the plants upright in the box containing the layer of damp moss.

Removal of Soil From Roots.

The question of removing the soil from the roots has been much discussed in times past, but since the practice has been to pot young stock as it comes from the sand, the general opinion seems to favor the soil's removal. My experience has been that it is best to leave as little as possible of the field soil on the roots.

Then, when set in fresh and richer soil than where grown, the plant takes on renewed vigor. This practice also somewhat reduces the possibility of transmitting fungous disease germs from field to house.

This treatment calls for prompt benching of the plants, but this is as it should be. Let there be no delay in getting the exposed roots into soil, but do not try to see how rapidly it can be done. There is a vast difference in the reëstablishment and subsequent behavior of stock that is well planted, as compared with stock that is handled in a slipshod manner. I would be the last to discourage rapid work, but must insist on its being done thoroughly. After a little practice one may set plants both properly and rapidly, the whole secret being in starting right.

How to Set a Plant.

With the right hand remove a handful or two of soil at the point desired; then, with thumb and fingers extended but the hand partially closed, make the outer edge of the hole deeper, leaving the center to form a small mound a trifle higher than the surface soil. The left hand meanwhile has grasped a plant by its trunk or neck. Withdrawing the right hand from the soil, slightly part the roots and place them on the mound, allowing the roots to radiate naturally in all directions. Still holding the plant with the left hand, throw a little soil over the roots with the right and raise the plant a trifle to distribute the soil among the roots. Draw in the remaining loose soil and with both hands firm the soil about the plant, leaving a shallow depression in which to water.

The operation is extremely simple, consuming but a fraction of the time required to explain it. The one precaution to be taken is that the hole in which the plant is to be set should be made quite large, to prevent any possibility of cramping or doubling up of roots.

When fifty plants have been set they should be watered, and if the bench soil is of the proper degree of moisture, one-half pint of water in the depression provided will be sufficient for the first time. Subsequent treatment consists in keeping the house free from strong draughts and occasionally spraying the foliage. This will receive attention in a later article.

GEO. S. OSBORN.

CARNATION NOTES.—WEST.

Soil for the Benches.

By this time you may have the new soil in your carnation benches. If you have not, then get busy. The day of housing carnations in September is long past. You cannot afford to plant so late as that and expect to compete with the grower who plants in July and early August. If the work is going on, or has not begun, a few hints will not be amiss.

Be sure the soil is in good condition to be handled. If it is too wet do not touch it, but lay some hotbed sash over it. A few days will dry it enough to handle. Break up all the lumps when handling it, and be sure the soil and manure are well mixed.

When taking it in, be sure to spread it evenly over the benches at once. If allowed to remain long in heaps it will dry out in places, and when you do spread it there will be dry spots all through the bench—a condition which is hard to rectify, and which, unless it is rectified before planting time, will give you much trouble.

Great Expectations.

In spreading the soil, be careful to get it of a uniform depth all over, for the sake of uniform results. Be careful along the edges of the beds and the corners to see that they are filled up. It is not necessary to tramp it with your feet, as is sometimes done. Just see that there are no lumps and hollow places along there.

We use a thin layer of rotted stable manure on the bottom, before filling in the soil. This is not essential, by any means, but we consider it desirable. The roots do not strike it until the plants are reëstablished, and they seem to like it then.

The Use of Bone Meal.

We are this year cutting out all the bone meal at planting time. Last year we left a considerable space, about 150 square feet, on each of several beds, without bone. These spaces were left in the middle of the beds, one variety only being planted on a bed. No one could find those spaces at any time during the whole season, except by the marker. We may experiment a little further the coming season, however, before we finally eliminate the bone altogether. Some other first-class growers report the same experience as ours.

That ground bone is a valuable fertilizer I would not deny for a moment, but that it is better for some crops than for others must be admitted; also that under certain conditions it is better than under other conditions. So we are interested now in finding out how good or how bad it is for carnations, and under what conditions. One prominent grower stated positively that since he quit using bone, stem-rot has practically disappeared, whereas, formerly, while using bone, there was considerable trouble from that source. Another asserts that bone meal will cause, or at least aggravate, bursting in winter. Both of these are at variance with our experience, as we could see absolutely no difference whatever last winter.

If it can be proven beyond any doubt that bone meal is of no value whatever in growing carnations, there will be a saving of thousands of dollars each year to the carnation growers of the country.

About shading I have given my views so often that I will not repeat them at length here. We put on a fair shade before we begin changing the soil, and this is allowed to remain until after the plants are housed; that is, as much as

Would it be necessary to take much soil with them, or could we give them new soil? We would like to use old carnation soil from benches, which has been used the previous year with one-half pasture sod each. Would it not be well to leave out nitrate soda when they begin to show growth? We would be pleased to have you give us full particulars as to the best way to proceed.

H. F. C.

The asparagus in question may readily be transplanted from one house to the other if the plants are carefully lifted with a moderate sized ball of earth. If they have been kept in the dry state for a time previous to the transplanting it is better for them.

The old carnation soil with one-half of new sod added will be none too rich for these plants, and it would be well to add about one-fourth part of well-rotted stable manure to the compost for asparagus is a gross feeder.

Shade the house moderately on which the new planting is made, and spray the plants frequently in bright weather, but do not get the soil sodden before the plants begin to root afresh. In a short time they should become reestablished.

W. H. T.

BOUGAINVILLEAS.

Of late years I have always grown bougainvilleas for Easter, but I now wish to grow them for Christmas. Can you give me any information regarding these plants, what temperature to start them at, etc.? Will it be necessary to rest them before bringing them into the houses? What is the best variety for early forcing? I have always grown B. glabra Sanderiana. E. K.

Bougainvillea Sanderiana is the most suitable variety for forcing. For Christmas flowering it is necessary to have the growths on your plants thoroughly ripened early in September. The plants will now require an abundant water supply to enable them to complete their growth, and should be kept under glass all the time. Give them a thin shading only. To secure well ripened wood early, gradually withhold water, but not suddenly, or you will probably ruin the plants.

Potting should be done just after flowering in the case of plants to be carried over. Shake away as much as possible of the old soil and prune roots and shoots at the same time. The plants ought to be kept tolerably dry for a few days before potting.

If your wood is firm and well ripened early in September, the bulk of your plants will come in flower for Christmas. All foliage should have fallen from the shoots, which should be hard and ripe. In starting the plants, do not run them too warm at first; 60 degrees at night easily maintained in September and a sufficiency high for them. Use water sparingly at the root, but syringe freely until the plants break into active growth, when the water supply must be increased. A rather airier atmosphere may be given them when well started. Avoid a heavily shaded house. Bougainvilleas want little shade at any time, although when in bloom it helps to hold the color. Get the plants as well advanced as you can before the last part of October, as the declining solar heat at that season is different from that preceding Easter.

Use liquid manure when the bracts are showing, discontinuing it when the flowers show color. Endeavor to get the plants in a cool house a few days before Christmas. An average night temperature of 60 degrees during the flowering period is, as a rule, sufficient.

C. W.

GREAT EXPECTATIONS.

One of the most interesting diversions for the florist is the attempt to produce new varieties by cross-fertilization; and there is at present possibility that the result may be so valuable as to realize a fortune for the successful one adds zest to

The place upon which carnation cultivation is most frequently attempted is probably the country, owing to the fact that its almost universal cultivation and the demand for newer shades of color, better habits of growth, more profitable kinds, etc., create a constant interest in the subject.

Many florists became interested in the carnation in September, 1904, when Enchantress, Dorothy Gordon, Lady Bountiful, Lawson, Alice and others were introduced. Each of these varieties was an improvement on the old sorts, and the interest aroused was intense. Many of the growers who had been in the business for years, and who had seen the introduction of many varieties, declared that the new ones were the best they had ever seen.

It is a fact that carnations sometimes vary in their seedlings. Some may have the ray that are almost single, while others have seven rays. It is thought that the calyx may also vary in shape, and that different colors may appear in the flowers. Although different shades of pink, variegation, yellow and red are the darkest crimson.

Most of the seedlings will be totally valueless, but when a variety is obtained the stock of which can be sold for $10,000, it pays well for much experimenting.

CARNATION NOTES.—EAST.

Housing the Plants.

Previous to the lifting of any plants it is important to see that everything is in readiness in the houses for their reception. It is probable that the entire soil is somewhat dry. This should be placed lightly in the benches, or it may before setting with plants, so as having time for the soil to become evenly moist throughout. A supply of sized box in which to stand the plants is lifted, as about 18x30 inches are best, or twelve inches deep, with a layer of damp moss on the bottom. This can be carried from the field directly to the benches, thereby saving unnecessary handling. It is obvious that a sufficient number should be provided to keep things moving.

The number of plants to each box that are to be housed should be

spot and space assigned

Lifting the Plants.

It is immaterial whether long handled spades or spading forks are used to lift the plants, and, although we prefer the latter, we do not think it requires a man on each side, each with a fork, to lift a plant properly. It is desirable, of course, that the main part of the root system be secured, but we cannot expect to get the whole. The object should be to secure the principal part without any, rather than a large quantity. Inferior roots which would be crumbled some by each and one man, by using a sheet iron spade or fork, might accomplish this successfully.

As fast as one plant lifts another should be ready to receive it. Soil will easily come away from the roots and place the plant in the box containing the layer of damp moss.

Removal of Soil From Roots.

The question of removing the soil from the roots has been much discussed in times past, but since the practice has been to get young stock as it comes from the sand the general opinion seems to favor the soil's removal. My experience has been that it is best to leave as little as possible of the field soil on the roots

when set in fresh and richer soil where grown, the plant takes on ed vigor. This practice also some reduces the possibility of transmit fungous disease germs from field to

...s treatment calls for prompt ...ng of the plants, but this is as it ...d be. Great Expectations.

rectified before planting time, will give you much trouble.

In spreading the soil, be careful to get it of a uniform depth all over, for the sake of uniform results. Be careful along the edges of the beds and the corners to see that they are filled up. It is not necessary to tramp it with your feet, as is sometimes done. Just see that there are no lumps and hollow places along there.

We use a thin layer of rotted stable manure on the bottom, before filling in the soil. This is not essential, by any means, but we consider it desirable. The roots do not strike out until the plants are reëstablished, and then seem to like them.

The Use of Bone Meal.

We are this year cutting out all the bone meal in planting trees. Last year we left a considerable space, about 150 square feet, on each of several beds, without bone. These spaces were left in the middle of the beds, one variety not being planted on a bed. No one could find these spaces at any time during the whole season, except by the marker. We may experiment a little further the coming season, however, before we really eliminate the bone altogether. Some other first class growers report the same experience as ours.

That ground bone is a valuable fertilizer I would not deny for a moment, but that it is better for some crops than for others must be admitted; also that at for certain conditions it is better than under other conditions. So we are interested now in finding out how good or how bad it is for carnations, and under what conditions. One prominent grower stated recently that since he quit using bone steamed meal has practically disappeared, formerly, while using bone, there was considerable trouble from that source. Another asserts that bone meal is worse, or at least aggravates, [illegible] ...ter. Both of these are ... and we expect ... so absolutely no difference ...

is not washed off by rain. We have discontinued the heavy shading formerly practiced at housing time. We find that if the plants are in good condition they will reëstablish themselves more quickly under only a moderate shade. Frequent light syringing is required for a few days, to prevent shriveling, but the growth starts strongly from the beginning.

A. F. J. Baur.

CARE OF THE YOUNG STOCK.

Stirring the Soil.

Now that planting is practically finished, the care of the young stock should be the most important work for some time to come. During the growing season the care and attention bestowed on the young stock means, in a great measure, the success or failure of the entire season.

Of the utmost importance to the young plants is the regularity and thoroughness of cultivating. This is a part of the work which cannot be neglected, not only for the elimination of weeds, but also that the surface of the soil may be kept in the proper condition to absorb light and heat and that evaporation may be perfect.

When the surface of the soil is allowed to cake, it is in the worst condition possible to perform these most essential functions, and hence the necessity of frequent stirring. The liberal use of water demanded at this season and the rapidity of evaporation will soon put the surface of the soil in a caky condition.

Insect and Fungous Pests.

Next in importance is to keep the young plants clear of insect and fungous pests.

Among our worst enemies at this season we may place red spider. Where there is a good pressure of water and a willing worker at the nozzle, this pest need give little trouble, for, although a prolific breeder and insidious in its attacks, it cannot withstand the effects of cold water applied with force. Greenfly will also require to be looked after, as its presence in the house is at all times undesirable. The means of destroying this enemy are many and simple, and most of them are effective if applied in time.

A sharp lookout must be kept for mildew, as this is one of the most destructive, persistent and annoying of the summer troubles. In this case, prevention should be the motto, as the most rapid and effective cures still leave the plants in a more or less debilitated condition. Prevention consists in a thorough knowledge of the laws of ventilation, with a knowledge, also, of the effect of these laws on the temperature and atmosphere of the house and the effect of these conditions of temperature and atmosphere on the germination and growth of this fungus. When this question has been thoroughly discussed and solved, mildew should no longer be a terror to the grower.

Sulphur for Mildew.

As a remedy for mildew there is as yet nothing that can compare with sulphur. During summer, when there is no firing, it is a little more difficult to release the fumes, and also not quite so easy to conserve them long enough to be of full service, as during the colder months, when the ventilators can be closed long enough to effect the purpose.

The use of the Peerless sulphur blower at this season will, if intelligently done, soon eradicate the pest and keep the plants clear of it. I have found that by using one-third finely sifted air-slaked lime to two-thirds of flowers of sulphur, the powder is more easily distributed and equally effective. This dusting should be applied at least once a week, choosing a bright day and closing the ventilators during the operation, so as to allow the powder to settle evenly. Even if the temperature approaches 100 degrees no harm will be done, if not allowed to remain too long at this notch.

Ribes.

ROSE VISCOUNTESS FOLKESTONE.

Rose Viscountess Folkestone has many admirable qualities as a garden rose in California and should be more generally planted, at least in the coast section. It is with me the freest bloomer of the hybrid tea class, the flowers are uniformly high grade, the petals of the flowers drop instead of drying on the stem and becoming unsightly, and the blooms show less injury from fogs than those of most other roses. It seems to be happy and make vigorous growth in almost any soil and location. With me it has proven to be much the most satisfactory of any of its class. It is so nearly a continuous bloomer that some catalogues class it with the monthly roses.

The illustration shows a plant of this rose in my garden, which is in the section bordering on Monterey Bay. G. L. G.

BLACK SPOT ON BEAUTIES.

[With reference to black spot on Beauties, a discussion of which was begun on page 8 of the Review of July 22, in response to O. H. A.'s inquiry, it is a pleasure to be able to supply the following additional information.]

Black spot on Beauties is a fungous disease which develops beneath the skin of the leaves. This makes it difficult to combat, as the spores have to be killed before they take root, as it were, on other leaves. A warm, damp atmosphere causes black spot to spread rapidly when once started, so the first thing to do to check it is to keep the plants a little on the dry side and give plenty of ventilation. If possible, have the spotted leaves picked from the plants, and spray thoroughly with ammoniacal solution of copper carbonate two or three times a week. Sulphur painted on the steam pipes will help keep it in check. Endeavor to get the plants growing vigorously, and they will, if care is taken with the watering, syringing and ventilation, grow out of the disease.

The best cure, after all, is prevention. Where there is a tendency to black spot, seize every opportunity to get steam around the houses at nights, at the same time keeping the ventilators open. See that there are no places where the water drips from the roof onto the plants, and

Rose Viscountess Folkestone.

Concrete Benches Built in Plant House by Geo. B. Windler, St. Louis.

that the vents are lowered for any showers that may come up in the night.

ALFRED BURTON.

The cause of black spot on Beauties is usually some check to root action, caused by overwatering, by defective drainage or by errors in growing, principally by trying to effect a too rapid growth during the first two months after planting.

It is also a recognized fact among Beauty growers that Beauties are much more susceptible to this particular disease than they were ten or fifteen years ago. In fact, this truth has been so apparent that many firms have ceased growing Beauties to some extent. In many establishments where these used to form the larger part of the crop they have been entirely eliminated.

In order to get rid of this trouble, it is necessary first to find the cause, and, if possible, to remove it.

The remedies are to give plenty of ventilation on all favorable occasions, keep the atmosphere as dry as is consistent with growth and keep red spider and other noxious insects in check. A dusting of one part air-slaked lime to two parts flowers of sulphur once a week, while it may not eradicate the disease, will to some extent prevent its spreading and sweeten the atmosphere.

During cold, damp weather it is good policy to fire up now and then, to dry the house and prevent souring.

The most commonly used remedy is the copper solution (cuprum). This should be applied at least twice a week, and should be left to remain on the foliage for twenty-four hours before syringing. A nozzle with a very fine spray should be used when applying the solution, so that every part of the foliage may be thoroughly saturated. All affected leaves should be picked off and burned, and all decaying matter removed from beneath the benches.

It requires a deal of patience and persistence to overcome this trouble when once it has gotten a hold, and usually before it is conquered it leaves the house in a more or less dilapidated condition.

RIBES.

Black spot on Beauties is, in my opinion, due to a lack of growth, combined with close atmospheric conditions. The best remedy is to pick off the worst affected leaves and get the plants growing.

WALLACE R. PIERSON.

BEAUTIES A SECOND SEASON.

Our American Beauties have been drying off for about six weeks and the soil on the bench is now hard and dry. The plants are healthy and the canes vary in length from one to six feet, some of the shorter ones coming from breaks on old canes two or three feet above the bench. Please give explicit directions for pruning and also subsequent care, to insure good blooms later. H. L. T.

It is not customary and seldom profitable to run American Beauties over a second season, and when this is done it requires the greatest skill and care to make them pay.

If these plants are on raised benches they will require but little drying off; in fact, they invariably do better without it. It is better not to prune much at one time, as by so doing the plants are denuded of much of the necessary foliage, without which it is hard to keep root action going.

If it is designed to allow these plants to remain where they are, a proportion of the smaller wood should be removed and the stronger canes should be tied down, to encourage the latent eyes near the base to break. The top soil should then be removed; that is, as much of it as can be removed without injuring the roots, and the surface should be given a dusting of air-slaked lime.

The bench should then receive a good, rich mulch, in bulk equal to the soil removed, and the whole mass should get a thorough soaking. For a week or ten days the house should be kept as cool as possible and the syringe should be applied two or three times a day during bright weather.

When the new foliage becomes abundant, pruning can be practiced, cutting out the older and harder wood to make room for the new. When root action is resumed, they will require just the same care as young stock under like conditions.

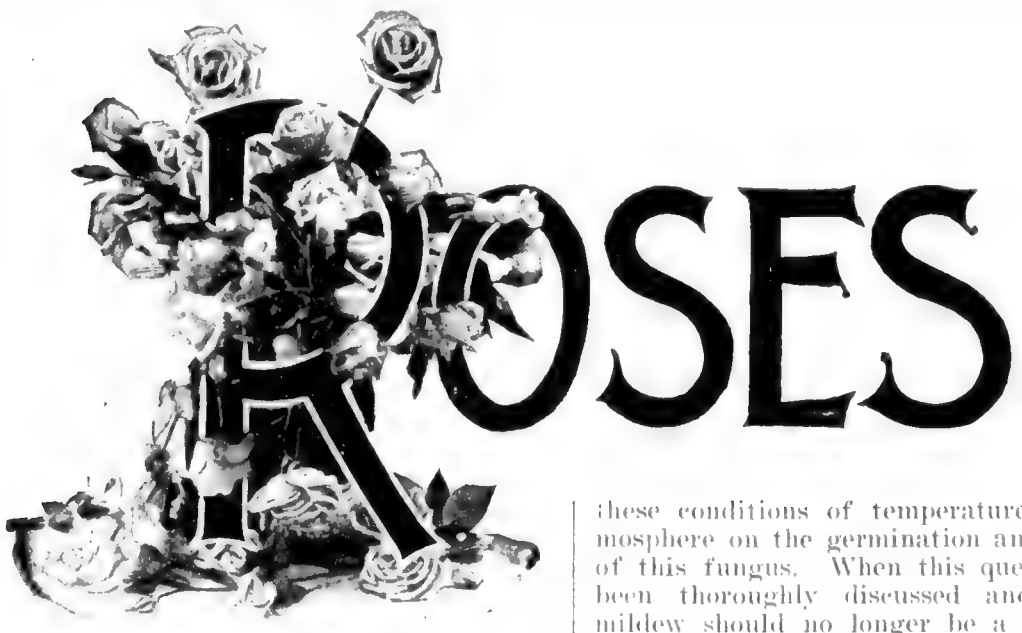
BUILDING CONCRETE BENCHES.



The Geniuses Are Busy.

Once upon a time it was the saying that the florist who did not have a fortune in sight in some pet carnation seedling was an unimaginative person, devoid of that spark to which all progress is due. Today there may be no less carnation seedlings, but the concrete bench has supplanted them as the source from which riches are expected to flow; for certain it is that the method of building benches with cement has been the subject of more study by more men, in the last two or three years, than has any other one phase of greenhouse work.

It is a comparatively simple matter to build with concrete when the bed is on the ground and retaining walls are all that are needed, but when a table is wanted it becomes another story; when legs and a bottom are to be built the question of how to build best is complicated by the problem of how to build with economy of time and material—there never is any question of ultimate economy, for any concrete bench will last indefinitely.

So keen has become the interest in concrete construction that hundreds of florists are experimenting at bench building, some making sectional benches that can be manufactured in the sheds at odd moments, to be set up when and where

is not washed off by rain. We have discontinued the heavy shading formerly practiced at housing time. We find that if the plants are in good condition they will reëstablish themselves more quickly under only a moderate shade. Frequent light syringing is required for a few days, to prevent shriveling, but the growth starts strongly from the beginning. A. F. J. Baur.

BUILDING CONCRETE BENCHES.

The Geniuses Are Busy.

Once upon a time it was the saying that the florist who did not have a fortune in sight in some pet carnation seedling was an unimaginative person, devoid of that spark to which all progress is due. Today there may be no less carnation seedlings, but the concrete bench has supplanted them as the source from which riches are expected to flow; for certain it is that the method of building benches with cement has been the subject of more study by more men, in the last two or three years, than has any other one phase of greenhouse work.

It is a comparatively simple matter to build with concrete when the bed is on the ground and retaining walls are all that are needed, but when a table is wanted it becomes another story; when legs and a bottom are to be built the question of how to build best is complicated by the problem of how to build with economy of time and material—there never is any question of ultimate economy, for any concrete bench will last indefinitely.

So keen has become the interest in concrete construction that hundreds of florists are experimenting at bench building, some making sectional benches that can be manufactured in the sheds at odd moments, to be set up when and where

wanted, and others building one-piece benches that must be constructed in their permanent location, and which involve the necessity for quick work. Which brings to mind a story:

A certain instructor was endeavoring to impart ideas to a class of boys.

"Johnny," said the teacher, "who is the greatest inventor of the age?"

Johnny scratched his head a minute before he said:

"Why, Pat. Pending, I guess; I see his name on so many different things."

There are a lot of patents pending on devices employed in building greenhouse benches. They are, indeed, so numerous the inventors find the patent office grinds them through with exasperating slowness.

Windler's Method.

George B. Windler, the St. Louis florist, has been exercising his inventive faculties on a one-piece bench. In building such a bench the mold is one of the most important features, its erection usually consuming considerably more time than does the filling in with concrete, which is the actual work of construction. Mr. Windler believes the bench legs should do more than hold up the bench, so he makes the legs first, puts a casing around them and makes them hold up the mold.

The bench legs may be of concrete, but vitrified sewer pipes make fine posts. Mr. Windler puts his casing around them, each half of the casing having a loop at the upper end, through which a crosspiece is put to hold the temporary flooring. He fastens the crosspiece by a wedge of wood. When the concrete has set, he drives out the wedge, releasing the crosspiece. When the crosspieces are drawn out the temporary flooring falls and the bench is complete.

In the accompanying illustration one side shows the mold, or temporary bench, with the concrete ready to be tamped. The strips across hold the side boards. After the concrete is tamped another board is set on the concrete parallel to the side board, and one and a half inches away. This makes a space to be filled, and to become the side of the permanent bench.

The other side of the picture shows the completed bench. The objects in it are corn cobs, inserted in the concrete when it is soft and to be pulled out to make drainage holes. Mr. Windler built this bench for pot plants; had it been for cut flowers more cobs would have been put in, that is all. At the far end of the completed bench stand two of the leg casings, and beside them are some of the crosspieces used in building the bench.

ST. LOUIS SHOW PLANS.

Because of the increasing interest in the annual flower show, scheduled for November by the St. Louis Horticultural Society, the premium lists mailed out during the last few weeks have been withdrawn and a list with more classes and better premiums is to be substituted.

Otto G. Koenig, secretary of the society, says that he has had a large number of letters from florists and fruit growers from all parts of the southwest. Instead of making the fruit exhibit a minor part of the show, it is now the plan of the society to make that part of the fall program a feature. Scores of fruit growers of note have promised to do all in their power to make the St. Louis show one of the greatest ever held in the United States. J. C. Robinson, president of the Fruit Exchange of Kansas City, is among those interested. He promised Mr. Koenig his section of the country would be represented fully.

Nymphaea Gladstoniana

SEASONABLE SUGGESTIONS

Mignonette.

The finest spikes of mignonette are always produced in the coldest winter months. In hot weather it is impossible to get any size to the flower spikes. For this reason, as an outdoor flower for cutting, mignonette is much less popular here than in Europe. An early sowing in April and another made now will, however, give fairly good spikes. A little frost does not injure it and sometimes the plants are flowering until November in the open. Well enriched ground should be given the seeds and the plants should be thinned, or the flower spikes will be small.

The first week in August is not too early to make a first sowing of mignonette under glass, where flowers are desired towards the end of October. A cold house is absolutely essential to successful mignonette culture. It must have air in abundance. While it will succeed well in raised benches, it does even better in solid beds, which, however, should be well up to the glass. Be sure that no heating pipes run under the benches, as the roots want to be cool and moist. Six inches of soil, composed of two parts turfy loam and one part decayed cow or horse manure, is about right. Where sheep manure is procurable—not the dried, pulverized article—it will be found excellent. Better avoid the use of chemical fertilizers at all times. Veteran growers have never seen much benefit from their use on mignonette, but sometimes great injury.

There are some fine special forcing strains on the market of the Allen's Defiance type. About every prominent seedsman carries an excellent strain. Sow the seeds a few together, eighteen inches apart in the rows and twelve inches between the little patches. Thin out the seedlings to three in a place and keep the ground frequently stirred among them. The first spikes which run up are customarily weak. These can be pinched back and the next lot of shoots allowed to flower. The glass will not require any shading for mignonette.

Callas.

Pots of callas, which have been lying on their sides for some time, should be overhauled as soon as time will allow. All the foliage will have dried down and the tubers can be shaken out clean, assorted in sizes and laid aside in boxes ready for potting. If it is desired to increase the stock of tubers, a number of the small offsets can be planted in boxes six inches deep. In these they will develop into strong flowering roots by another season. Many growers do not carry over their callas at all, throwing them away when done flowering, figuring that it is cheaper to buy fresh stock each season. Good home-grown tubers are, however, superior to any that can be purchased and the finest callas many of the markets see each year are those from bulbs that have been grown for a long term of years, sufficient young stock being raised each year to offset any loss in the older bulbs.

Callas can be grown in pots, boxes or benches. As a rule, the pot system is

Lily Ponds at Livingston's Farms, Just Outside of Columbus, Ohio.

the best for the small grower. In benches, owing to the greater root run, remarkably fine spathes are produced, but the advantage of the pot system is that the stock can be moved around at will, something to be considered on the average retail place. Callas are strong feeders and, in addition to a generous compost, want an abundant supply of liquid food. Use some fine bone in the soil in addition to cow manure, and always drain the pots well. Callas are semi-aquatics, but do not thrive in pots where the drainage is clogged, causing sour soil conditions.

The first half of August is a good time to pot up the roots, standing the pots outside on a bed of cinders, where they can remain until frost danger necessitates their removal indoors.

Poinsettias.

Poinsettias propagated as late as August make up into pans nicely and are less lanky than earlier rooted ones. It will probably be noted that these late cuttings root better than the first batches. Be sure to keep all rooted cuttings potted off before they become pot-bound, or they may as well be discarded. Keep the little plants either in a frame or light greenhouse close to the light.

Plants benched a few weeks ago are beginning to grow rapidly and have just been staked. It pays to stake all plants early. Those with bent and twisted shoots never do so well.

Do not allow poinsettias in small pots to become matted before giving them a shift.

Scented Geraniums.

The shoots of the scented-leaved geraniums have become quite popular in the flower markets of late years. If your customers call for these and your stock is low, get a batch of cuttings in right away and you can grow them along and make nice little plants before winter. Many growers like to carry along a few dozen plants in pots through the summer, plunging them outdoors, where they can be reached with the hose occasionally. These furnish a fine lot of shoots during the dead of winter.

Antirrhinums.

In the rush of other duties, antirrhinums are sometimes liable to be forgotten. If you have no stock in pots, it is now somewhat late to start cuttings for an early planting. If, however, you have plants outdoors which have been kept pinched and not allowed to bloom, lift and pot these. Shade for a few days and keep well syringed until established. These will make the best of stock for benching a month hence and will yield a good crop of spikes in November and December.

For late plantings to follow mums, there is still time to sow seed or root cuttings, as three months at least will elapse before space is ready for them. Do not take cuttings haphazard, but select carefully from the best plants of the most desirable colors. Mixed lots of antirrhinums are of little use in the markets, but you may be able to work them off in local trade.

PLAINWELL, MICH.—E. M. Latta, a Battle Creek florist, will locate two greenhouses here, near Hillside cemetery, and will conduct a business in both flowers and vegetables.

LIVINGSTON'S LILIES.

About a mile northwest of Columbus, O., the Livingston Seed Co. has a most interesting establishment, not far from where the picturesque Olentangy river winds its irregular course. The farm is primarily a trial ground and seed growing establishment, with considerable attention given to cut flower production and the growing of nursery stock, for the Livingstons do about everything that is to be done in this trade; but with its primary utilitarian character, the object has been to make the farm an educator of the public, for thousands pass that way. Incidentally, education leads to business, and it has been found that a well-kept establishment demonstrating the use which may be made of the various plants invariably leads to increased sales.

Approaching the farm from the south, the visitor first comes to the substantial dwelling of the superintendent, with its pleasing lawn and nearby lily pond, shown in the accompanying illustration. This was built and planted as an experiment, simply to demonstrate what can be done in the way of water gardening. It has proved an unqualified success, for there is no feature of the grounds which attracts more favorable attention. In the foreground of the picture is Nymphæa chromatella, and most of the better varieties find room in the pond. The grass-grown banks permit visitors to inspect the water lilies at close range and there are many who, as a result of a visit to the Livingston farm, are planning lily ponds for their own home grounds.

THE REVIEW will send the Book of Grafted Roses for 25 cents.

wanted, and others building one-piece benches that must be constructed in their permanent location, and which involve the necessity for quick work. Which brings to mind a story:

A certain instructor was endeavoring to impart ideas to a class of boys.

"Johnny," said the teacher, "who is the greatest inventor of the age?"

Johnny scratched his head a minute before he said:

"Why, Pat. Pending, I guess; I see his name on so many different things."

There are a lot of patents pending on devices employed in building greenhouse benches. They are, indeed, so numerous the inventors find the patent office grinds them through with exasperating slowness.

Windler's Method.

George B. Windler, the St. Louis florist, has been exercising his inventive faculties on a one-piece bench. In building such a bench the mold is one of the most important features, its erection usually consuming considerably more time than does the filling in with concrete, which is the actual work of construction. Mr. Windler believes the bench legs should do more than hold up the bench, so he makes the legs first, puts a casing around them and makes them hold up the mold.

The bench legs may be of concrete, but vitrified sewer pipes make fine posts. Mr. Windler puts his casing around them, each half of the casing having a loop at the upper end, through which a crosspiece is put to hold the temporary flooring. He fastens the crosspiece by a wedge of wood. When the concrete has set, he drives out the wedge, releasing the crosspiece. When the crosspieces are drawn out the temporary flooring falls and the bench is complete.

In the accompanying illustration one side shows the mold, or temporary bench, with the concrete ready to be tamped. The strips across hold the side boards. After the concrete is tamped another board is set on the concrete parallel to the side board, and one and a half inches away. This makes a space to be filled, and to become the side of the permanent bench.

The other side of the picture shows the completed bench. The objects in it are corn cobs, inserted in the concrete when it is soft and to be pulled out to make drainage holes. Mr. Windler built this bench for pot plants; had it been for cut flowers more cobs would have been put in, that is all. At the far end of the completed bench stand two of the leg casings, and beside them are some of the crosspieces used in building the bench.

ST. LOUIS SHOW PLANS.

Because of the increasing interest in the annual flower show, scheduled for November by the St. Louis Horticultural Society, the premium lists mailed out during the last few weeks have been withdrawn and a list with more classes and better premiums is to be substituted.

Otto G. Koenig, secretary of the ciety, says that he has had a large nu ber of letters from florists and fr growers from all parts of the sou west. Instead of making the fruit hibit a minor part of the show, it now the plan of the society to make t part of the fall program a feat Scores of fruit growers of note h promised to do all in their power make the St. Louis show one of greatest ever held in the United Sta J. C. Robinson, president of the Fr Exchange of Kansas City, is among th interested. He promised Mr. Koenig section of the country would be rep sented fully.

SEASONABLE SUGGESTIONS

Mignonette.

The finest spikes of mignonette are always produced in the coldest winter months. In hot weather it is impossible to get any size to the flower spikes. For this reason, as an outdoor flower for cutting, mignonette is much less popular here than in Europe. An early sowing in April and another made now will, however, give fairly good spikes. A little frost does not injure it and sometimes the plants are flowering until November in the open. Well enriched ground should be given the seeds and the plants should be thinned, or the flower spikes will be small.

The first week in August is not too early to make a first sowing of mignonette under glass, where flowers are desired towards the end of October. A cold house is absolutely essential to successful mignonette culture. It must have air in abundance. While it will succeed well in raised benches, it does even bet ter in solid beds, which, however, should be well up to the glass. Be sure that no heating pipes run under the benches, as the roots want to be cool and moist. Six inches of soil, composed of two parts turfy loam and one part decayed cow or horse manure, is about right. Where sheep manure is procurable—not the dried, pulverized article—it will be found excellent. Better avoid the use of chemical fertilizers at all times. Veteran growers have never seen much benefit from their use on mignonette, but sometimes great injury.

There are some fine special forcing strains on the market of the Allen's Defiance type. About every prominent seedsman carries an excellent strain. Sow the seeds a few together, eighteen inches apart in the rows and twelve inches between the little patches. Thin out the seedlings to three in a place and keep the ground frequently stirred among them. The first spikes which run up are customarily weak. These can be pinched back and the next lot of shoots allowed to flower. The glass will not require any shading for mignonette.

Callas.

Pots of callas, which have been lying on their sides for some time, should overhauled as soon as time will allo All the foliage will have dried dow and the tubers can be shaken out clea assorted in sizes and laid aside in box ready for potting. If it is desired increase the stock of tubers, a numb of the small offsets can be planted boxes six inches deep. In these they w develop into strong flowering roots another season. Many growers do carry over their callas at all, throwi them away when done flowering, figuri that it is cheaper to buy fresh sto each season. Good home-grown tube are, however, superior to any that c be purchased and the finest callas ma of the markets see each year are th from bulbs that have been grown f a long term of years, sufficient you stock being raised each year to off any loss in the older bulbs.

Callas can be grown in pots, boxes benches. As a rule, the pot system

Nymphaea Gladstoniana

Lily Ponds at Livingston's Farms, Just Outside of Columbus, Ohio.

he best for the small grower. In nches, owing to the greater root run, emarkably fine spathes are produced, ut the advantage of the pot system is hat the stock can be moved around at vill, something to be considered on the verage retail place. Callas are strong eeders and, in addition to a generous ompost, want an abundant supply of quid food. Use some fine bone in the oil in addition to cow manure, and al- ays drain the pots well. Callas are ot aquatics, but do not thrive in pots here the drainage is clogged, causing or soil conditions.

The first half of August is a good me to pot up the roots, standing the s outside on a bed of cinders, where y can remain until frost danger neces tates their removal indoors.

Poinsettias.

Poinsettias propagated as late as gust make up into pans nicely and less lanky than earlier rooted ones. ill probably be noted that these late ngs root better than the first bes. Be sure to keep all rooted ngs potted off before they become , or they may as well be discarded. the little plants either in a frame ght greenhouse close to the light.

lants benched a few weeks ago are nning to grow rapidly and have just staked. It pays to stake all plants y. Those with bent and twisted ts never do so well.

o not allow poinsettias in small pots become matted before giving them a ft.

Scented Geraniums.

The shoots of the scented-leaved gera niums have become quite popular in the flower markets of late years. If your customers call for these and your stock is low, get a batch of cuttings in right away and you can grow them along and make nice little plants before winter. Many growers like to carry along a few dozen plants in pots through the summer, plunging them outdoors, where they can be reached with the hose occasionally. These furnish a fine lot of shoots during the dead of winter.

Antirrhinums.

In the rush of other duties, antirrhinums are sometimes liable to be forgotten. If you have no stock in pots, it is now somewhat late to start cuttings for an early planting. If, however, you have plants outdoors which have been kept pinched and not allowed to bloom, lift and pot these. Shade for a few days and keep well syringed until established. These will make the best of stock for benching a month hence and will yield a good crop of spikes in November and December.

For late plantings to follow mums, there is still time to sow seed or root cuttings, as three months at least will elapse before space is ready for them. Do not take cuttings haphazard, but select carefully from the best plants of the most desirable colors. Mixed lots of antirrhinums are of little use in the markets, but you may be able to work them off in local trade.

PLAINWELL, MICH.—E. M. Latta, a Battle Creek florist, will locate two greenhouses here, near Hillside cemetery, and will conduct a business in both flowers and vegetables.

LIVINGSTON'S LILIES.

Ferns

SEASONABLE SUGGESTIONS.

Rapid growth is now being made by all ferns, whether they be in benches or pots. In the latter, careful watering is now particularly necessary, as a single drying out will cripple practically all the young fronds. As the pots are now in most cases well filled with roots, they should be assisted with weak doses of liquid manure. Sometimes earthworms are troublesome. Use lime water or one of the special worm eradicators to clear them out.

If your stock of small ferns is low, now is a good time to order a fresh supply. You will have a good demand for these later on for use in fern dishes. A few of the best ferns for this purpose are: Adiantum cuneatum, A. Croweanum, Cyrtomium falcatum, Pteris Wilsoni, P. Victoriæ, P. Cretica Mayii, P. Cretica magnifica, P. serrulata cristata, P. hastata, P. Wimsetti, Aspidium tsussimense and Davallia stricta.

In the way of new ferns no one can go far wrong in trying a few each of the handsome Nephrolepis Scholzeli and N. superbissima. Pteris Childsii is also a fern making a beautiful plant for the house or exhibition. Of course, Nephrolepis Whitmani, N. Bostoniensis, N. Scotii, Microlepia hirta cristata, Davallia Fijiensis plumosa, Polypodium aureum and Cibotium Schiedei and other good old stand-bys will all be in demand a little later. Any of these make handsome pot plants.

INSECTS IN FERN HOUSE.

We have a house that is badly infested with white fly. We have ferns in this house and were told by someone that we dare not use the cyanide of potassium, as it would kill ferns. Is this a fact or will ferns stand it as strong as other plants? J. S. & S.

An application of hydrocyanic acid would injure the ferns if used in sufficient strength to kill white fly. But it is possible that the pest in question is not the insect known as white fly, but is the male insect of the brown scale that so frequently infests ferns. This is a whitish insect with wings, and is sometimes mistaken for white fly.

In the latter case I would try fumigating several nights in succession with nicotine paper, rather than risk the hydrocyanic treatment. W. H. T.

COMPOST FOR BEDDING PLANTS.

Will you inform me if you think it safe to use sandy soil for compost to be used in growing bedding plants next spring on land where potatoes rusted last season? Would you consider a compost made last May by mixing one-third green manure (one-half horse manure and one-half cow manure) and two-thirds sandy soil, where potatoes were grown last season, a good one for growing bedding and vegetable plants?

C. A. P.

The bulk of bedding plants will do well in a rather sandy soil, provided some leaf-mold and well decomposed manure are added. The fact that potatoes rusted on the land from which the soil is taken need not trouble you. The rust is merely due to climatic and not soil conditions.

Such a compost as you prepared last May should answer well for the general run of bedding and vegetable plants. The vegetables, such as tomatoes, peppers, eggplants, lettuce, cabbage or cauliflower, want a rather richer soil than geraniums. The latter are better grown with a smaller proportion of manure in the soil, using fine bone at the last potting, which promotes floriferousness. Of course, for seed sowing you do not want any manure in the soil, unless it is old. Leaf-mold, the compost obtained from decayed leaves, is safer to use for flower seeds. C. W.

OBITUARY.

John R. Hellenthal.

John R. Hellenthal, a pioneer florist of Columbus, O., died Tuesday morning, July 27, at six o'clock, after three weeks' illness with a complication of diseases which started with appendicitis. He was not in a condition to operate on, for the physicians were afraid he would not survive the shock.

Mr. Hellenthal was born in Wasserlos, Bavaria, Germany, February 6, 1846. He came to this country with his parents in 1854. They settled in Columbus, on the south side, when that part was out in the country, and he had resided there ever since, until the city spread on all sides of his place.

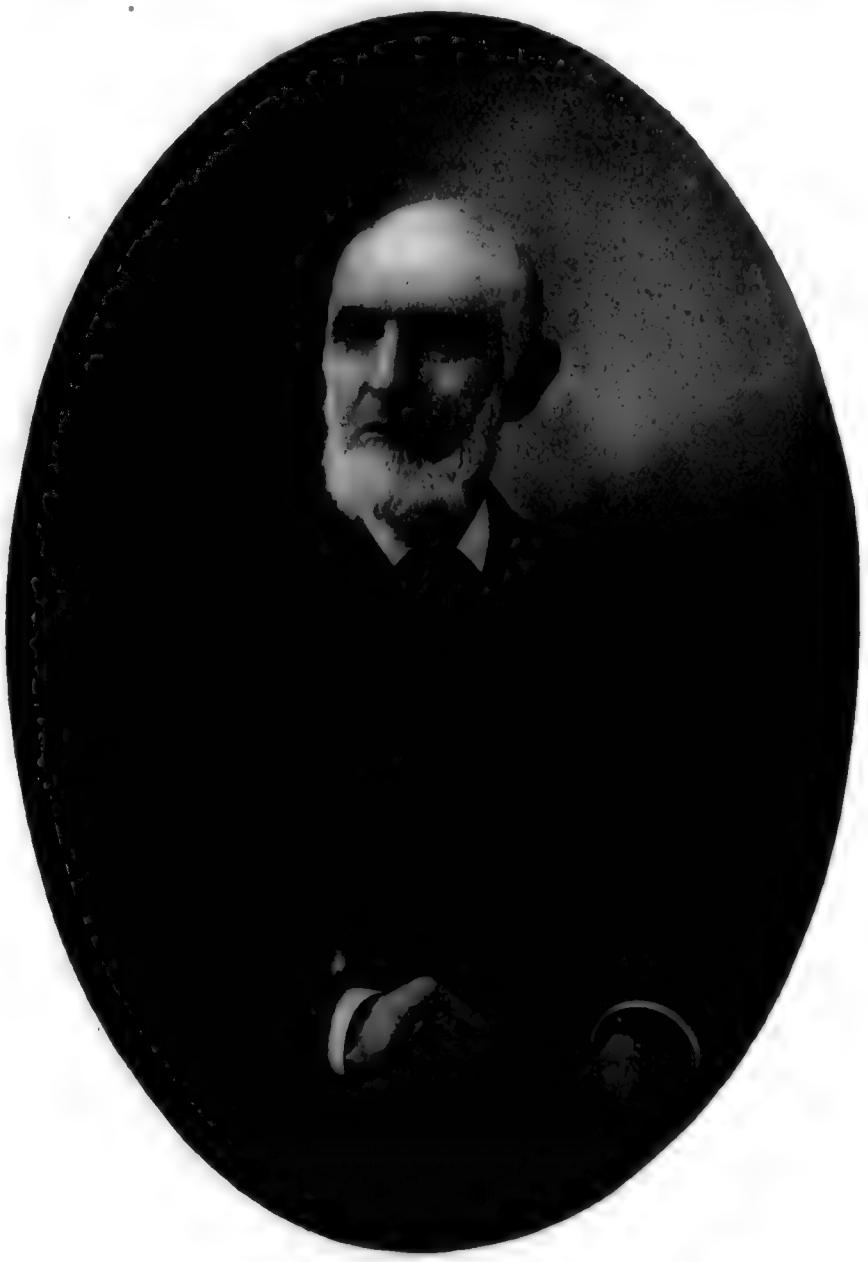
At the age of 12 years he went to work for the Columbus Nursery Co., as an apprentice, and had continued in the business steadily since that time. In 1876 he went into business for himself and had been located at the present site of the greenhouses for over thirty years.

From 1890 to 1892 Mr. Hellenthal was a member of the city council. At the time of his death he was a director in the Union Building and Loan Association, a member of the St. Paul's Young

John R. Hellenthal.

Men's Society, the Knights of St. John, Knights of Columbus, the South Side Business and Improvement Association, a charter member of the Columbus Florists' Club, and other societies. He was a great worker in all that he was connected with and the craft will miss his jovial disposition and the good word he had for everybody.

Thomas C. Thurlow.



Thomas Chase Thurlow, of West Newbury, Mass., died July 21, on the farm on which he was born, in 1832, and on which he had lived all his life, save for a year or two. The funeral was held in the same house July 23 and was largely attended, for in his more than 76 years Mr. Thurlow had gained a wide acquaintance and, unlike the prophet, was not without honor in his own home. He was a deacon of the Congregational church, which he joined sixty-four years ago. He always has been deeply interested in the welfare of the church and always has been ready to render financial aid. He gave a generous sum towards the building of the new church, which is soon to be erected. He was an ardent advocate of temperance, interested in the work of the cause, and was a member of the Massachusetts Total Abstinence Society and the New England Anti-Saloon League.

Mr. Thurlow's ancestors came from England in the early days of the settlement, locating at Newbury in 1635. His grandfather, born in 1777, was a farmer and turned his attention to fruit growing and market gardening. His father, born in 1805, also went strongly in for fruit growing. He also frequently visited the nurseries of Wilder, Breck, Hovey, Kenricks and other famous Boston men of that time. Thomas Chase Thurlow, born December 30, 1832, inherited his ancestors' love for fruits, but being of rather delicate physique, after working with his father in the nurseries for some time, taught a district school for two or three years. In 1857 he went west for a year, riding horseback in Missouri half the time, and returned east with health fully restored.

He decided to start a nursery and five acres at $50 per acre was the modest beginning his purse would permit, but he made and saved more on that area than he has since done on forty. Sugar maples and other shade trees, evergreens and deciduous shrubs were taken in hand. Living in a cold country, he quickly saw the necessity of wind breaks and screens. Norway and white spruce were mostly used. The great advantage of these hedges, which are dense, is the protection from cold winds to buildings and nurseries. Thousands of hybrid rhododendrons, azaleas and other plants of doubtful hardiness have been carried through without other protection of any sort.

Peonies for many years were a great specialty with Mr. Thurlow. A few years ago he sold his entire collection to the Chicago Carnation Co., Joliet, Ill., but again went into their culture extensively and now the nursery contains 250,000 plants in some 600 varieties. Herbaceous phlox and German iris are other specialties largely handled.

October 15, 1879, Mr. Thurlow and Mrs. Sarah Kimball Hathaway Dean were married. She survives, with four children, the three sons, George, Edward and Winthrop, being associated in business with their father, who in the last few years has left everything in their charge.

Thomas C. Thurlow.

Mr. Thurlow was a member of the American Association of Nurserymen, the American Pomological Society and the American Peony Society.

Nicholas Beierle.

Nicholas Beierle, 80 years of age, a well-known German resident of St. Matthews, Ky., died last week at his home on Breckenridge avenue, after an illness of several months. He had been in the employ of Nanz & Neuner for thirty years. The funeral took place from the late residence, July 24. There was also a service at Holy Trinity church. Burial was in St. Michael's cemetery. Mr. Beierle is survived by three daughters, Miss Mary Beierle, Mrs. Anna B. Deckel and Mrs. Hugo Schultz, and by two sons, Andrew and Joseph Beierle.

AMERICAN ROSE SOCIETY.

Secretary Benjamin Hammond has issued a preliminary list of classes and prizes for the annual exhibition of the American Rose Society, to be held in March of 1910, at the Museum of Natural History, in New York city. The list corresponds closely to those of previous years. The classes for pot plants are continued, although the response always has been disappointing. For exhibits of fifty blooms Beauty, Killarney, Richmond, White Killarney, My Maryland and Chatenay premiums of $25 and $15 are offered in each class, the same for Beauty as for Chatenay. There are classes for exhibits of twenty-five blooms of all the sorts commonly grown under glass, and for twelve blooms, competition in the latter being open only to private gardeners.

The special prizes already offered include $100 offered by Philip Breitmeyer, for best display of hardy roses in pots; the Dorrance challenge trophy, for largest display of cut blooms; $25 by Pohlmann Bros. Co., for 100 My Maryland; $25 by Poehlmann Bros. Co., for 100 White Killarney; a cup by Welch Bros., for twenty-five White Killarney; $25 by Ellwanger & Barry, for Wichuraiana in pots.

THE STOTT SPRAYER.

In the REVIEW of July 15, in speaking of the spraying of mums, Charles H. Totty states that he uses the Stott sprayer. Will you please ask him where I could procure one? I. A. P.

Since the publication, two weeks ago, of Mr. Totty's article containing his brief mention of the Stott sprayer, the REVIEW has received several inquiries of the same import as the foregoing. It is evident, therefore, that the little, incidental reference to the sprayer has created a considerable demand for it. Mr. Totty, however, says he has been informed that the manufacturers of the article are now out of business. Can any reader of the REVIEW state where the sprayer can be procured?—ED.

DETROIT, MICH.—C. L. Walker is building a greenhouse on the south side of Gratiot avenue, between Belvidere and Holcomb.

Ferns

SEASONABLE SUGGESTIONS.

RESULTS.
We give them. You get them.
We both have them.

Now is the time to sell your surplus of field grown carnation plants. Don't wait until everybody's wants are supplied before you offer your stock.

C. C. Pollworth says the flower business has come to be an all-the-year-round affair, at least in Milwaukee; something doing every day, even in midsummer.

It speaks well for the general condition of the trade that the present summer season has seen so few business failure, none of importance having thus far come to light.

SOCIETY OF AMERICAN FLORISTS.

A Word From President Valentine.

I hope each member of the society is not only planning to attend the coming convention in Cincinnati, but that he is doing his best to secure a good delegation from his vicinity. Come yourself and bring your friends, whether they belong to the society or not. After you get them there, call for help if necessary to induce them to join and we will furnish you spellbinders who will complete the work you have begun. Someone will be at Secretary Rudd's desk all the time with a welcome smile for the new member and a receipt for his money.

The Cincinnati contingent are taking great pride in the fact that their city has been selected as the place for the twenty-fifth convention and their plans show that they are bound all visitors shall have a good time. The hall for the meetings is a perfect gem of a tiny theater. Nothing could be better for the purpose, and space has been provided for the largest trade exhibit ever seen at one of our conventions.

The sports committee is wild to receive your entries. No matter whether you have a good bowling team or a poor one, get into line with it and show how game you are. Denver is going to send five bum bowlers just to show that a little matter of 3,000 miles round trip cannot keep her florists from getting into the game. Don't hold back and say it is too hot, for that is a poor excuse for a man to make, when if he stays at home he will be wheeling out soil from a house where the mercury marks 120 degrees. The Cincinnati crowd promise you several occupations more pleasant than that.

No matter how small your business, you simply cannot afford to stay away. Remember that the big fellow can go to visit good growers one by one if he prefers, but the chance for the small growers to pick up a few good points at small expense is at these conventions, and then when you get there, just look around and see how many of the big ones make money by doing the same thing.

Step to the telephone right now and ask a lot of the fellows to come downtown tonight and talk it over and see if you cannot bring a good crowd with you.

Yours for a big convention,
J. A. Valentine, President.

TO NON-MEMBERS.

To all florists who contemplate visiting Cincinnati during the convention of the Society of American Florists and who are not members of the national society notice is given that it will be absolutely necessary, upon your arrival in Cincinnati, to go to the headquarters of the Cincinnati Florists' Society, at the Sinton hotel, Fourth and Vine streets, and register. You will then receive a ticket which will admit you to the trade exhibit at Horticultural hall, where you will again register with the secretary of the Cincinnati Florists' Society, who will provide you with tickets, badges, etc., for the various entertainments.

Albert Sunderbruch, Secretary.

HOTELS IN CINCINNATI.

The following hotels are recommended by the Cincinnati Florists' Society:

Name.	Plan.	Rate per day.
*Gibson House	European	$1.50 and up
†The Sinton	European	1.50 and up
The Havlin	European	1.50 and up

Rand	European	.75 and up
Stag	European	.75 and up
Bristol	European	.50 and up
Munro	European	1.25 and up
Alms	American	3.00
Thomas	European	.50 and up

*Headquarters for the S. A. F.
†Headquarters for the Cincinnati Florists' Society.

These hotels have contributed to the entertainment fund of the Cincinnati Florists' Society.

SKUNKED.

Occasionally we hear of someone who cannot do without this or that, but I always have my misgivings as to the sincerity of such statements. To illustrate my point, permit me to encroach on your valuable time to the extent of this narrative: A Frenchman, during the heated discussions of the silver question in 1906, was brought together with an able antagonist, who argued that if the government wanted to it could do anything. "Yes," the Frenchman exclaimed, "and I could eat skunk, but I don't want to." So it is with me: I could get along without the Review, but I don't want to, so please send it right along for the next year, for which find enclosed money-order for $1.—Carl L. Roethke, Saginaw, Mich., July 24, 1909.

CHICAGO.

The Great Central Market.

On the whole, business is excellent considering that this is the last week in July. Not all the wholesale houses will subscribe to this statement, because some of them find their supplies have dwindled until they have only a mere handful of stock, not enough to permit them to do much business. In other houses the supply of summer stock is greater than it has been in previous years. In general, quality is below what it usually is in summer, but there is sufficient demand to make good business in the houses that have the stock.

Carnations continued in the dumps for a long time, but there was an improvement noted in last week's report and the present week finds carnations good property once more. The best stock coming in has been bought on sight at 2 cents and almost any sort of carnation has been salable this week at what would have been considered splendid prices only a short time ago. The change of course is due to the fact that practically all the growers are prosecuting the work of replanting their houses, and the supply is

Beauties

Largest Supply and Best Stock on the Market

For years we have made a specialty of Summer Beauties. This season our supply is greatly increased—and the quality is much **the best in the market.** Good Beauties are to be had in Chicago any hour of any day this summer, for we are in a position to supply wholesalers as well as retail buyers—but why not order direct and let us fill the rest of your order as well?

Roses Kaiserin is fine with us. Killarney and Richmond are excellent, and we have Maids and Brides that are good for this time of year. Send us your rose orders.

Peonies

Fancy pink and white. Our growers know their business, this stock is in first-class shape and sure to give satisfaction—but beware of the Peonies offered cheap at this date; it's because they are not keeping well.

ASTERS

Our shippers lead the country on Asters. Some of them have been at work for years, selecting blooms for seed, until they have worked up **SPECIAL STRAINS** of their own, far better than the ordinary seed store stock that is grown and sold in quantity. Year after year we have handled the best Asters that come into this market—and so it is again this year.

The best Asters are none too good in this unfavorable season—you simply cannot use the common stuff, grown from cheap seed by men busy with other things.

Order of us and get stock grown by specialists

Gladioli

Big supply of fancy sorts. Finest America to be found in this market; also extra good Augusta (white). Mrs. Francis King, fancy light scarlet. It don't pay to handle the common kind.

Lilies

We have a fine crop of Easter Lilies that are just the thing for hot weather work, also a nice lot of Auratums. You can order in any quantity.

Green Goods

The best Ferns in the market, $1.00 per 1000. Long heavy strings of SMILAX, Farleyense and Adiantum.

Fancy Valley Always on Hand

extremely light, so the total is relatively unimportant.

Asters are now arriving in considerable quantity, but are not up to the usual standard. Early in the season there was too much rain, then it became too dry, and various diseases and insect pests have taken an unusual toll, so the present indications are the aster growers will not have a good season. The passing of the carnation has brought a fair demand for any passable asters.

In the rose department there continues to be a good demand for Beauties, for the supply is light. Some of the largest growers are cutting little or nothing and the quality throughout is no better than it should be, but at the same time there is no more satisfactory rose at the season, and prices are rather better than usual at this date.

My Maryland and White Killarney are the best of the smaller roses and are coming in more abundantly. Quite a number of growers are cutting good Killarney, for this has heretofore been the leading summer rose. Kaiserin is not as abundant as usual and is selling well. There are few Maid or Bride, and little call for them.

Most of those who stored peonies are figuring on being pretty well cleaned up by the end of this week, but as the end of the season approaches, prices, instead of stiffening, are weakening. This is because so large a part of the stock is keeping poorly and is not coming out of storage in condition to meet the requirements of first-class trade. The stock of the one or two growers who seem to monopolize the secret of uniformly successful peony storage, say they are doing as well as in any other season and are getting regular prices for their goods.

Sweet peas are about out of the market. They have been an important factor for many months. There continue to be fair supplies of auratum lilies and enough Easter lilies to meet the requirements. Gladioli are more abundant and of fair quality. Some large orders for valley created a flurry early this week.

There is little special call for green goods and the market is quiet.

The express companies have notified the wholesalers of another increase in the

charges for returning empties, taking effect August 1. The increase also affects a great many other lines, an elaborate circular having been issued, which states the new rates as follows: "Flower baskets, boxes or crates weighing fifteen pounds or less, 10 cents; over fifteen pounds, 15 cents; refrigerator boxes, 25 cents." Just what is meant by refrigerator boxes no one seems to know; nothing of the kind is used in this market.

Train to Cincinnati.

P. J. Foley, chairman of the Florists' Club's transportation committee, announces that it has been decided to leave for Cincinnati at 2:30 Monday afternoon, August 16. The club will travel via the Monon Route from the Polk street station.

The arrangements provide for a well-stocked buffet car, a diner, a coach, parlor car and observation car, and it is intended to have the train handsomely decorated, with something doing every minute. If the plans do not miscarry, a good many people through Indiana will know the Chicago Florist's Club is traveling that day.

It is expected to pick up the Indianapolis delegation at about 6:30, and other Indiana parties will be taken on at the principal towns. It is expected that President Valentine and the Denver party will be on the train, and all florists west and northwest of Chicago are invited to make their arrangements to reach Chicago Monday morning and proceed with the Chicago party.

Club Picnic.

The annual picnic of the Florists' Club, held at Riverview Park July 22, was an unqualified success in every way except that the attendance was not so large as had been hoped. Financially it was about an even break, where with a day not so cool and windy and with a larger attendance a profit would have resulted. There were 278 paid admissions.

The big event of the day was the ball game between Wholesalers and Retailers, in which the Retailers put the kibosh on the Wholesalers to the tune of 15 to 0. The result was due to the pitching of F. Lieberman, who, the Wholesalers declare, plays ball as an occupation and runs a flower store on Ogden avenue as a recreation. At any rate, he was invincible. The teams were: Wholesalers—A. Lazaroff, cf.; J. Byers, rf.; F. Farley, lf.; F. Heidelberg, 3b.; Otto Goerisch, ss.; Joe Strauss, 2b.; W. Lorman, 1b.; R. Keefe, c.; A. Zech, p. Retailers—J. Eischen, cf.; F. Pasternick, rf.; E. Enders, lf.; W. Graff, 1b.; V. Kreitling, ss.; W. Wolf, 2b.; A. Eberling, 3b.; F. Wolff, c.; F. Lieberman, p.

But really the pie-eating contest was the big hit. Twelve young men each were given a nice, fresh, juicy blueberry pie in his hands, no plate, and there was a nice prize for the first to finish. What fell on the grass had to be gath-

The Latch String is on the Outside

The Society of American Florists and Ornamental Horticulturists will convene in Cincinnati, Agust 17 to 20 inclusive. We take this opportunity of extending an invitation to all who are in Cincinnati at that time to call at the house of Armleder, where we will be very glad to welcome you.

We shall have on display over three hundred finished wagons that you will be glad to look over and you will not be importuned to buy. We simply want you to come and get acquainted and we feel sure that we will be able to make your visit both pleasant and profitable.

Whether you are coming to Cincinnatiior not, be sure to send for our catalogue, Form I. It's FREE. You need it.

Just address **ARMLEDER, Cincinnati, O.**

ered up and consumed, even if it then had a few sticks and other things in it; nothing was exempt except what was smeared on faces and clothes, where some put more than found its way to the stomachs. The winner was the auburn-topped gentleman who picks up flower shipments for one of the express companies. L. Koropp was second.

The results in the other contests were as follows:

Race, girls under 6, G. Lochman first, S. Fr[illegible] second.
Race, boys under 6, N. Turos first, T. Yarnall second.
Race, girls under 12, M. Koropp first, K. Yarnall second.
Race, boys under 12, H. Bruns first, F. Yarnall second.
Race, girls under 16, M. Sutherland first, M. Koropp second.
Race, boys under 16, L. Koropp first, H. Bruns second.
Race, young ladies, C. Zech first, H. Young second.
Race, married ladies, F. Mullman first, A. Berney second.
Race, fat men, Wolf first, Boness second.
Race, 100 yards, open, LaBerg first, A. Eberling second.
Sack race, A. Eberling first, LaBerg second.

The outing was arranged by Ed. Enders, T. E. Waters and Frank Pasternick, the sports being in charge of Allie Zech. A. C. Kohlbrand acted as announcer. Everything was well planned and well handled on the grounds.

Among those present were C. C. Pollworth, Cincinnati; Edward Roehrs, Rutherford, N. J.; Harry Balsley, Detroit, and D. J. Murphy, Manistee, Mich.

Various Notes.

The George Wittbold Co. says that shipping trade in the plant line is keeping up better than in any previous summer, the sales in June and July having been more than double those of any other year.

It is reported that the west park board proposes to cut the wages of gardeners from $60 to $50 a month.

L. Baumann has returned from his European trip.

Adolph Malchow, at 2102 North Clark street, had an unusually busy bedding season this year, partly on account of the fact that he had the contract for some work on a new subdivision for the Northwestern Land Association. As a consequence he cleaned out all available stock and could have used more.

The A. V. Jackson business of growing mushrooms has been sold to a party named Jobson, who will continue it under the Jackson name. Archie Jackson will continue the mushroom spawn end of the business and devote all his energies to it.

Mrs. E. F. Winterson was taken ill July 22, while visiting at Highland Park. The physician said it was ptomaine poisoning. Her condition was serious for several days.

E. C. Moore has a neat store at 272 East Fifty-fifth street and finds it pays him to keep the place looking attractive, with ferns and a fair amount of cut flowers, even in the dullest summer months.

The E. Wienhoeber Co. closed July 22 and seven of its employees attended the Florists' Club's picnic. Business is quiet at Wienhoeber's now, most of the winter customers being out of town, but the season of 1908-09 was the best ever known, exceeding even 1906-07, which was an exceptionally good season.

C. M. Dickinson returned July 26 from a two weeks' outing at Pelican Lake.

E. C. Amling notes the unusually large number of big bills in circulation among the cash buyers. He says he never has seen a summer when he was called upon to change so much big money and he sees in it an indication that the city trade will be prosperous as soon as autumn opens.

Harry Rowe has been wearing his arm in a sling for several weeks as a result of an automobile collision in which he received a bad cut, severing an artery.

Sam Pearce let his men off for the Florists' Club's picnic at Riverview Park July 22, but was himself found hard at work that afternoon.

E. H. Hunt is manufacturing greening

pins, for attaching ferns to mossed designs. In three days last week they sent out fifty-one boxes, or something over half a million pins.

There is a For Rent sign in the store at 273 Dearborn street, occupied for a few weeks by the Eaton Flower Shop.

E. S. Thompson, of the Central Seed & Bulb Co., of Benton Harbor, Mich., is shipping large quantities of gladioli to Vaughn & Sperry.

John Sinner is putting in his time at the greenhouses, pushing the planting of carnations.

Miss Martha Gunterberg is spending her vacation in Minnesota.

William Nagel, formerly in the trade, lost his mother July 24. The funeral was held Monday, from the family home at 2810 West Thirty-ninth street.

L. H. Winterson attended the flower show at River Forest last week and speaks highly of it.

O. P. Bassett, C. L. Washburn and E. B. Washburn started Tuesday morning, July 27, for an automobile trip to Lake Minnetonka. They planned to go up one side of the Mississippi and down the other.

W. W. Randall has not been his usual self the last few days, the cause being a badly ulcerated tooth.

George Poehlmann having returned from his vacation, O. W. Frese is away for a fortnight.

The A. L. Randall Co. is taking inventory in the supply department this week.

Phil Schupp is spending the week-ends with the Budlong party at Lake Geneva.

F. F. Benthey notes that it took longer than usual this year for carnations to recover from the spring depression, but that they got there finally.

Peter Reinberg's cut is at the lowest of the season; only one wagon-load a day is now sent in, reaching the store at about 10 a. m.

Bassett & Washburn have a house of cold storage giganteum lilies, from which they are beginning to cut. The bulbs were started four cases a week until the house was filled, so they expect the blooming to continue through August and September.

Frank Oechslin reports business quiet at present, but is expecting and preparing for an unusually heavy demand in the fall. He is still a few days behind on work owing to the late spring, but ferns, cyclamen, peppers, etc., in great variety are in fine condition.

The presence of Edward Roehrs in town for a week or more indicates an increased supply of orchids in this market next season. He spent a couple of days at Poehlmannville.

Wietor Bros. are pushing the benching of carnations, so N. J. Wietor reports.

Ernest Farley, of C. W. McKellar's force, having returned from a fortnight's visit at his home in Indianapolis, Miss Marie Ollmert is getting her coat of tan.

Adam Heim, of Connersville, Ind., is in town with a man and a machine to put the self-tying end on the old rose stakes at J. A. Budlong's, having previously put the twist on 65,000 stakes for the Poehlmann Bros. Co.

Visitors: J. E. Meinhart, Leavenworth, Kan., on his way to Niagara Falls; Paul Stier, Bayonne, N. J.

FANCY

Gladioli

$2.50 per 100

We grow acres and acres of Gladioli for the bulbs which we use in our seed trade. We have the very choicest sorts and give them the best of care. Of course we have wagonloads of cut flowers and can supply any quantity you want, and in any color. Can cut them fresh and deliver promptly. Good express service from here.

We have the finest collection of varieties in the west. They are now in full bloom, and will continue till frost. Send along your orders and let me show you what we can do for you.

HENRY FIELD SEED CO.
SHENANDOAH, IOWA

Mention The Review when you write.

Bowling.

The bowlers are now meeting some fast local teams in anticipation of the convention contest. July 23 a team of five made these scores:

Player.	1st	2d	3d
A. Zech	174	177	17[illegible]
E. Asmus	169	149	17[illegible]
T. Yarnall	155	184	24[illegible]
V. Bergman	191	160	15[illegible]
J. Zech	166	188	15[illegible]
Totals	855	858	91[illegible]
Faetz's	859	902	90[illegible]

At the same time Pasternick and Graff rolled a little match of their own, as follows:

Player.	1st	2d	3d
Pasternick	168	152	144
Graff	121	148	120

Next Friday evening the bowlers will roll against the strong team of "Pop" Brill at Lake and Robey streets.

CINCINNATI.

The Market.

Business showed an inclination to be on the slow side during last week, and were it not for the demand that started Friday and Saturday, it would have been dull indeed. As it was, however, we have no cause for complaint. Beauties were the leaders in roses and there was a good demand for carnations, with a small supply. Asters are coming quite freely and some good stock is seen. They sell out well and at good prices. Gladioli are still coming strongly and with only a medium demand. Some fine stock is being received from southern Indiana, but $4 per hundred is about the limit price. Inferior stock sells for what one can get. Lilies continue to be good property and, in fact, all white flowers have the best call.

The green goods market is well supplied in all lines and there is a good demand right along.

The S. A. F. Convention.

Are you noticing how quickly the time is slipping by, and that before you know it August 17 will be here? Scarcely three weeks more, and three weeks go by rather quickly this time of the year. Well, the Cincinnati boys have things in pretty good shape. All of the committees are going great work. All are pulling together and, with the harmony that is everywhere in evidence, we can look forward to a successful termination to all of our plans.

We want to say now, and in such a manner that it will be impressed upon the mind of every florist in this land, that Cincinnati is extending each and every one of them a personal invitation to be with us from August 17 to 20. Whether you are a member of the S. A. F. or not, you will be equally welcome. We want you to see what a national convention is like, and when you understand all that the national society is doing and all that it intends to do, we believe that you will want to become a member of that organization. However, be that as it may, the Cincinnati Florists' Society is extending the invitation to all florists alike, and what we want is to have you with us. We will certainly try our best to see that one and all of you leave this city saying that you have had the best time ever. So don't overlook the scope of this invitation; don't let anything stand in the way of your coming. We want you and we will be disappointed if you do not come.

The preliminary program for the meetings of the S. A. F. is now out. Doubtless you have all noticed the reference to half-hour organ recitals before each meeting. This will be a decided innovation and was made possible because the meeting place, the Odeon, is supplied with a fine organ. Miss Alma R. Sterling, of the Metropolitan College of Music, this city, will preside at the organ and a better selection could hardly have been made for this important position. Miss Sterling is a native of Cincinnati, being a daughter of H. L. Sterling and a niece of Dean W. S. Sterling. She is one of the faculty of the Metropolitan College of Music. The programs which she has selected display a great deal of versatility and discretion and they will be found pleasing to all tastes, classical as well as popular. These concerts are going to be a great attraction and will be appreciated by all who are so fortunate as to be able to hear them.

The souvenir book committee expects to have the book ready for the mail by August 1. From the proofs already in hand, this book will be a beauty and a credit not only to the Cincinnati florists, but to the city of Cincinnati as well. It contains a great assortment of views about this city and gives one a good idea what to expect to see on arriving here.

The bowling and sports committee is hustling for prizes and, from the number

secured already and the number that are promised, there will be prizes for almost everybody and they are crackerjack prizes, too. The ladies will be well taken care of in this respect.

Mrs. C. H. Maynard, of Detroit, was a visitor July 25. She came down to make the final arrangements for the meetings of the Ladies' S. A. F. A meeting of the Cincinnati ladies was held in the office of L. H. Kyrk, on the afternoon of July 26. The ladies expect to hold their meetings at the Hotel Sinton, where they have secured commodious quarters and a meeting place that is second to none in this city. They are also planning to entertain themselves by attending the matinee performance at the Grand Opera House. Seats have already been secured for this purpose.

Within a few days the Florists' Society will issue a program of the various entertainments, giving full details and instructions, so that there will be no danger of any visitor missing anything.

William Murphy took a flying trip to Chicago on trade exhibit business and reports being well pleased with results. Orders are still coming in for space. There is going to be a big surprise in store for those who are so fortunate as to see this exhibit. It is going to be just a trifle larger than their wildest imagination and there will not be a thing that is used by florists in this country that will not be on exhibition.

Various Notes.

George Walker, who was superintendent and caretaker of the Jabez Elliott flower market ever since it was built, died July 25, of a complication of diseases. He was an earnest and faithful man and was known and respected by all the florists of this city, especially by those with whom he came in contact in his duties at the market. He had been ailing for some time, but continued to stick to his work till Wednesday, July 21. He was buried July 27, from the chapel at Spring Grove cemetery. His funeral was attended by a great number of the craft from this city and there was a profusion of flowers. The trustees of the market will find it a hard matter to get an equally good man to take his place. They were always able to repose the utmost confidence in him and it was never abused.

Ben Eschner, of M. Rice & Co., Philadelphia, was in town and had a fine display of supplies at the Gibson House. Among them were some fine pieces of their latest introduction, called Etruscan gold baskets, which were certainly beautiful.

Mr. and Mrs. Linfoot are off on a trip about the Great Lakes. This will be in the way of a honeymoon, as they have just been married about a month.

Julius Baer has been camping on the Ohio with his family.

George Tromey is off for an outing at Atlantic City. He will visit several of the eastern cities before his return.

Nick Weber has returned from his Michigan trip and reports its being so cold that there was not much pleasure in it, so he came home earlier than he had expected. C. J. Ohmer.

Springfield, Mass.—Foote & Jones have been awarded the contract for building the farmhouse and greenhouses on Arthur N. Cooley's place, on Crofut street.

LIMA, OHIO.

We had a heavy hail here July 15 at 7:15 p. m. In ten minutes great damage was done. Adolph Frueh lost 2,000 feet of glass, just one-third of his area. William Loesher lost about 5,000 feet, half from all his greenhouses. Hichens Bros., Cook avenue, lost 3,000 feet, and T. W. Rouragan had the same amount broken. The Swan greenhouses are nearer the city and they lost only about one-tenth of the range. E. N. Zetlitz, in the center of the city, lost only 300 feet, while Ralph Zetlitz, near Woodlawn cemetery, lost only seven lights.

From Delphos, eighteen miles from here, comes the news also of a heavy hail storm. J. H. Trentman's loss was three boxes of glass.

The storm was coming from the northwest, and so the sides exposed received the force of the storm. Plants, vegetables and fruits were all considerably damaged, even cucumbers in the houses and outside. Nobody carried any hail insurance. A. F

ASTERS

PETER REINBERG

35 Randolph Street

Chicago

DETROIT.

The Market.

Business has been what might truly be called rushing for this season of the year. There has been a steady demand for funeral work, and stock of all kinds is remarkably scarce. So far the few asters available have not relieved the situation at all. At present it looks as though asters will not be very plentiful at any time this summer. We have been having some dry weather and, adding to this disease and beetles, we have the reason why La Detroit and Kaiserin, which in other years have done so well, have so far not been up to the usual summer standard.

Lancifolium and cold storage giganteum lilies are the best flowers to be had. If it were not for these it would be a hard matter to fill all the orders which come in.

Various Notes.

What at first looked like a large fire broke out on the second floor of the building occupied by J. F. Sullivan, at 214 Woodward avenue, and the ceiling in his store suffered considerably from water. Mr. Sullivan had no insurance at the time and is therefore congratulating himself that the damage was not great.

Local florists are well pleased with tests made of the new Buckskin hose. A number of florists gave this hose a special trial, and now Kenneth Anderson is receiving large orders from these same people.

A Burroughs adding machine has just been added to the office equipment at Schroeter's, to assist Miss Wright in handling the many accounts. Mr. Schroeter now has the most up-to-date bookkeeping system to be had, and this firm's statements never fail to go out on the last day of the month. H. S.

Niessen's
News Column

The market offers very little at this season of the year worthy of special mention. You can depend on it, however, that you can get from us the best that the market affords. Below we give you a list of some of the stock of which we can furnish the best value.

BEAUTIES

Best grade...per doz., $ 3.00
Per 100..... 20.00
Other grades, $1.00, $1.50 and $2.00 per doz.

My Maryland

Per 100

Long stem..... $8.00
Mediums.....$5.00 to 6.00
Shorts ..... 3.00 to 4.00

ASTERS

Per 100

The best.....$2.50 to $3.00
Good stock 2.00
Medium grade.. 1.00 to 1.50

We can report an increased supply of Asters and a better grade of flowers. Although generally not as plentiful as other seasons, we have had an excellent supply of them, due to the fact that some of our growers have been exceptionally successful with their early crops. We can surely please you when in need of Asters.

GLADIOLI

All fancy varieties.
Per 100.....$3.00 to $5.00

Bronze Galax

Exceptionally good quality.
Per 1000.....$1.00
Per case..... 7.50

Dagger Ferns

Per 1000.....$1.00
Special price in case lots.

PHILADELPHIA.

The Rising Eastern Market.

The conditions governing the cut flower market are a trifle brighter than a week ago; there are not quite so many flowers coming into town and they average rather better in quality. The cool weather of the last week, a combination of seashore and mountains, decidedly novel in July, has had its effect on the stock, and, it may be, on the spirits of the chaps who handle the stock and who write about it. Anyway, the brighter side is uppermost today.

I note with pleasure the shipping orders are fairly plentiful for the season, that Beauties are less so, and therefore seem more desirable to buyer and seller, that white roses of quality continue to be sought after, and that My Maryland becomes more and more popular.

The fact that the after-market took a drop owing to increased shipments, chiefly of medium and low grade flowers, seems less disheartening than it would with the thermometer at 90 degrees, and we look forward confidently to the near approach of the higher grade flowers of asters. Gladioli are abundant and in fair demand at moderate prices. Easter lilies are not nearly so plentiful as a week ago; the demand created by the excess of supply is now sufficient to take the reduced production. Cattleyas are fine. Valley is fair, with steady support. Sweet peas have made their exit and reëntrance, the old crop being succeeded by the new, to the small advantage of the consumer. Outdoor flowers are rather less plentiful for the moment. Greens have been in better demand, or perhaps it would be fairer to say the demand more nearly equals the supply.

Dahlias.

William C. Herbert, managing partner of the firm of David Herbert & Son, Atco, N. J., discussing the dahlia situation a few days ago, said that he believed that the drought during the first six weeks of this summer would not seriously affect the dahlia crop now that the rains have commenced. Cultivation was systematically followed during the dry period, conserving moisture as far as was possible. When asked as to the comparative values of the root and cut flower industry, Mr. Herbert placed them at 75 and 25 per cent, respectively, of the grower's receipts. He said that the 25 per cent derived from cut flowers was of especial value to the dahlia growers because they were obliged to keep their men employed cultivating the dahlia farms during the summer, without any returns, as the sales of roots and plants ceased about June 1, not to recommence before November 1. Speaking of the returns of cut flowers, Mr. Herbert thought that the best results could be derived from having a few of the best varieties in quantity, enabling the wholesaler to depend on the grower for large orders on short notice. Mr. Herbert, who has seventy-five acres of dahlias under cultivation, predicts a good dahlia season, with plenty of fine flowers to meet the demand.

Philadelphia to Japan.

An order of more than usual interest has just been successfully executed. I say successfully because the satisfaction of the persons for whom the order is intended must always be considered as part of the arrangement. Mr. Kondo, a Japanese merchant, placed an order with George W. Berke, of Atlantic City, N. J., for some plants of Ficus pandurata which he admired in Mr. Berke's shop. These plants were destined for the Emperor of Japan and certain high officials of the Japanese government, toward whom Mr. Kondo entertained strong feelings of loyalty and regard. Mr. Berke entrusted the order to the Robt. Craig Co., of this city, with instructions that every care was to be used to insure the plants reaching their distant destination in safety. Something like five weeks was consumed in the trip via Vancouver. To the delight of all concerned, the plants arrived in excellent condition, bearing

silent but unanswerable testimony to the careful packing given them.

William Jennings Bryan Visits the South.

I know a man steadily climbing the ladder of fame whose cheery good nature wins friends at sight. An honest face you could trust anywhere, people say, to which he calmly replies: "You don't know where I was last night." As though such a face could belong to a pickpocket or a scalawag! To this cheery friend I am indebted to the squib, which REVIEW readers may remember.

Scene: 1526 Ranstead street.

Visitor: "Good morning, William Jennings Bryan."

Edward Reid: "Good morning! Why do you call me that?"

Visitor: "Because the solid south is for you."

Edward Reid returned from a two weeks' visit in the south July 23. He was enthusiastic over his reception by his many friends there and over the progressive spirit everywhere evidenced. Mr. Reid was much impressed by the magnitude of the plan to make a broad highway connecting Jacksonville, Fla., with Washington, D. C., passing through the cities of Savannah, Atlanta, Augusta, Columbia, Camden, Durham, and Richmond, with spurs, principal among them one through Charlotte to Greensborough, N. C. Some sections of this highway are built; others are in progress, convict labor being employed to facilitate the work. Here Mr. Reid quoted Bill Nye, something like this: "I believe in good roads, in putting the convicts to make them and in convicting as many as possible to get them made." If this isn't right, the fault is mine, not Mr. Reid's or Bill's. A form of clay found in the Carolinas, when mixed with sand, watered and rolled, makes a road equal to asphalt.

The floricultural result of Mr. Reid's visit is a resumption of the southern night express, whereby flowers leaving this city at 4:46 p. m. are received early the next morning in the various cities along the route.

Various Notes.

H. Bayersdorfer is expected home from Europe July 31 on the steamer Augusta Victoria.

Charles H. Buenning, Easton, Pa., has

THE Florists' Supply House of America

Summer Baskets

We have some new importations, fresh styles that will please you. Better get a few now and have something original to offer your customers when needed. We especially call your attention to a pretty **Willow Basket,** deep, square top, with long handle, that we think will make up attractively, and also our tall **Twig Baskets,** with pans, painted deep green to match our toneware vases. They are most effective.

Our Novelty Ferneries. Last week we called your attention to our **Cut Glass Bowls,** with nickel-plated pans to match. These are such a good thing that you will make no mistake in using them. **Cycas Leaves.** The largest stock in the country of broad, perfect **Palm Leaves,** in assorted sizes.

To Our Friends: Yes, we will all be at the Cincinnati Convention and we hope to meet you there.

Everything in Florists' Supplies. Send for our Illustrated Catalogue.

The Market.

Last week was a fairly good one, according to reports from some of the leading retail florists, who say that funeral work has been quite plentiful. This, with work from some of the summer garden stars, used up a lot of stock last week. The wholesalers say first-class stock was in good demand in roses and carnations, but the stock in these is only limited.

First-class asters sell well. These are becoming plentiful. White and purple sell best of any. There is a lot of fine gladiolus spikes in the market and they are selling cheap, $2 per hundred and cheaper in thousand lots. Valley, too, is fine, but slow sale. The market has everything in greens.

Florists' Club Picnic.

The annual picnic of the Florists' Club took place July 21, at Ramona Park. The attendance numbered 500 and for once J. Pluvius behaved and nothing happened to mar the pleasures of the day. The grounds were admirable.

The trustees, who were on hand early and had their hands full all day long, were ably assisted by the officers of the club. Messrs. Ostertag, Schoenle and Smith, who had charge of the affair, were given full credit for their work and untiring efforts to make everybody happy. It was one of the largest and best managed affairs ever given by the Florists' Club.

The big event of the day was the baseball game between teams representing C. Young & Sons Co. and the Bentzen Floral Co., which resulted in a score of 23 to 1 in favor of the Bentzen team. The Bentzen pitcher, J. Munsberg, struck out seventeen men. E. Brueger, Young's pitcher, struck out nine men. L. Willis and P. Schriefer were the umpires. Results in other contests were:

Fat men's race, 185 pounds and over, won by J. J. Beneke.

Race, girls under 16 years of age, won by Dorothy Ostertag.

Race, fifty yards, for boys under 16, won by Adolph Steidle.

Egg and spoon race, twenty-five yards, for married ladies, won by Mrs. Lulu Bremer.

Hop, step and jump, won by Fred Alves.

Young ladies' race, twenty-five yards, won by Miss Alice Jablonsky.

Boys' race, twenty-five yards, won by L. Schutte.

Ladies' throwing contest, won by Miss Hartmann.

Bean guessing contest, won by Miss E Cronin.

Eating contest, for little boys, caused much amusement and was won by young Addie.

Men's jumping contest, won by Fred Alves.

Ladies' flower pot breaking contest, won by Mrs. M. M. Ayers.

Weight throwing contest, won by J. J. Beneke.

In the babies' prize throwing contest about fifteen small children took part, each receiving a box of candy.

Race, 100 yards, open to all, fifteen starters, won by J. Rattermann.

Waltzing contest, twenty-five couples participating, Mr. and Mrs. Arthur Jablonsky, first; Fred Foster, Jr., and Miss May Burns, second; Eddie Gerlach and Miss Rose Windler, third. These prizes, the best on the program, were a gold bracelet valued at $25, donated by Henry Kahrs; a gold-headed umbrella, by H. C. Grawe, and a fine parasol, by F. H. Weber, the ladies receiving the prizes.

The rest of the evening was taken up in dancing and boat-riding on the lake.

You know what **hot weather** does to stock. Well, Milwaukee is well favored, as we have no very hot weather here, and in consequence stock of all kinds is still in good shape. Big cut of fancy Carnations, Roses and Giganteums. Try a few shipments and be convinced.

At 11 o'clock the crowd departed for home, when three cheers were given for the Florists' Club and those who had the arrangements in charge.

Picnic Pick-ups.

F. W. Ude, Sr., and Francis Fillmore are the oldest florists on the grounds, each being over 85 years of age, but seemed as young as ever and enjoyed the day's outing.

Fred Ammann and his family, as usual, came all the way from Edwardsville to be with us this day we celebrate. Belleville, too, came out well. E. W. Guyll's family, Mr. and Mrs. A. G. Fehr, Henry Emunds and A. S. Halstead represented that village.

Our four wholesalers, Messrs. Kuehn, Smith, Berning and Angermueller, were out with their families and all their employees. They always have a good time.

Arthur Ellison and his bride came early and received congratulations.

From Kirkwood we found present H. Niemeyer, Edward A. Ahner, F. W. Ude, Sr., W. J. Pilcher and A. Hartmann.

Henry Ostertag brought his family and all his employees and a wagon-load of eatables, enough to feed the whole crowd.

C. C. Sanders and the Sanders family came early; this party numbered eight.

Various Notes.

B. Eschner, of M. Rice & Co., Philadelphia, is in the city this week.

C. A. Kuehn handled a fine lot of lilies last week.

George Waldbart left Monday, July 26, for New York. From there he will sail on the steamer Lusitania, July 28, for a trip to Europe, to be gone until September. His many friends in the trade wish him a safe return home.

Carl Beyer and his wife have been enjoying a trip west. They are expected home this week. When last heard of they were in Denver.

Arthur Ellison surprised his many friends in the trade last week when he announced his marriage to Miss L. Hastings, of Chicago, at Belleville, Ill., Monday, July 19.

The St. Louis Horticultural Society is out with a new preliminary list, announcing premiums for the fall show, also that the show will be held this year in the new Coliseum, Jefferson and Washington avenues, in November. There will also be a pomological display in conjunction with the floral display.

Park Commissioner Scanlan has plans ready for two new parks, Columbus square at Tenth and Carr streets, and De Soto park at Twenty-second and Division streets. Work on them will begin at once.

Mrs. C. Smith, mother of Will Smith, is in Milwaukee this week, visiting her daughter, Mrs. Hunkel. Will Smith is keeping bachelor quarters during her absence.

George Schriefer, of C. A. Kuehn's, is off on a ten-day vacation trip. Mr. Schriefer is due to return to his post the end of this week.

Fred Alves, of G. H. Angermueller's, will start next week for a four weeks' vacation trip.

W. C. Smith, who has charge of the Florists' Club's special car for Cincinnati, announces the special will leave here Monday night, August 16. He added quite a few names for the trip at the picnic last week. This special will be run over the Big Four railroad. Mr. Smith expects by the next club meeting to have enough names of those who are going to fill the car. J. J. B.

NEWPORT, R. I.

The Hodgson greenhouse estate, on the corner of Le Roy and Bellevue avenues, has been sold by the Savings Bank of Newport to John Nelson. It is understood that Oscar Schultz, who during the last few years has built up a large flower business in this city, will occupy the place.

The estate fronts on Bellevue avenue about eighty feet, and is about three times as deep. The greenhouses are modern and equipped with good heating facilities. In recent years, however, they have been permitted to run down somewhat.

NEW YORK.

The Market.

Little stock of roses or carnations is now arriving, but the scarcity does not raise the general average of prices while the flood of asters and gladioli is sweeping in and overflowing the market. Beauties when perfect bring from 15 cents to 20 cents and the best Maids, Brides and Killarneys may be selected at 4 cents, but their number is limited. The most of the roses arriving are small and short-stemmed and the buyer fixes their value.

The supply of orchids is lessening and prices must soon be nearer their real worth. The prospect for this king of flowers the coming season is a brilliant one. The fact of many new sources of supply will only add to their popularity and general use. The smaller cities and towns will utilize them as never before. The shipments from New York will aggregate 100 per cent above all other seasons.

Where all the lilies come from is a mystery. Never has the average price been so low. The big shipments continue. There is no outlet for them in decorations. The wedding bells no longer ring; the steamer traffic is lessening; the general health of the city is improving, and funeral trade is dull.

Various Notes.

This is an outing week also, for July 29 the Greek Association celebrates, July 30 the Florists' Club lunches and speeds one of its members towards the boundless west, and July 31 the growers of the Cut Flower Exchange will banquet at Wetzel's. Early in September the Retail Association will have a dinner and vaudeville entertainment that Mr. Bowe says will set a pace which will be hard to follow. The plant growers, too, have their annual clam bake simmering, so that for the epicurean florist there is an abundance of good things ahead that will make stagnation difficult for some time to come.

The one topic of interest in the wholesale street these days is the Cincinnati convention. If the Boston and New England folks join us at Albany our special will be well loaded by the time it reaches Buffalo. The Florists' Club will have a liberal supply of refreshments of every kind, as usual, and a most enjoyable journey is assured. Secretary Young says that berths are filling fast and those who desire accommodations will do well to write or see him at once. The train is that fast and safe one, the Second Empire, and it leaves the Grand Central station at 12:40 p. m., Monday, August 16.

James McManus is receiving the congratulations of his friends. Both the mother and little lady are doing well.

G. H. Blake, of Bonnet & Blake, Brooklyn, is enjoying his annual holiday with his family at his old home in Rochester.

Mr. and Mrs. G. Supper, of Washington, are spending a couple of weeks in New York, making Brighton Beach their headquarters. Mr. Supper has been with G. C. Shaffer for many years. The young couple visited the Twenty-eighth street district Saturday, July 24, and called on many of the prominent wholesalers.

John Seligman and family are enjoying their annual holiday in the mountains.

Two flower stores have been opened by the same firm in the Hudson Terminal building on Cortlandt street, opposite Peter Henderson & Co.

The ribbon houses that cater to the florists' demands report a wonderful season and an early demand for their novelties. Several of them will have elaborate displays at Cincinnati.

the circle of his trade with the best results in his experience and says the outlook never was so bright. This seems to be the regular report of the commercial seedsmen. A great fall trade for all seems assured. Will Rickards will represent the firm at the convention.

George Saltford is spending his weekends at Fire Island with his family.

W. H. Kuebler, Brooklyn, was handling last week the first dahlias that reached the wholesale market this season.

A. J. Guttman is holidaying at one of the Maine seaside resorts.

A. L. Young got his rest and amusement last week serving his country on jury duty.

O. V. Zangen has added Henry Eicke to his force of salesmen.

Visitors to Madison speak enthusiastically of Charles H. Totty's good fortune in securing the Twombly range of greenhouses.

The fine new wire work factory just erected by H. Kenney on the corner of Dean street and Rochester avenue, Brooklyn, is now complete and Mr. Kenney has in three floors, 31x80, heavily stocked. He also handles tinfoil in wholesale lots and immense quantities of sphagnum, sheath and green moss. The building is of brick and fireproof, with elevator, electric lighting and every modern convenience. The growth of the business has been steady since 1881, twenty-eight years, and the building became a necessity to provide for the increase in the turn over. A force of from twenty-five to thirty-five is constantly employed.

Charles Millang has some land at Bay Shore from which he is cutting some fine long-stemmed asters and sweet peas. His store on the ground floor of the Coogan building has been improved by a new ice-box and handy office.

J. AUSTIN SHAW.

Friends of S. S. Butterfield will give him a farewell luncheon at the Hotel Earlington on the afternoon of July 30. C. B. Weathered, F. H. Traendly, W. F. Sheridan, J. I. Rayner and John Young are arranging the affair and have sent out invitations. It is planned also to present a keepsake to Mr. Butterfield, who is removing to the west.

The board of general appraisers July 19 upheld the Stumpp & Walter Co. in a protest at the assessment of duty on

KENNICOTT BROS. CO.

a recent importation of roses. The appraiser classified them as rose plants, on which the duty would be 2½ cents each, but Judge Waite said Stumpp & Walter were right in claiming entry as rose cuttings, on which the duty is 25 per cent ad valorem.

EVANSVILLE, IND.

The Market.

The usual summer dullness is here. If it were not for an occasional funeral, the store men could close up and go fishing. The dried off roses are producing again, but of course they are short. Carnations are poor. Carnations in the field are growing finely, owing to an abundance of rain, while the cool weather has been a great help to carnations that have been benched. Asters have been slow in coming.

Various Notes.

Julius Niednagel & Sons are having a 150 horse-power boiler made to order, which will heat their enlarged plant. Their old boiler will be retained for use in case of an accident. The old houses have been torn down and the framework of one large house is up, while another is still to be built.

Ben Kramer says business has been dull lately.

The Blackman Floral Co. has been cutting some nice Killarney. E. L. T.

PITTSBURG.

The Market.

The weather was so delightful in this city last week that no one cared whether he got a vacation or not, and those who were away were sorry for it.

Speaking about trade, there is just about enough to give the employees exercise and keep them from going to sleep.

The wholesale houses report trade some better than last year and the stock looks good for summer, especially Kaiserin and Killarney. Asters are becoming more plentiful every day, with enough lilies and gladioli to go around. Carnations are about gone, as there is no one in this section who plants for the summer trade. Anyhow, "what's the use?" Who will buy carnations when asters are right?

Most of the growers here have all their carnations of the Lawson type benched and report stock in the field as looking fine.

Various Notes.

E. C. Reineman has been appointed by the club to arrange for conducting a good sized party to Cincinnati for the S. A. F. convention. If the packets can run, they will probably go by boat.

T. P. Langhans, with his family, leaves this week for Atlantic City.

Schenley Conservatories have not been able to keep up their usual summer show this year, as they are putting in new iron benches in their show houses, in place of old ones which have rotted away, but a visit to their growing and propagating houses will satisfy you, and as soon as repairs and painting are done, there will be something doing at Schenley, and the fall shows will surpass anything they have ever had.

Mr. Harvey, chief manager for Mrs. E. A. Williams, has returned from quite an extended vacation in which he combined business and pleasure. Hoo-Hoo.

CHARLOTTE, N. C.—McPhee Bros., formerly proprietors of the Dilworth Floral Gardens, have gone out of business.

EAST RANDOLPH, N. Y.—Percy Wilks has left for Louisville, Ky., where he is to work for the Randolph Seed Co.

WEST GROVE, PA.—Roney Bros. say they finished benching 10,000 carnation plants just before the twenty-five days' drought was broken, July 22. They planted Enchantress, Winona, Afterglow, Victory, Beacon, White Perfection, The Queen, Dorothy and Eldorado. The plants were short and well branched, but suffering for want of water. Since the rain gave abundant water supply they are taking hold well.

WANT ADVERTISEMENTS.

WASHINGTON.

So great was the success of the recent automobile parade that the Chamber of Commerce, of which Wm. F. Gude is president, has decided to give a similar event September 30. It is expected that practically all the automobiles in the city will be in line, with many from outside, and a large proportion will be handsomely decorated. There will be many fine prizes, but it is announced that cars entered by florists will not compete for the trophies, "as it is desired to stimulate decorative initiative among individuals"; in other words, the florists will not compete with their customers.

The first entry from outside Washington came from the Old Dominion Evergreen Co., which supplies ferns and galax to Washington and other florists. Manager Deeble, who resides in Fairfax county, Virginia, says his car will be decorated with greens.

LOUISVILLE, KY.

The Market.

Business has settled down to the regular summer level and the store people are having some long, dreary days. Very little work of any kind was to be had during the last two weeks.

Asters are coming in, and they are the best sellers at present. Some of the growers are having fair success with them; that is, those who are growing them inside, for asters here in the field are almost a complete failure.

Carnations are about done for this season, and a good many growers have replanted all of their stock. Owing to the heavy rains, carnations in the fields are suffering greatly with stem-rot. With the exception of one or two growers, all have lost a good many plants. There are a good many roses and a fair call for them. Green goods are in good supply.

The Picnic.

The Kentucky Society of Florists gave its annual outing at Stowe's grove, on the Eighteenth street car line, July 22. The weather was ideal and a good crowd was in attendance. H. Kleinsteuber, Louis Kirch, Robert Miller, Joseph Wet-

tle and Fred L. Schulz were on the committee and they certainly showed the crowd a good time. Louis Kirch was the busiest man to be seen.

The ball game was hotly contested and was won by the Boosters by the score of 19 to 9, a one-sided score, but the Knockers gave the Boosters a run for their money. There were no features to the game; it was one big feature. Charles Markmeyer, the New Albany pot maker, was the umpire and did good work.

The Wettle family were the fastest people there; father, mother and son each won a foot race. There were numerous other amusements that were enjoyed by young and old.

A balloon ascension marked the finish and everybody was sorry that the day was over—thanks to the committee.

K. R.

PROVIDENCE, R. I.

Annual Outing.

A score of the members of the Florists' and Gardeners' Club of Rhode Island visited Pawtucket July 19 and were entertained on the old Dunnell estate, on Prospect street. It was the occasion of the annual summer outing and monthly meeting of the club and the members were the guests of James Hockey, a former president of the organization. The party left this city just before 4 o'clock, and upon their arrival at the grounds they were given a most hospitable reception. After a short social time the business meeting was held, at which the president, Charles Macnair, presided. As there was nothing but routine matters for consideration, these were quickly disposed of. After that a lunch was served on the lawn, and at the conclusion of this the party visited the greenhouses and the new Memorial hospital that is being erected on the premises. It was nearly dark before the party broke up and the host was given a hearty vote of thanks for his hospitality.

The committee which arranged the details of the outing consisted of James Hockey, William Hill, Eugene Appleton, Michael Sweeney and James Dillon.

Various Notes.

A small greenhouse on the estate of L. E. West, at Hampden Meadows, near Barrington, was burned on the night of July 19. The greenhouses as well as the dwelling and other buildings belonging to Walter S. Nichol had a narrow escape, the sparks setting the latter's dwelling on fire at the roof, but the neighbors, forming a bucket brigade, succeeded in saving his property. The explosion of an oil stove in the house of a neighbor caused the trouble. The house, two barns, several sheds and Mr. West's greenhouse and its contents were destroyed. The loss was about $6,000.

Thomas Curley will put the new house which he is erecting on Harkness street, this city, to palms and ferns.

M. Macnair has recently hoisted a new flag on the building in which his store is located. It is red, with the name "Macnair" in white block letters.

Albert Hoscher and Nels Pierson are bringing in some fine early asters.

John F. Wood has added a fruit de-

Pres., J. C. Robinson, Waterloo, Neb.; First Vice-pres., M. H. Duryea, New York; Sec'y and Treas., C. E. Kendel, Cleveland, O.

THE season has been one of too much rain at the start, and too little later.

THE REVIEW is glad to hear from seedsmen with news items for this column.

THE Henry F. Michell Co., Philadelphia, is establishing a trial ground and seed farm at Torresdale, Pa.

NOTHING definite can be said about the bean crop, but at present the outlook for a good harvest is not encouraging.

THINGS are quiet in the seed trade just now; many are on vacation and little is doing in a business way. Rain is wanted.

C. H. MACKUBBIN, of Henry A. Dreer, is on his annual vacation, before taking up in earnest the work of preparing for the new season.

E. J. DEAL, general manager of W. W. Johnson & Son, Ltd., Boston, England, sails from Liverpool Saturday, July 31, for a visit to the seed trade in this country.

IT is reported that the season in the seed growing districts in England was from two to three weeks behind, but that good progress has been made during the present month.

REPORTS from California are to the effect that the hot wave which swept over the Santa Clara valley about June 23 cut down the sweet pea crop below previous estimates.

THE medium ripening peas are the kinds that will suffer most from the lack of seasonable rains. The earlies were far enough along before the drought came, and it is hoped that rain will come in time to save the later crops.

ADVICES from Wisconsin continue to reflect a strong probability of a shortage of the earlier varieties of peas; some of the packers say the yield of these sorts at the canning stage was not much more than half the normal.

THE Italian government has presented Augustus H. Goodwin, vice-president of the W. W. Barnard Co., Chicago, and Mrs. Goodwin with a gold medal in acknowledgment of valuable services in organizing the first American Aid Society in Palermo the day after the Messina earthquake.

THE radish seed crops of Michigan needed rain at last accounts; otherwise conditions were all that could be desired.

ONION seed patches in the central west are said to be doing well and, if a blight does not strike them, the harvest will be satisfactory.

CONTINUED dry weather at Chicago will lessen the onion set crop considerably. It may also cause necks in the late-seeded plantations.

THE T. Lee Adams Seed Co., Kansas City, has been incorporated, with $15,000 capital stock, by T. Lee Adams, H. C. Luck and Steward Taylor.

THE pea canners in general are complaining that their pack will be much shortened on account of uneven ripening. The weather is to blame for this condition, they say.

A NEW machine for the harvesting of onion sets is to be on exhibition July 28 at South Holland, Ill. If it will surely harvest this crop properly the inventor will make good. Set growers, however, are skeptical about its working well.

THE body of C. Willard Smith, of the Leonard Seed Co., Chicago, who was drowned in Lake Michigan near the Chicago Beach Hotel, July 18, was washed ashore near Gary, Ind., July 23, and remained unidentified for four days, when A. H. Smith, office manager of the Leonard Seed Co., was notified.

GROWER'S SUIT SETTLED.

The suits of the Braslin and Pieters concerns in California have been settled. The Hollister Bee of July 23 contained the following announcement:

"What promised to be the biggest

litigation suit in the history of the county, involving a sum of some fifty thousand dollars between Chas. P. Braslin, the Braslin Seed Growers and A. J. Pieters Seed Co., was compromised and settled out of court on Saturday, and it is understood was greatly to the advantage of the Pieters Seed Co.

"The terms of the settlement have not been disclosed, but they are such that the case of Chas. P. Braslin vs. the Pieters Seed Co., entered in the courts of San Francisco, and the cross suit of A. J. Pieters Seed Co. vs. the Braslin Seed Growers Co. in San Benito county, have been withdrawn. Attorney Geo. W. Jean represented the Pieters Seed Co. and conducted the negotiations that led to the above result."

NEBRASKA SEED CROPS.

Wm. Emerson, of the Western Seed and Irrigation Co., Fremont, looks for fairly satisfactory results on most Nebraska seed crops this season. This is the way he summarizes the situation:

"The present crop prospects are fairly good throughout Nebraska. Generally speaking, we have obtained pretty good stands of sweet corn and field corn, also vine seeds, with some exceptions which are only partial stands or total failures.

"In the melon growing district some of our crops were hurt by the hail of June 13, but most of them have been replanted, and, although these crops will be late, we hope the season will be such they will make all right.

"Cucumbers are doing well, but the

acreage is small compared with former years. Pumpkin and squash are fair stands and in good growing condition. Some of these crops have been damaged by ground squirrels and striped beetles.

"We had heavy rains during the latter part of June and the first part of July, and some of the crops are a little weedy, but otherwise most of them are in good growing condition, and with favorable conditions the balance of the season we hope to make good deliveries."

IMPORTS.

The imports of seed through the port of New York for the week ending July 17 were as follows:

Kind.	Pkgs.	Val.	Kind.	Pkgs.	Val.
Canary	744	$3524	Grass	863	$2905
Caraway	200	1457	Hemp	350	1452
Cardamom	8	253	Mustard	100	1090
Castor	1366	4660	Poppy	300	1467
Celery	30	410	Rape	104	795
Clover	450	7427	Other		1163
Coriander	222	330			

In the same period the imports of bulbs, trees and plants were valued at $14,789.

THE CLARINDA SEED SHOP.

Not many people know it, but W. C. Brown, president of the New York Central railroad, is a seedsman; he is a stockholder in the A. A. Berry Seed Co., Clarinda, Ia., and attended its annual meeting, held in its offices July 13. The report of the business then presented showed the season of 1909 to have given an increase of thirty-five per cent over any season since the business was incorporated. The officers are: President, A. A. Berry; vice-president, George W. Standage; secretary, J. F. Sinn; treasurer, A. F. Galloway.

Last season A. A. Berry determined to go into onion sets and this spring he put in quite an acreage at Clarinda and also at Council Bluffs. The continued wet weather through June and the first part of July seriously affected the crops, at both places, but especially the Clarinda fields. Harvesting has been begun and the yield is much below the average.

BURPEE'S NEW SPENCER PEAS.

Since W. Atlee Burpee mailed their circular, dated July 15, offering seeds of new sweet peas, they have been advised by telegraph by the growers in California that the crops of Othello Spencer and Aurora Spencer were turning out much shorter than was expected when Mr. Burpee, his sons and Howard Earl visited the valley in June; they therefore have withdrawn their offer of these varieties in bulk.

The quartette of Burpee Spencer novelties this year will consist of Mariam Beaver, a distinct new color, approaching terra cotta; W. T. Hutchins, light apricot; Prince of Wales Spencer, rose-carmine; Senator Spencer, a varying combination of deep claret and chocolate, striped and flaked on a ground of light heliotrope. These four and the 1908 varieties, Othello Spencer and Aurora Spencer, are being offered simultaneously to the trade in England and America, in packets only. Mr. Burpee is personally looking after the English end.

to visit the trial grounds of the Leonard Seed Co., which are located on the Cook estate. Over 200 varieties of peas are in fruit, and they are a sight well worth seeing; in fact, if they were roses in an equal state of cultivation, people would flock for miles to see them.

"The object of the trial ground is to be able to tell the characteristics and quality of seed issued by the company, there being planted a sample of everything sold, and the cultivation of new varieties. The rogue and the imperfect plant, growing side by side with the perfect plant, are easily detected, and the new varieties, of which there are several, can be watched and tended with care. The relative time taken to mature can also be studied, as the date of planting, etc., is carefully tabulated.

"No one can tell the lessons that are taught, for thirty-five years of experience is back of the garden. Visitors are welcome, and one must see the plants and learn their history in order to understand the care employed in the work done."

UNCLE SAM'S TRIAL GROUNDS.

A Trip to the Arlington Farm.

No one in the seed trade has ever described a visit to the Arlington Trial Grounds of the Department of Agriculture; consequently it may be profitable to give a brief account of a visit I made there during the last part of May, armed with a cordial letter of introduction from Professor Galloway, which secured for me all desired attention, very courteous attention, from the station staff, to whom I returned my thanks.

The farm, variously estimated at from 400 to 500 acres, is a long parallelogram located between the Arlington National cemetery and the Potomac river, half a mile distant and immediately at the foot of the hills in front of the Arlington mansion, and within two miles, in a direct line, of the buildings of the Department of Agriculture—the whole city of Washington spread out in panoramic view across the silvery waters of the Potomac.

The way of approach is either by the upper Potomac bridge at Georgetown or over a lower Potomac bridge by trolley from Twelfth street. A connecting trolley over the river, some distance back and running parallel with the shore, joins the Virginia ends of the two bridges.

About forty minutes is the time consumed in reaching the farm from the offices of the Department of Agriculture. The connecting trolley, running between the upper and lower bridges and parallel with the river, skirts the western side of the farm and passes within 400 yards to the west of the farm buildings.

The Buildings and Their Location.

These farm structures comprise a large barn, affording accommodations for about twenty horses, with the necessary hay and straw lofts and harness and feed rooms. There are other buildings for the storage of implements and tools and the storage of seeds and material. There are also machine, carpenter and blacksmith shops, several offices, and two residences for superintendents. Professor L. C. Corbett is in charge of the farm.

The location is fine as respects the overwater view of the city, and no doubt the location has a high prospective value as a brick-yard site. It is fine as respects the back framing of the exquisite contours of the wooded hills and glades of Arlington, where are the graves and stately monuments of that silent army of nearly 40,000 comrade heroes of the northern army of every arm and rank—a cemetery not approached in the world for natural scenery and historic association. But as a farm for plant investigation I should say that the location was most unfortunately selected as respects character of soil and surface contours, all of which are just about as unfitted as nature could make them.

Unsuitable, Though Beautiful.

The soil is unsuitable in the physical features of texture, chemical composition, drainage and aëration, and is made of three or four types of soil deposits, all of which might in a general way be classed as of the Patuxent class, all of highest plasticity. There are heavy clays, quite siliceous, richly colored and variegated, inter-stratified with lighter-weight sandy loams still further varied by the streaks of sand and gravel, the whole so constituted as to present such a lack of uniformity, spreading over broad tracts of land, as would defeat any extensive scientific comparison. No doubt it is a soil fairly productive of crops of rye and clover, but still such as would make the owner wish someone else had to do the farming.

If, instead of being a testing ground to prove the quality of plants, it was established as a farm on which to demonstrate how clay land could ultimately be enriched and finally brought into subjection, it would be a most excellent location, valuable as a sort of kindergarten to demonstrate soil improvement—I will not say reclamation, for this tract never was reclaimed to a condition of general agricultural fruitfulness, and now can only be brought to good tilth and general productiveness by the expenditure of a large sum of money. Of course much can be done and no doubt will be done by an unlimited expenditure of the nation's cash in conducting operations of drainage, aëration and fertilization of the soil by the plowing in of green crops.

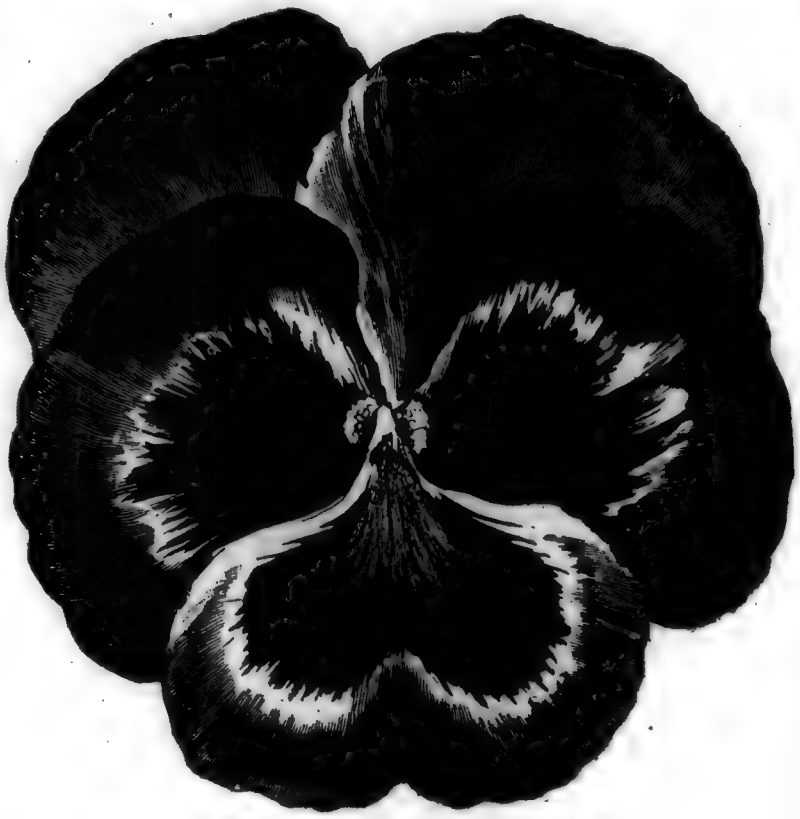
Lack of Soil Uniformity.

It is self-evident that for purposes of scientific determination of agronomic subjects, the soil conditions on any location, while not necessarily the richest, must of necessity be of the same texture, exposure, composition, drainage, levels or dips of surface, and all those other influences which go to make up a uniformity of circumstances over broad surfaces. Otherwise no conclusion can be exact, and none of these important requirements for a searching analysis of plant growths are to be found on the Arlington farm.

I doubt if there is as much as ten acres of level ground; in fact, the contours of the surface fluctuate from 10 to 20 degrees. This fluctuation in levels can at once be perceived as unsuitable for trial tests, for, as before remarked, the conditions surrounding field tests must all be similar, not only as respects quality of soil but all other physical qualities.

Years ago I read a most interesting English book entitled "Chronicles of a Clay Farm," the story of how a most unprofitable site for agricultural operations was brought into cultivation and made most productive, and I believe such could be done on this government farm after a considerable expense of time and cash, but such a soil improvement has no connection with the establishment of a testing grounds for determining the respective merits of plants.

Experiments With Forage Crops.



Professors Corbett and Tracy and Mr. Butterfield, superintendents in charge of the experiments, most courteous and capable, are doing the best possible, each in his own line. The experiments are interesting and such as will no doubt result in the development of improved types. For example, there are probably fifty kinds of timothy tests, with rows

PANSY

Famous Strains of Mammoth Mixed Pansies

S. & W. Co.'s Non Plus Ultra

Our Non Plus Ultra Pansy is a mixture containing the largest, handsomest, most perfect varieties ever sent out. The beautiful coloring and variety of marking give a bed of these pansies a most brilliant appearance. The seed having been saved from the greatest assortment of types, including only the best of Giant Cassiers, Bugnots, Trimardeaux and Giant English, French and German strains. Finest mixed, per trade pkt., 25c; per ¼ oz., $1.50; per oz., $5.00.

Pansy—World's Best Mixture

World's Best Mixture

This mixture is the result of careful selection, from the very largest and finest pansies, of all the varieties; and we can safely say that a better or finer strain it is impossible to get. Per trade pkt., 50c; per 1000 seeds, $1.25; per 5000 seeds $5.00.

Very Large Flowering Varieties

These are remarkably large Pansies, which, for size of flowers and robust growth, eclipse all other strains. Their rauge of color has heretofore been limited, but this season we are able to offer several grand new varieties.

342 West 14th Street, NEW YORK

Mention The Review when you write

in each case twenty or thirty feet long, each grown from a distinct seed head taken from plants of a previous growth which showed different and inferentially valuable characteristics in leaf or other qualities. The seed from these selected plants will be saved and sown a succeeding year, to be further developed or cast aside, according to the retention or loss of valuable qualities. These experiments show a wide difference in desirability, demonstrating that the differences in timothies are not alone in price per bushel.

Just so with alfalfa, of which there are probably nearly 100 trials from all parts of the world where alfalfa is cultivated; the tests being of plants of many variations in character and habit, some very promising, others not worth cultivating.

And so the trials run through a great variety of clovers, grasses, cowpeas, soy beans, but nearly every sample of everything was patchy, no doubt because of imperfect germination and subsequent difficult vegetation on this most unpropitious soil. The forage crops are in charge of Professor C. V. Piper.

Cereals, Vegetables and Fruit Trees.

The cereals, as wheat, rye, oats, barley, are tested in the same comparative manner. Some of the seeds are from foreign countries, some from selected heads saved on the farm, the most promising selections to be continued until further established or discarded. These are experiments of a most valuable nature.

The test of esculent garden vegetables was disappointing, both in extent and development, there being many private establishments where the systems of culture are far more practical and the varieties under test ten times as large.

GIANT PANSY SEED

The KENILWORTH Strain

is unsurpassed; the immense flowers of 3½ to 4 inches are of perfect form and substance; every tint and shade is produced in striking combination and endless variation of beautiful colors and markings; it is the result of years of selection; it embraces the largest and best of English, French, German and American novelties; 1909 seed greatly improved by rich shades of brown bronze, red and mahogany. New seed: 1000, 25c; 2000, 40c; 6000, $1; ¼ oz., $1.40; ½-oz., $2.50; oz., $5.

RAINBOW is a blend of over 50 of the latest introductions of giant pansies, of the most beautiful, gorgeous colors, blotched, striped, veined, margined, etc. With every $1.00 worth of Kenilworth strain, I will send 1000 of Rainbow free; and with other amounts in like proportion.

JOHNSON SEED CO., 217 Market St., Philadelphia, Pa.

Mention The Review when you write.

Other experiments included the growing of fruit trees, as peaches, pears, plums, that observations might be had upon action in the open air and underground depredations of insects; experiments as to the desirability of different species of willows for basket work; investigations as to prevention of injury by underground and overground insects to the cranberry plant; experiments in the growth of medicinal herbs and the habits of the plants—all very interesting. But the thought was constantly occurring, "Why is all this done on a soil fit only for a brick-yard, when the Department could have gone out into Maryland and found thousands of desirable farms?"

Has Someone Blundered?

On the Maryland side the government could have procured hundreds of admirable locations within the limit of the extensive range of the so-called "sassafras loams," a sedimentary deposit of an early age; soils with a depth of ten inches of soft, brown loam, resting on a heavy reddish-yellow loam two or three feet in thickness, which in turn rests on gravel, all with satisfactory drainage; such soils as have proved admirably adapted for the growth of all sorts of vegetables and fruits. Other good soils available are those of the so-called Norfolk and Portsmouth deposits, but not circumscribed to those particular localities.

Many of the experiments at Arlington are repeated under some sort of a working agreement at the Virginia State Truck Experimental Station at Norfolk, the Virginia Agricultural Station at Blacksburg, and the Maryland Agricultural Station at College Park, all of which is an excellent plan, yet the tests at the national station should be made under the best conditions, as regards soil and field exposures, so as to be almost incontrovertible in all respects, except as influenced by local climatic conditions.

No citizen should hesitate to criticise an apparent misapplication of public money, and almost a waste of valuable technical services by scientific men in charge. In selecting this location someone has blundered, grievously blundered, and before much more government cash and time of scientific workers are spent, there should be a quick removal to a better chosen location.

Those Free Seeds.

I have visited many agricultural experimental stations at home and abroad, and on them I have seen lands under processes of improvement, but never any land so bad to commence with as that of the Arlington farm; yet it is just on a par with much else in connection with the Seed Section of the Bureau of Plant Industry, a section in that bureau which has for many years been a stumbling block to the proper elevation of the Bureau of Plant Industry in the mind of the public, such a stumbling block as drags not only that bureau but the whole Department of Agriculture into ridicule, for millions of American citizens are not in touch with the problems of forestry, animal industry, irrigation, drainage, entomology, chemistry, soils, biological investigations of plants and soils, and many other important investigations and promotions of the Department of Agriculture.

The fact is, the mass of people measure the Department of Agriculture as a

Lilium Harrisii

Now Ready for Delivery

Our first consignments have just reached us and we are now filling early orders. **Easter comes very early next year, March 27,** and a good many growers will have difficulty in getting Japan Longiflorum in flower in time, and there will be an extra demand for Harrisii in consequence.

In view of the fact that **crop is short,** we advise those who have not already placed order to lose no time doing so. Last year we were not able to meet the demand for our selected Harrisii on late orders, so we urge customers to order without delay. At present we have a good supply still to offer, and will be able to take care of early orders, but there should be no delay in ordering, as there is sure to be a scarcity of good stock, especially in the large sizes.

We offer a selected stock of the original, true Harrisii for early forcing. These bulbs have been grown from the original pure Harrisii, and will be found splendid stock for early forcing, for which purpose Harrisii is so valuable. We have had the stock inspected, and are assured it is almost absolutely pure and almost entirely free from disease. It is not stock picked up indiscriminately from different sources, but is grown from one stock, and will be found very superior to the ordinary Harrisii usually offered, both in regard to freedom from disease and purity, and not the late type now so often furnished.

6/7 inch bulbs, 350 to the case	**$ 6.00 per 100;**	**$ 55.00 per 1000**
7/9 inch bulbs, 200 to the case	**9.00 per 100:**	**85.00 per 1000**
9/11 inch bulbs, 100 to the case	**20.00 per 100;**	**180.00 per 1000**

whole by the sixty millions of cheap packets of common garden seeds it sends out at the behest of Congress, through the Seed Section of the Bureau of Plant Industry, a distribution not in any sense designed to elevate agriculture, but barefacedly to keep the memory of the congressmen green in the minds of their constituents.

Should Not Play Second Fiddle.

So long as the government has an experimental farm, or agricultural station, or whatever it may be called, it should not in any way play second fiddle to any state experimental station, but situated as the present farm is, it can never assume a leading place, while the work of the scientists of the field staff is almost a waste of time compared with the good work they could do under more favorable circumstances.

Nearly all governmental projects, once commenced, go far beyond the original plans, and in the case of a national farm it may be considered as one which will be greatly developed, but if the location has been badly determined upon, the operations will be forever handicapped the adverse physical conditions.

The writer does not advance objections a national trial grounds. On the contrary, he firmly believes such a government station would be fully within the province of the Department of Agriculture, for testing and reporting the quality and suggestively pointing out any errors in nomenclature, covering what is apparently the same plant advertised under another name. While the Department of Agriculture neither can claim infallibility in judgment, nor lay down the law

as to relative merits or as to apparent cases of renaming an old variety, yet it can legally infer what are old varieties newly named, as in the case of vegetables, flowers, grains, forage plants and fruits, and whether so-called varieties are better or worse than other sorts which they closely resemble.

Annual quality tests and a nomenclature review would be perfectly proper, and if made by experts above suspicion of favoring certain seed establishments, would prove of untold value as guarding the public against frauds at the hands of irresponsible seed fakers, of which there are far too many.

What Might Be Accomplished.

On a well selected site there could be pursued, with a fair measure of success, in addition to quality and nomenclature tests, many investigations connected with scientific agronomy, as the cross-breeding of grains and other plants, field studies of soils and drainage, weather problems, the practice of green manuring, bacteriological studies, all studies of plant diseases, plant enemies and control of the same, energizing application of currents of electricity, irrigation systems as applicable to different conditions, and a hundred and one other demonstrations, which should be conducted on most thorough lines or not at all, for anything less than a thoroughly up-to-date station will cast ridicule upon the national Department of Agriculture, especially as some of the states have already established stations of highest grade, and unless the national station be in location, equipment and experimental and extension work equal to or above those of state establishment, a national station had better not be established at all. But such studies cannot, until after years of preparation, if ever, be conducted on a site only fit for a brick-yard.

I sincerely trust these remarks will not give any offense to the officers directly in charge of the Arlington farm, as my impressions of their work are thoroughly complimentary, but I do not hesitate to condemn most emphatically those at headquarters, on whom rested the selection of this government farm. Certainly their judgment was not that of competent farmers, still less of agronomists of any ability.

LEXINGTON, KY.

The Market.

We have had a week or two of ideal summer weather. There is but little change in the situation, business still being dull. Roses and carnations are poor and are little called for. Some asters are being cut and they are of fairly good quality. In a week or two there will be a good supply. Gladioli are good and there is enough to supply the demand. Tuberoses and other short stock are plentiful and sell slowly. Snapdragons of good quality are also on the market.

All the growers have about finished planting roses, carnations and chrysanthemums, and the stock is looking well.

Various Notes.

From all reports, Lexington will be well represented at the convention this year.

J. Ferdinand Keller, of the J. A. Keller estate, is sending some good asters to the downtown store.

James P. Keller has returned from a visit to Chattanooga, Tenn., and other southern points. He reports having enjoyed the trip immensely.

Honaker The Florist had two of the prettiest windows ever seen here last week. One of them was a waterwheel scene and the other a cottage built on a hill, with ornamental grounds surrounding it.

David Honaker and his wife have returned from their vacation, which they spent in St. Louis, Mo. Mr. Honaker has been ill for several weeks, but it is hoped that he will be able to be out again soon.

John Christman, of the Paris Greenhouses, Paris, Ky., is building another house, 20x70, and installing a hot water boiler. He reports a highly satisfactory spring business at that place.

John Krahenbuhl, gardener to Mrs. A. J. Alexander at the Woodburn Farm, Spring Station, Ky., and Fred Schneider, gardener to Governor A. E. Wilson at his mansion, Frankfort, Ky., were recent visitors in this city, calling on August Le Clere, florist at the Eastern Kentucky Lunatic Asylum.

Anderson & White have finished planting chrysanthemums.

The Michler Bros. Co. is about ready to begin on its new house, which will be used for the growing of bedding plants.

Sidney S. Offutt has bought from G. M. Taylor his retail seed and feed business on Main street, near Broadway, and is moving the stock to premises a few doors below the Taylor store.

NOTICE

To all American Nurserymen and Seedsmen desiring to keep in touch with commercial horticulture in England and the continent of Europe: Your best means of doing this is to take in the

Horticultural Advertiser

Our circulation covers the whole trade in Great Britain and the cream of the European firms. Impartial reports of all novelties, etc. Paper free on receipt of 75 cents, covering cost of postage yearly. As the H. A. is a purely trade medium, applicants should, with the subscription, send a copy of their catalogue or other evidence that they belong to the nursery or seed trade

AMERICAN ASSOCIATION OF NURSERYMEN.
Officers for 1909-10: Pres., F. H. Stannard, Ottawa, Kan.; Vice-Pres., W. P. Stark, Louisiana, Mo.; Sec'y., Geo. C. Seager, Rochester, N. Y.; Treas., C. L. Yates, Rochester, N. Y.

THE drought in the east has been broken, but the rainfall was not as copious as many would like.

DR. E. W. GROVE, who bought the Drake property at Asheville, N. C., has acquired thirteen lots adjoining and has commissioned the Biltmore Nursery Co. to convert the entire property into a residence park.

PACIFIC COAST NURSERYMEN.

The Pacific Coast Association of Nurserymen held its annual meeting at Seattle, Wash., July 15. The following officers were elected:

President, S. A. Miller, Milton, Ore.; secretary and treasurer, C. A. Tonneson, Tacoma; vice-presidents, F. H. Stanton, Hood River, Ore; O. F. Smith, Blackfoot, Idaho; J. Maxwell, California; W. M. Grisinger, Salt Lake, Utah; Richard Layritz, Victoria, B. C.; F. A. Wiggins, Toppenish, Wash.; A. McGill, Hillsboro, Ore.; A. Lingham and J. A. Stewart, Christopher, Ore.

Before electing officers there was a program of addresses. "Nursery and Fruit Conditions for the Respective States and Provinces" was discussed by H. A. Lewis, Russellville, Ore.; J. A. Stewart, Christopher, Wash.; O. F. Smith, Blackfoot, Idaho; T. E. Mabee, Fresno, Cal., and Richard Layritz, Victoria, B. C. A. Brownell, of Portland, read a paper on "Nursery Conditions in the Northwest." "Ginger and Entomology from a Nurseryman's Standpoint" was discussed by Charles A. Chambers, of Fresno, Cal.

President-elect S. A. Miller, among other things, said:

"The matter of by far most importance today seems to be for nurserymen to come into closer touch with the orchardists. The majority of the public seems to be under a wrong impression as to the motives of the nurserymen. I believe that this has been the cause of radical legislation in some of the states against the nurserymen. The nurseryman is held responsible for insect pests, blights and diseases. Fruit growers often look on him as the propagator and distributor of the obnoxious scale and aphis, little considering that the nurseryman, for his own interest, can not tolerate such things in his nursery, as young trees can not be raised successfully in a nursery infested with insects and disease, any more than healthy children can be raised in an insanitary home. The nurserymen are not only working with the orchardists for clean and healthy orchards, but are taking the lead in demanding the enactment of efficient agricultural laws and systematic examination by competent inspectors."

The association voted to hold its next annual convention at Walla Walla on the second Wednesday in July, 1910.

GREEN-STRIPED MAPLE WORM.

One of the most troublesome pests known to nurserymen is the green-striped maple worm, which eats the leaves, often defoliating the tree entirely. This, according to the description given by the U. S. Department of Agriculture, is a naked caterpillar, yellowish green, nearly two inches long. The moth of this caterpillar is of a beautiful pale yellow, shaded with delicate pink. The spread of wing is about two inches.

The insect abounds especially in Kansas, Nebraska, Missouri, Illinois and Iowa, but is found also in the Gulf states and in the north and east. In Missouri there are two broods in a year and each female moth lays at least 150 eggs.

Some birds eat the green-striped maple worm, such as the robin, bluebird, tufted titmouse, red-headed woodpecker and others. These should be protected.

Paris green sprayed on the trees will kill the young caterpillars; one pound to fifty gallons of water may be used, but one-half pound will probably be sufficient. Arsenate of lead may be used as strong as two to four pounds for fifty gallons of water.

A trench dug about the tree a foot deep, with sides sloping under, will trap large numbers of caterpillars as they leave the tree in search of a place to bore into the ground and enter the pupa stage of their life. In the trench they can be easily killed.

SOME USEFUL VIBURNUMS.

Viburnum Rufidulum.

Viburnum rufidulum is also known as V. prunifolium ferrugineum. Some doubts have been expressed as to its hardiness in the northern states, but it has come through recent winters with us unscathed. It grows into quite a large shrub, sometimes twenty or more feet in height. The leaves, which are three to four inches long, are dark green and shiny on the upper surface. The showy flowers are pure white and produced in cymes four to five inches across, these being followed by the dark blue, oval-shaped fruits, which are decidedly decorative, and worthy of a place in every collection.

Viburnum Wrightii.

Viburnum Wrightii, similar to V. molle, but looser in habit, makes an upright shrub eight to twelve feet high. The broad cymes of flowers, white in color and three to four inches in diameter, are produced in early June, and are followed by the globose-shaped fruit, which is red in color. This shrub is a native of China and Japan, but is quite hardy.

Viburnum Dilatatum.

Viburnum dilatatum is less common than V. Lantana, dentatum, Lentago and other varieties, and is not seen to any considerable extent in our public parks. It is a Japanese shrub, with a low, spreading form. The leaves are attractive, as are the white flowers, but the vivid scarlet fruit, which appears in fall, is the greatest charm. This is a perfectly hardy variety, worthy a place in every collection.

Viburnum Sieboldi.

Among the noticeable characteristics of Viburnum Sieboldi are its long, thick, glossy green leaves. It is quite a tall grower, sometimes attaining a height of fifteen to twenty feet. The panicles of white flowers, three to four inches in diameter, were fully open near Boston this season May 29. The oblong fruits turn first pink and later bluish black, but fall soon after ripening. When in flower, this is one of the most beautiful of the genus. It is a native of Japan, and not common in gardens.

Viburnum Dentatum.

Of the various viburnums used for landscape effects, there is none more satisfactory than the arrow-wood, Viburnum dentatum. It is of the easiest possible culture, will grow in practically any location, and succeeds well either in sunshine

or shade. Where an immediate block of deciduous shrubs is wanted, nothing is more suitable than this viburnum, and it is one of our most useful native plants. Some people may object to it as being common, but the glossy green foliage, curiously dentated, the numerous heads of pure white flowers in late June, and the crimson berries, which turn a pretty blue color in fall, are each and all attractive. This viburnum makes rapid growth, moves capitally either in spring or fall, and is one of the most useful of the genus.

Viburnum Tomentosum.

While Viburnum plicatum is usually looked upon as the most beautiful of the viburnums, we personally prefer the single or fertile form of it, V. plicatum var. tomentosum. It is decidedly more picturesque than V. plicatum. It is a stronger grower, and when not crowded, but allowed to show itself, many people would prefer it to V. plicatum. The leaves are dark, felty, and flatter than those of V. plicatum. The flowers are produced on flat racemes very abundantly, later than those of V. plicatum. It is unfortunate that neither V. tomentosum nor V. plicatum will come through a severe northern winter unscathed, unless protected. Many fine plants were practically cut to the ground after the severe winter of 1903 and 1904, and those having good plants will do well to give them the protection of some evergreen boughs. This viburnum moves badly in fall, and any planting should always be done in spring. W. N. C.

BEATRICE, NEB.

Florists and nurserymen took a prominent part in the annual summer meeting of the Nebraska State Horticultural Society, held here July 21 and 22. The sessions were held in the reception hall of the new Burwood hotel, which was tastefully decorated with palms, ferns, fruit and flowers. In addition there was a creditable display of ornamental shrubbery, gladioli, perennial blooms and fruit. Ed Williams, of Grand Island, read an especially good paper on "Perennials." A. D. McCandless, of Wymore, read a good paper on "Parks in Villages and Small Towns," and C. S. Harrison, of York, held the interest of all with his discourse on "The Evergreen."

The second morning of the meeting was spent in automobile rides about town and to the German Nurseries and the greenhouses of the Dole Floral Co., following which the members were the guests of Charles and F. Sunderegger and E. W. and W. A. Dole, local florists and nurserymen, for dinner at the Burwood. At the afternoon session the directors' reports were given and there were interesting papers—Supt. E. C. Bishop, of Lincoln, on "Horticulture in Our Public Schools," and by V. V. Westgate, also of Lincoln, on "Roses for Outdoor Planting."

C. H. Green, Fremont, and Ed Williams, Grand Island, were visiting florists. The nurserymen in attendance were Ed and Lou Welch, Shenandoah, Ia.; A. J. Braun, Geneva; C. G. and H. Marshall, Arlington; C. S., W. A. and Harry Harrison, York; G. G. Christey, Johnson, and Mr. Gage, of Fairbury.

The officers of the Horticultural Society are: President, Charles H. Green, Fremont; first vice-president, W. A. Harrison, York; second vice-president, Ed Williams, Grand Island; and treasurer, Peter Youngers, Geneva.

The Market.

Business is fair, considering we have entered upon the dull season. Home grown roses and carnations are of poor quality, but good ones are being shipped in. Lilium auratum and Lilium speciosum are used much for decorating. Sweet peas are good and are in great demand.

Various Notes.

Eric Thompson, formerly an employee of Baur Floral Co., has built a greenhouse near his home on West Tenth street.

Will Minnigheim, also a former employee of the same firm, is now located at Hamburg, N. Y. He has erected four new greenhouses 40x204 and has a fine trade.

There was a mistake in the previous issue of the REVIEW regarding the fire at the store of the Baur Floral Co. It was a 50-dollar fire, instead of a 5,000-dollar one.

Miss Ella Liller has taken a position as saleslady in Charles G. Offerle's store.

Robert Bernie, rose grower, has taken a position with Baur Floral Co. B. P.

I WANT to say that your paper covers considerable territory. We received an order from New Zealand for seeds and the firm said they saw our adv. in the REVIEW.—JOHN J. PERRY, Mgr. Baltimore Florists' Exchange.

Vegetable Forcing.

TOMATOES AND CUCUMBERS.

Will you kindly inform me if tomatoes and cucumbers can be grown successfully, or at a profit, for a midwinter crop if the plants are set out in solid benches from 4-inch pots about September 1, in the climate of the western part of Washington state? There is not much sunshine here during November, December, January and February, which is the time we would want the crop. We can easily keep the temperature up to 80 degrees at night during the winter, if necessary, as we seldom get over 15 to 20 degrees of frost. When would it be necessary to replant for the spring and summer crop?

What are the best forcing varieties of tomatoes and cucumbers? A few hints as to the culture will be appreciated.

A. J. E.

I am sorry to say that I cannot give A. J. E. much encouragement. There is hardly a possibility that either tomatoes or cucumbers would do well enough to be profitable in that locality during the dark winter months. They would hardly get to bearing before the rainy season arrived, and there are no crops which need sunshine more than cucumbers and tomatoes. They would probably live nearly through the winter, and if the season happened to be interrupted by a little occasional sunshine the plants would produce a few fruits, but not enough to be profitable, and would more likely fail to pay running expenses.

Extra heat at night would not help, but would tend to make matters worse, as the temperature in prolonged cloudy periods should be lower than schedule, to reduce the growth to better balance up with the reduced light.

It would be more advisable to grow some crop requiring less sunshine, or even to let the houses stand empty, so as to freeze up and cleanse and purify them, and start up as soon as the weather brightened a little in February or March, thus getting a good spring and summer crop. These methods are practiced by most vegetable growers, even where conditions are much more favorable. It is noticeable that the crop is better, and grown with less trouble from plant enemies, than where a fall and winter crop is previously grown in the houses. It is rarely the case that a fall and winter crop pays, but instead it takes the life out of the soil and leaves the houses stocked with insects and disease, thereby causing considerable loss, expense and annoyance.

Nearly all large seed companies furnish good strains of forcing cucumber seed. It is hard to say which is best, because opinions differ. The condition of the season also may make a difference in the choice. The Rawson strain, now for sale by nearly all dealers, has become quite popular in cucumber forcing districts. It is a good plan for each grower to try different strains and choose for himself. The seedsmen advertising in the Review can be depended upon as thoroughly reliable and it will be well for growers to look over the advertisements in the Review before ordering of other seedsmen of questionable reputation, but always specify that the crop is to be forced inside, to insure against common stock seed.

Anglo-American Spawn Co., Kennett Square, Pa.

Mention The Review when you write.

As to varieties of tomatoes for forcing, nearly all growers have used English varieties exclusively until recently, Comet being the general favorite. It is undoubtedly the best of the imported varieties for our climate, etc. The American variety, Improved Stone, an old, reliable outdoor variety, is an excellent forcing tomato in spring. Many growers are working on other new varieties and this season's experiences may determine something interesting in varieties of forcing tomatoes. The imported varieties or so-called forcing varieties cannot compare with our American varieties in either size or quality. I venture to say that this will be the farewell season of the imported sorts.

H. T.

PACIFIC COAST.

SWEET PEAS IN CALIFORNIA.

Should the central part of California be favored this year with as mild a fall and winter as in the last two seasons, the late sweet pea crop will be one of the best paying divisions grown by raisers of hardy outdoor flowers.

It is apparent, from indications shown by the buying public again this season, that the sweet pea is to continue in its popularity for some time to come. Although the price during the month of June was low, the demand for the flowers was greater than ever, and where growers were in position to pick their crops without too great an expense the profit was good in the aggregate. The first peas sent to the San Francisco market from the open were received about April 1. These netted the growers about $1 per dozen bunches. A month later the same flowers were sold at 75 cents per dozen bunches and the June sweet peas averaged about 50 cents per dozen.

In a few weeks there will be a scarcity, as the unusual dryness of the present season has interfered to quite an extent with the blooming quality and the longevity of the vines. A great many growers depend entirely on the natural moisture of the ground, together with considerable cultivating, to keep the vines in a growing condition for several months. But when the soil is constantly tramped over in the process of picking and the weather becomes more than usually warm, then it is that the vines are short-lived and the crop is soon over. Where the peas are planted on low, damp ground the season holds longer with them, and if the flowers are kept well picked they stay in bloom many more weeks than they usually do.

Seed planted now, if kept well worked around and given plenty of moisture, will easily bloom by the middle of September, and should we have a long, warm spell of weather about that time, they will prove to be a good paying proposition. They should be encouraged to grow up from the ground by giving them plenty of brush to climb on. This is the only way to get good stems late in the season, when the nights are long and rather cool. Sow the seed deep in the soil at this season of the year, as it germinates quickly and the young plants grow rapidly when once established.

CALIFORNIA PAPER WHITES.

The demand for Paper White narcissi by the San Francisco growers is always more in evidence early in the season than it is when the flowers become more plentiful and the vast patches of them are sent to market by the bulb growers, who depend almost entirely on the rainfall to start their bulbs flowering. This has been forcibly shown during the last two years, when the price of narcissi during the height of their season was so low that it did not pay to cut and bring them to market. True, this excess usually lasts

only for a couple of weeks, but at least three-fourths of the entire yield blooms during this time.

With such valuable florists' flowers as the narcissi, there should be a greater effort made to harvest them at various times, so that they will give a succession of early or late blooms. This is easily arranged by manipulating the water supply so that the bulbs will not have to depend on the rainfall for their starting. I have had the most excellent results from early flowers by giving the bulbs several thorough soakings early in August and not allowing them to dry out again, either, during September or October. It is no trouble at all to have quantities of blooms early in November, and unless the flowers are interfered with by a possible excess of frost, the entire crop can be harvested at good paying prices before Christmas.

August is not too soon to commence soaking the ground, as the bulbs are fully grown, thoroughly dry and have had plenty of resting season by that time. When late flowers are desired, the bulbs have only to be kept thoroughly dry and not replanted until about the middle to the end of January. I refer here entirely to the Paper White narcissus, as it is the only variety grown to any extent for early flowering. G.

SAN FRANCISCO.

The Market.

There is but little change in the situation since last week. The weather has turned considerably cooler, which makes it more agreeable, both for the keeping and the handling of flowers. The rather excessive heat of the previous weeks bleached out the roses somewhat and already the change is noticed, both in the color and substance. The prices are much lower than is in keeping with profitable growing, and unless there is a general revival of trade in the near future, which no one anticipates, we can easily vote the present summer the most disastrous regarding prices in the history of San Francisco's retail flower trade.

The most satisfactory demand is for hardy outside flowers. Sweet peas, although rather past their prime, continue to be good sellers, and the same can be said of coreopsis, gaillardias and dahlias. Gladioli have not been as good paying a crop as the growers could wish, and only the lighter shades are in demand.

Lilium rubrum and album have made their appearance and are finding good sale. The best stems cost the stores from $1 to $1.50 per dozen. Longiflorums are much scarcer, being practically out of season. Valley is in fair supply and sells fairly well. For the first time this season there is a plethora of asparagus and adiantum fronds.

Various Notes.

John S. Armstrong, the Ontario, Cal., nurseryman, is in town on his way home from a visit to the exposition at Seattle, Wash.

James McHutchison, the New York importer of nursery stock, has been for several days in San Francisco, interviewing the local dealers.

J. C. Scroggs, of Sacramento, Cal., is in town.

A. W. Ward will depart for a tour of southern California in a few days.

F. Ludemann has somewhat recovered from his recent severe illness and will depart for some of the California mountain springs in a few days.

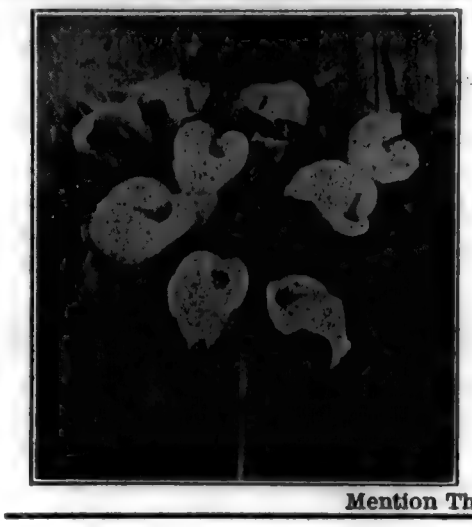
Samuel Lundy, of the Thorsted Floral Co., of Oakland, Cal., has returned from a trip to the Elks' convention at Los Angeles, Cal.

H. M. Sanborn will shortly open another floral establishment, on Shattuck avenue, Berkeley, Cal.

David Neely, one of San Francisco's pioneer nurserymen, is seriously ill at his residence, in West Berkeley, Cal.

C. E. Lilley, of Ben Lomond, the green goods man, is in town.

The Garden City Pottery Co., of San Jose, Cal., has opened a warehouse at Oakland, Cal. G.



SPOKANE, WASH.

The Market.

These are the days when people are visiting, not only for the sake of vacations and for the unusual opportunities of seeing the great northwest, but for the historical events which Uncle Sam is engineering in the Spokane, Coeur d'Alene and Flathead reservations. There is only one class which seems to be conspicuously absent, among the throngs from every state in the Union pouring into this country to register for the land openings, and that is the lady florists. It may be that while they can brave the ordeal of being measured for height and of being weighed, their courage falters when it comes to swearing to their age. We had thought better of them.

Spokane is not slow as a seat for national events. Last winter we had the apple show. Now we are having land registrations; next we shall have the National Irrigation Congress, August 9 to 14. Extensive preparations are being made for the latter event; brilliant illuminations will be one of the principal features. Later there will be the President's visit. All these will stimulate the flower market.

Garden roses are now nearly as scarce as greenhouse stock. Carnations still continue of good quality and plentiful. Sweet peas are overplentiful and of fine quality. Coreopsis has appeared in quan-

tity and some valley and Easter lilies are to be had and auratums, too. Gladioli have come to stay, one would judge, from the way they have settled down in conspicuous places.

Some wedding work is in sight for August. Little funeral work has been called for this week.

Various Notes.

The windows have shown an interesting variety in flowers and arrangement also. Miss Armstrong's display piece was a bridge of white and Enchantress carnations, with a ribbon span, and approaches trimmed with sweet peas and galax.

Hoyt Bros. Co. had for one decoration two wicker screens, halfway back to the window, set wide apart. Draperies of white silk hung between the screens. In front were Pteris tremula and pot adiantums, with a tall vase of pink gladioli on one side and a hanging twig basket of Countess Spencer peas in the other. Cocos and more ferns were grouped behind the screens. Another decoration was a group of pillows in red and white, one square and two of regulation shape. The firm has also added another decorative feature outside of its store, in the shape of a large camp-kettle filled with geraniums, vincas and lobelias. Below are planted salvias and abutilons.

A well known member of the trade recently had his occupation defined, to his evident amusement, for he told on himself. He was waiting for his car, early one morning, when along came a gentleman of the pick and spade persuasion. "Sure, and what's your job?" the stranger asked our florist friend. "I'm a florist," was the reply. "O, yis," said he of the ready tongue, "one of thim fellows what lays thim fancy floors."

The management of the Crescent, a leading department store of the city, has announced its intention of keeping the store decorated for the remainder of the summer, one week with peas, another with gladioli, another with gaillardias, followed by daisies, phlox and so on down the list. While not attempting anything elaborate, it shows an appreciation of the value of flowers for a commercial place.

Mary Tolman

A new light Salmon Pink Carnation for 1910.

$12.00 per 100; $100.00 per 1000.

We had a call this week from a representative of Marsh & Kidd Co., the San Francisco agents for John J. Crooke Co., of Chicago, who are entering this market with a line of tinfoil.

Mr. Shotwell, who is well known for his successful innovation of locating his conservatory on the Northern Pacific railway station grounds in Fargo, N. D., maintaining the bedding for the railroad premises in return for the privilege, was also here.

E. R. Chappell, with Clarke Bros., of Portland, Ore., who is full of interest and enthusiasm in his chosen work, was another visitor.

DAYTON, OHIO.

The Market.

Business in the last two weeks has gradually dropped off, until it has settled down into the same old rut where it gets every summer. There is practically nothing doing to create a demand for flowers. Carnations are gradually becoming scarcer each day, while asters are coming in as a substitute. Roses are still hanging out, in spite of the hot weather, but the quality is nothing to "crow over." The demand for lily of the valley has ceased and the growers therefore will not force them for a spell. Giganteums still hold their own and are about the only desirable flowers on the market. The weather last week was a little cooler, with an abundance of rain, for which all florists are thankful.

Various Notes.

The regular monthly meeting of the Dayton Florists' Club will be held at the J. F. Young establishment, 37 East Fifth street, August 2. At this meeting the florists will complete their arrangements in regard to attending the convention.

William Huston and family spent their summer vacation visiting relatives at Sharonville, O.

The Miami Floral Co. has finished planting its new crop of carnations; 60,000 plants have been benched, which are all in a fine, healthy condition.

Henry Ehrhart, of Sidney, O., was a visitor this week.

Mrs. Elizabeth Young has returned from a three weeks' trip to Minneapolis. She is greatly pleased with the northwest and reports a most delightful time.

Fred Jacobs, of Hamilton, O., called on George Bartholomew last week.

R. A. B.

MEMPHIS, TENN.

The Buseck Floral Co. has been organized, with a capital stock of $25,000. Otto Buseck, who has been manager for one of the local florists for three years, and who previous to that time had a long experience in the practical side of the business in the east, will be the manager. The officers are: President, J. W. Proudfit; vice-president, W. M. Ball; secretary and treasurer, W. E. Age. Others of the board of directors are L. N. Starke, A. E. Pipkin, Walter B. McLean and J. Goldsmith.

The company has not yet secured a site, but has options on several pieces of land, one near Raleigh Springs. It is planned to build modern greenhouses and also to open one of the finest flower stores in the south as soon as a suitable location can be found. Manager Buseck has secured reservation for space for a display at the Tri-State Fair.

WEST GROVE, PA.

Eugene Bernheimer, of Philadelphia, was a mid-week visitor here.

Louis Wintzer is visiting his brother, Charles, at Charlotte, N. C.

Florists about here are complaining of the ill effects of the prolonged drought on field growing carnations, cannas, etc.

M. Henry Lynch and E. A. Parker, of the Dingee & Conard Co., recently returned from a much enjoyed fishing trip to the Jersey coast.

Thomas Baylis & Son have benched a large quantity of mums. Mr. Baylis is an expert at growing this flower and expects to place some fine blooms on the market this fall.

Mushroom growers in this section are busily engaged in preparing their houses and manure for planting a fall crop.

Florists' Review

When Writing Advertisers

MINNEAPOLIS.

The Market.

Minneapolis is enjoying the finest weather on record, and about the only excitement in florists' circles is just how big a fish the other fellow caught. A few wedding decorations and funerals occasion some demand for flowers. Garden stock is plentiful, but roses are scarce.

Bowling Contest.

The Minnesota State Florists' Association's bowling contest took place the evening of July 23, at the Pfister alleys, St. Paul. The following is a list of the awards:

Team prize won by St. Paul.

O. Olson, of Holm & Olson, captured the first individual prize and also had the most spares.

Mr. Hermes, of the West Side Floral Co., received the second individual prize, and also the prize for the most strikes.

Mr. Swanson, of L. L. May & Co., was awarded the third prize.

Carl Melby, of Minnetonka Beach, drew fourth prize, and Mr. Mayer won the fifth.

In the ladies' game, Mrs. Osterhout, of the Ramaley Floral Exchange, scored highest; Miss Elsie Will, of Minneapolis, second; Mrs. Strehlow, of St. Paul, third, and Miss Distel, of St. Paul, fourth.

Various Notes.

William Desmond is about the store again, and rapidly improving.

Miss Whitted had a good wedding decoration last week. In placing it Mr. Gray injured himself somewhat, but is able to be at the store again. In the recent automobile parade, given during the visit of the Glidden tourists, Miss Whitted's automobile captured the prize. It was beautifully decorated with natural flowers and won the admiration of all.

The Minneapolis Floral Co. is cutting some fine asters. The firm's out-of-town business is fairly good.

R. A. Latham had some good funeral work last week, and he is cutting some fine sweet peas off his farm.

E. Nagel has gone to Waconia on his vacation.

Visitor: W. C. Johnson, of E. H. Hunt's, Chicago. M. E. M.

Jersey City, N. J.— John T. Withers is making an extended trip through the West. He will attend the park superintendents' convention at Seattle and return via California and Denver and stop for the S. A. F. convention at Cincinnati, in August.

BEGONIA GLOIRE DE LORRAINE

Strong, 2½-in. pot plants, leaf cuttings, $15.00 per 100; $140.00 per 1000.

Ferns in Flats

Ready for delivery after July 15

Each flat contains 100 clumps of small plants which can be divided in 3 to 5 plants accordingly, all ready for potting.

We can furnish these ferns grown separately, each flat containing any one of the following sorts, ferns all good salable varieties:

Aspidium tsussimense,
Cyrtomium falcatum,
Pteris adiantoides,
cretica alba lineata,
cretica magnifica,
hastata,
Mayi,
Gilberti,
serrulata,
serrulata cristata,
serrulata variegata,
Wimsetti,
Mixed Varieties.

Price, $2.00 per flat.

FERNS IN FLATS.

KENTIA, 2¼-in. pots, $9.00 per 100, $75.00 per 1000. COCOS, 2¼-in. pots, $9.00 per 100, $75.00 per 1000.

Begonia Gloire de Lorraine We are headquarters for this sterling plant.

This is decidedly one of the most beautiful and profitable plants introduced in many years. It attains a height of 15 to 18 inches, bears pea green foliage and is fairly smothered with a profusion of soft pink flowers. It is naturally of a compact, bushy form, and blossoms continuously from October to April, making an ideal plant for Christmas decoration. No establishment, large or small, is complete without this begonia.

From 2½-inch pots, for delivery at once. Doz., $2.00; 100, $15.00; 1000, $140.00.

Stumpp & Walter Co. 50 Barclay St. New York

Mention The Review when you write.

POMPON MUMS

For the retail grower this class of mums often proves more profitable than the large ones. They can be used in so many ways to advantage, where large blooms would be out of place. We have a fine lot of young plants ready to bench. Grow them in sprays, 12 to 15 sprays to the plant.

Diana, Savannah, Zenobia, Baby, Acto, Alena, Shishar.

We also have fine plants of **Dr. Enguehard, Minnie Bailey, Mlle. J. Rosette,** and a few others. $2.50 per 100; $20.00 per 1000.

BAUR & SMITH, 38th St. and Senate Ave., **Indianapolis, Ind.**

Lager & Hurrell, Summit, N. J.

COLUMBUS, OHIO.

The Market.

Trade is quiet, with some funeral work now and then to help keep our hands in practice. Stock is in fairly good shape for this time of the year. Carnations are scarce, as nearly all of them are thrown out now and everybody replanting. What few come in find a ready sale.

Some good Bridesmaids are coming in. There are few other roses at present, outside of Maids. Gladioli are quite plentiful and sell fairly well.

Sweet peas are about done for, as the heavy rains and hot sun have put them to the bad in short order. There are calls for them right along, but there are none to be had. Asters are coming in quite plentifully at present and it is doubtful how we could get along without them, with other stock so scarce. There are still a lot of lilies coming in and they are in good condition. There has been a good demand for ferns, etc.

Various Notes.

The Florists' Club picnic, at Buckeye lake, July 21, was a great success. Three chartered cars started from Columbus at 8 a. m. and left the lake, returning, at 8 p. m. There were races for boys, girls, men and women, and there were some good sprinters among them. They say some had practiced for a couple of weeks to get their wind in shape for the contest. The three-legged race was most amusing, as some of the sprinters could not get their feet going at the same time. The sack race was the best of all, and about ten went in for it. There was some tall jumping and only three finished. They were I. D. Seibert, Jacob Reichert and Lee Mathews. There was boating, fishing and dancing and all present seemed to enjoy themselves.

The Fifth Avenue Floral Co. is sending in some good Maids and a good lot of asters.

Gus Ackerman is cutting some good roses and fair carnations.

I. D. Seibert and family, with a party of friends, are spending a couple of weeks at Buckeye lake. Wait for the fish stories. J. M.

Mt. Clemens, Mich.—James Taylor has opened a downtown store at the corner of New street and North Gratiot, in the room recently occupied by Waltzer & Ullrich.

Please omit my advertisements of vincas and dracænas, for they have sold them all.—Dana R. Herron, Olean, N. Y.

Godfrey Aschmann, the Araucaria King

Is More Active than Ever

Four Houses Filled with the Best. With What? Sure, with ARAUCARIAS, His Specialty

Empty houses! That won't do. What shall I plant? What is the most profitable? Listen to what your neighbor florist has to say. Mr. McGinty to George Know Nothing: "I filled a reasonable portion of my greenhouses last year with Godfrey Aschmann's Araucarias, and I tell you straight out I was only sorry I did not buy more. In two weeks, just when the demand was the biggest, my stock was nearly exhausted. This year I shall be smarter. Last week my order to Aschmann called for just double the amount. I never can lose anything on such an investment as that. Every dollar put in Araucarias yields three to four times the value while we're asleep."

We are one of the largest importers of these well-known and beautiful evergreen decorative plants, the **Araucaria Robusta Compacta, Excelsa Glauca and Excelsa.**

Florists should bear in mind that no home, garden, lawn, etc., is complete without the Araucaria; therefore, if you wish to make money, recommend the Araucaria to your customers. Introduce this noble plant to your trade. We give you a special price, and it will pay you to handle them.

Araucaria Robusta Compacta, Glauca and Excelsa. Our reputation of being one of the largest importers and shippers of this beautiful evergreen decorative plant is so well known, dating far back into the 19th century, that our name, as well as the Araucaria itself, shall never die out, and is still fresh in people's minds, same as when we first started. Why the Araucaria is so popular is because it is an ancient plant, kept by Greeks and Romans as a special favorite in their household, as a good omen.

Araucaria Robusta Compacta and Excelsa Glauca, new importation, 3 tiers, 3-year-old, $1.00, $1.25 and $1.50.

Araucaria Robusta Compacta, specimen plants, 7 to 8-in. pots, 4 to 5 years old, 3, 4 and 5 tiers, 20, 25 and 30 inches high, same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa Glauca. This is a beautiful blue variety, very graceful and beautiful. Specimen plants, 6-in., 7-in., 8-in. pots, 4 and 5 years old, 4, 5 and 6 tiers, 20, 25, 30 and 32 in. high, same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa, 3, 4 and 5 years old, 4, 5, 6 and 7 tiers, 6-in. pots, 20, 25, 30 and 35 in. high, an Elephant for only 75c; a Jumbo for $1.00 and a Holy Terror for $1.25 to $1.50.

Araucaria Excelsa, April (1909) importation, 2 to 3-year-old plants, 5, 5½ to 6-in. pots, 3, 4 and 5 tiers, 12, 14, 16 to 18 in. high, 35c, 40c, 50c, 60c to 75c.

Sago Palm, or Cycas Revoluta, 5½, 6, 7 and 8-in. pots, from 5 to 20 leaves to a plant, 10c per leaf.

Kentia Belmoreana, 4-in., 18c, 20c to 25c; 6 to 7-in., 6 good leaves, 75c, $1.00, $1.25 to $1.50.

Kentia Forsteriana, 8-in. pots, made up, 1 large, 4 ft. high in center, with 3 small around, price $4.00; single plants, 6 to 7-in. pots, 30, 35, 40 to 48 in. high, $2.00, $2.50 to $3.00.

Areca Lutescens, 4-in., made up of 3 plants, 25c.

Cocos Weddelliana, 3½-in., 18 to 20 in. high, 20c to 25c; 3-in., 15 in. high, 18c.

Ferns. Nephrolepis Whitmani, Todeaoides and Boston, 5, 5½ and 6-in. pots, 35c, 40c, 50c. Whitmani, large, 4-in. pots, fit for 6-in., 25c.

Adiantum Hybridum, very valuable for cutting, 6-in. pots, 25c, 35c, 50c.

Asparagus Plumosus Nanus. 2½-in. pots, $3.00 per 100; 4-in. pots, $10.00 per 100.

Asparagus Sprengeri. 2½-in. pots, $3.00 per 100.

Dish Ferns. Best assortment, 2½-in. pots, $3.00 per 100.

Jerusalem Cherries. We offer the best, new improved variety, already laden with large, orange-colored berries, 2½-in. pots, $5.00 per 100.

Begonia Gloire de Lorraine a specialty; also own new improved strain, introduced last Xmas is still well in the minds of florists. We have both the deep pink and the light pink variety (Lonsdale), 4-in. pots, 30c.

Scarlet Sage. 4-in. pots, $6.00 per 100.

All goods must travel at purchaser's risk. Cash with order, please.

Please state if you want stock shipped in or out of pots.

White Marsh, Md.

JULY 24, 1909.

DEAR SIR:

It occurs to us that you may have under consideration the revising of your catalogue list of Geraniums, Cannas or Dahlias, but the difficulty is, where are you to secure the stock to fill your orders without having to wait a year to work it up?

Do you know that we can suggest a list that is right up to date, and that we can furnish the stock, and that any order you may place with us you may depend on being filled to your entire satisfaction, and that we are prepared to propagate these specialties in large quantities, and that our collection will compare favorably with any in the country, for there are few equal and none better?

You know where we stand on the Geranium propagation, but thought perhaps you did not know that we grew Cannas in 3-in. pots extensively, and that we have some 200,000 Dahlias planted out, and that we never had a better prospect for a splendid crop of roots; and then we have 70,000 Dahlias in 3-in. pots, nice roots for mailing. Besides this we grow a general line of Bedding stock and are making interesting special prices for next season. We extend a cordial invitation to all interested to visit us. If you cannot come, will you kindly write us what your probable requirements will be?

Respectfully yours,

R. Vincent, Jr., & Sons Co.

BULBS.

BULBS. THIS ADV. IS OUR DRUMMER. We certainly have got them, and they are O. K. in size and condition, owing to cold and damp spring. And the prices are right, delivered to you at 50% below Dutch bulbs, and, being acclimated, flower ten days sooner. They are true, sound, clean, dry, healthy, selected stock. A postal will bring you all details as to varieties to plant or force, with cultural directions.
D'ALCORN,
The Southern Daffodil Farm, Portsmouth, Va.
Where the fine Emperor comes from.

Home-grown narcissi, tulip and other bulbs. Have you received our "Special Offer" on the above named bulbs for fall delivery? If not, better write for it. Remember we grow more narcissi bulbs than all other southern growers put together. We offer an especially fine stock of Narcissus Emperor.
Hubert Bulb Co., Box 100, Portsmouth, Va.

Winter flowering bulbs now ready. Oxalis, 5 varieties, red, white, pink, yellow and lavender; and freesias, white and red. 1000 by mail, $4.00; small bulbs for growing on, $1.25 per 1000. SPECIAL OFFER—700 bulbs, 100 of each, for $2.75.
George Leaver, Box 549, Los Angeles, Cal.

HOLLAND BULBS. A complete line of healthy, well-grown, well-graded bulbs for fall delivery from Van Til-Hartman, Hillegom, Holland. Price list and full information from Jackson & Perkins Co., Newark, New York, Sole American Agents.

C. F. Mahan, R. D. No. 8, Dayton, Ohio.

COBURN'S SELECTED PANSY SEED.
BEST MARKET STRAIN GROWN.
Our seed is saved from about 12,000 plants, carefully selected, when in bloom, from the 500,000 we grow for our spring sales.
Each plant is carefully selected, color, size, form and substance being taken into consideration, and the proportion of each color is properly balanced.
As a result of over 25 years' work along these lines, we feel justified in claiming to have the best strain of pansies on the market, and we invite trial and comparison.
Growing our stock in this manner, we have only a limited amount of seed to spare, and in order to distribute as widely as possible, we offer it in packets of 1,000 seeds. Price $1.00 per packet (only one to each customer).
I. E. COBURN, 291 Ferry St., Everett, Mass.

Grow 200 plants, eliminate 199, keep 1. Save the seed from that plant. Continue this yearly for 15 years and you will have pansy seed. That's what we've done. 1800 seeds, $1.00.
Steele's Giant Pansy Gardens, Portland, Ore.

Seed packets and bags. Catalogue, clasps and commercial envelopes, printed or plain. "If it's a Spangler bag, it's a good one." Estimates furnished.

GEUM MONTANUM.

An excellent border or rockery flower is the mountain avens, Geum montanum, the bright golden flowers of which come in early summer and, in favorable positions, continue for months at a stretch. The plant itself is a beautiful one, the foliage being of fine form, and in the highest degree pleasing, with its pretty shade of green and its charming contour, although the latter is what descriptive works are pleased to call "irregular." The irregularity is a charm in the case of these leaves, which, by the way, are also clad, to some degree, with soft hairs.

There are several varieties of Geum montanum, some being much neater and more compact than others. Neatness is of consequence when it is employed as a rock plant, but there is hardly a weedy variety of this mountain avens on the market. The best and dwarfest varieties with which I am acquainted, says S. Arnott, in an English gardeners' magazine, are only some six inches in height. The flowers are of a bright golden-yellow, but there is a variety with orange-colored flowers, which is of much beauty. It is called G. montanum aurantiacum, and is in every way as worthy of cultivation as the golden one. It is of about the same height.

There is still another good variety, called maximum, which is taller, and thus better for the border than the others, although it can well be cultivated on the rockery. Its height is about nine inches, or a little more, and those who prefer a taller geum than the two first named may secure this one.

The mountain avens, although not particular regarding soil, appears to like one which is not too heavy, but which has still a fair amount of moisture. On the rockery the moisture is conserved by the stones, and there it seems happiest, giving its bright yellow flowers, not only profusely, but of good size. It is propagated by division or by seeds, and is with me one of the best plants I have, says Mr. Arnott, although far from being rare.

BAR HARBOR, ME.—The second annual Mount Desert flower show has been set for August 14, at the Building of Arts, to be held under the schedule of the Bar Harbor Horticultural Society

AUSTIN, TEX.—Seiders & Walker are building two new houses, 22x100, one for mums and later bedding stock and the other for carnations. A lean-to, 14x42, and a propagating shed, 6x50, will also be added, making this one of the most complete plants in this section. Olaf Olson, of the Austin Floral Co., is adding one house, 24x75, for mums and sweet peas.

PLATTEVILLE, WIS.—Wm. A. Schaefer, of the Platteville Floral Co., stated July 19 that his new greenhouse would be completed in a few days and his carnations housed. Gladioli and asters, he said, were blooming outdoors and were selling fairly well. Business, on the whole, has been better than he expected, and he thinks that the florists' trade is now established on a paying basis in southwestern Wisconsin, though considerable hustling was required to produce that state of affairs. There were no greenhouses here until about two years ago. Trade is nearly all of the better class.

INDIANAPOLIS.

The Market.

There is but little change in the situation, business still being dull. The stock is fair for the season, roses suffering the most. Carnations are holding their own. There are some few asters to be had, but they are not at their best yet. Lilium auratum has made its appearance and helps materially in funeral work. There are quantities of Shasta daisies, gladioli and green stuff to be had. Vacations are now in order and everyone is taking his turn in going away. A funeral or party here and there is about the only excitement.

Various Notes.

John Heidenreich and wife are spending a fortnight in Minnesota and Chicago.

Walter Bertermann and Carl Sonnenschmidt are contemplating a trip to Germany.

While out automobiling the other day, George Wiegand experienced the sensation of being hit by a street car. Outside of tearing the top off, bending the rear axle and tearing the back seat off, no harm was done to the auto. Luckily, the car was not going over ten miles an hour and no one was hurt.

Clarence Green is back to work, after two weeks' vacation.

Homer Wiegand is spending a few days at the lakes.

G. C. Lange is rebuilding a number of his houses.

E. A. Nelson is trying his luck with the finny tribe at Lake Webster.

Roepke & Rieman have completed a pot shed, packing room and cut flower cellar.

Fred Hukriede is spending a few days with relatives near Fort Wayne.

Henry Backemeyer, A. Wiegand & Sons' bookkeeper, who is a popular tenor singer, went to Knightstown last week, where he took the leading part in a recital given in his honor.

H. L. W.

Greenhouse Heating.

THE REVIEW will be glad to answer in this column any questions with regard to greenhouse heating.

CAPACITY OF BOILER.

I am figuring on building another greenhouse and would like to know how much more my boiler will heat. My present house is 20x60 feet. My boiler is a tubular upright and the part that contains the water is 3x7 feet and three inches in diameter. I use hot water. I am located in northern Texas.

J. L. D.

I should say that your boiler will carry two more houses 20x60 feet and do the work well. G. T. E.

AN ILLINOIS ROSE HOUSE.

I have a rose house piped with 3-inch pipe for hot water, with a flow and two returns underneath each bench, except the north side bench, which has one flow and one return. It is heated by a return flue steam boiler of ample size, but somehow the system has not worked well. The flows are taken from a main running

across one end of the house. They slope upward to the farther end and connect with the returns, which slope downward back to the main return, which is immediately under the main flow.

Could I not use it just as it is for steam? Or would it work better were I to raise the main flow so as to have all the pipes slope downward? If it will work either way, would I not have too much radiation? Would one flow and one return of 3-inch pipe be sufficient?

J. Y. L.

You could not use your system for steam, as the pipes are too large; one 3-inch steam pipe will carry about 2,000 feet of 1¼-inch pipe, or ten pipes in 200 feet of circulation. You had best lift the far end of the main flow so that it will pitch toward the boiler. Do not raise it too high; a pitch of three inches in 100 feet is all right. See that the pipes are free from dirt outside and inside. The radiation you can cut down by running a slow fire. G. T. E.

AN UNDERGROUND FLOW.

I have a greenhouse 16x96 and three and one-half feet to the eaves. It is 125 feet northeast from the boiler and runs north and south. There is glass in both ends. There is a gradual grade of one foot from the north to the south, the north end being the higher. The south end is a foot above the top of the boiler. Can I carry the flow and return underground 125 feet and heat the house?

The flow will have a gradual rise till it reaches the north end of the house. There will be an east and south house alongside the boiler shed, and fifty feet of the flow pipe for the north and south house will go under the east house, about four feet deep. I have been heating the north and south house with a flue, but not very successfully.

The last twenty-five feet before entering the greenhouse will cross the street at a depth of six inches. How can I protect this pipe from losing heat? The other 100 feet will be four feet underground. I am thinking of putting it through tile. Will 2½-inch pipe be large enough or had I better use 3-inch? I am located in Ohio.

I do not want to put a boiler in the north and south house, on account of my neighbors objecting to the smoke.

J. L. M.

The flow and return for the north and south house can be run underground to the best advantage. To protect this pipe from weather and loss of heat, put on one thickness of asbestos paper and about fifty thicknesses of newspaper; then take some grain or fertilizer bags and sew them on over the paper. Give this a good coat of thick whitewash and slide on the tile pipes. Make the joints tight with cement to keep the water out.

I should advise the using of a 3-inch flow and return, as the friction is not so great as in a 2½-inch. G. T. E.

KNOCKING OF THE PIPES.

I have a greenhouse, 21x110, used for growing lettuce. It stands north and south, and is even-span. It measures eleven feet to the ridge, and its side walls are four feet high, with sixteen inches of glass. The south end is glass; the north end is protected by the boiler room. I built the house last fall, without having any previous experience in greenhouse building or heating. I used the hot water system. I have a common steam boiler, with thirty 2-inch flues five feet long. The firebox is two feet eight inches deep, twenty-two inches wide and two and one-half feet high. The steam dome is fifteen inches in diameter and fifteen inches high.

I ran a 4-inch pipe from the top of the steam dome up twelve feet, then on a slope down under the ridge to the south end of the greenhouse, giving it two feet of fall in 110 feet. There I split it into three two-inch pipes (each with a valve), which feed four 1½-inch returns under each outside bench and three 1½-inch returns under the center bench. I gave the returns two feet of fall till they reached the boiler room, thence into a 4-inch pipe which dropped seven feet to the bottom of the boiler.

My evaporation tank is a 40-gallon barrel, which is about three feet higher than the highest point of the riser. For this I used a ¾-inch pipe, which enters the boiler about six inches from the return, but on the same level. There is also a ¾-inch pipe from the top of the riser, emptying into the barrel.

Now, I had no trouble last winter in heating the house. When it was 22 degrees below zero, a fire at bed time and one at 2 o'clock in the morning were

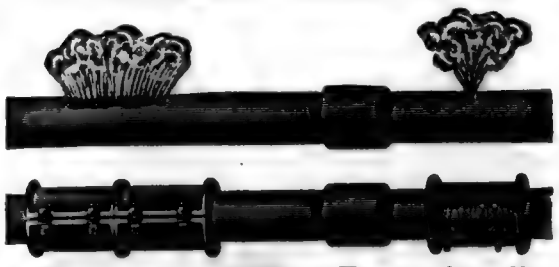
Let Us Overhaul Your Greenhouse Heating System Before the Fall Rush

Don't wait until you need heat in your greenhouses, to know if your plant is in condition to give it to you. Better let us look over your entire heating system now, repair or replace your boiler if necessary—put in new pipes, headers and so on—in other words, give it a thorough overhauling. You then take no chances of a breakdown and a frozen up house.



We know how to do it—have been doing it for over forty years—the oldest Greenhouse Heating Engineers in the business.

sufficient, with the draughts all tight. Sometimes, when we would fire too heavily, the water would force back and out of the evaporation tank. With the valves in the south end of the greenhouse closed and a very hot fire, the pipes would "knock" as though struck with a sledge hammer. What causes the "knock" and why does the water force back out of the evaporation tank?

I am building another house of the same size, and the two will be connected. Are my riser and return large enough for both houses, or will I have to tap the boiler again? Would two 2½-inch flows be better than a 4-inch? Should all flows and returns in both houses have the same grade? The houses being connected, how many returns should I have in each house? How many houses of this size can I heat with my boiler? I am located in Montana. W. E. G.

The "knock" you speak of in your interesting letter is caused by the boiler making steam. This also causes the water to blow out of the expansion tank. The hard firing heats the water to a boiling point before it has time to circulate, thus causing steam in the boiler strong enough to push the water out of the expansion tank. The steam, coming in

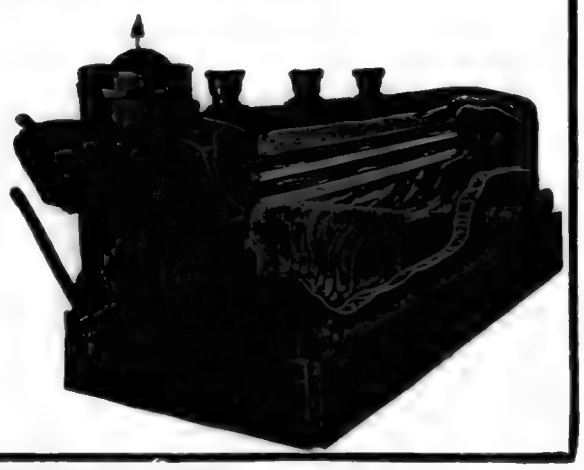
INSTALL A

"DETROIT" Return Trap

AND YOU BUY A GUARANTEE

It takes 90 to 120 lbs. of steam per horse power to operate an ordinary boiler feed pump. "Detroit" Return Traps require only about one-tenth that amount. Why not save the nine-tenths?

Write us size of boiler and number of square feet of glass in your greenhouses, for our proposition.



Address Dept. F.R., AMERICAN BLOWER COMPANY DETROIT, MICH.

contact with some of the water, causes the knock, known as a water hammer.

You have a good system, and I would say that you can connect the other house to the same flow and return, using the same number of pipes as in the older house. You may not have to run one or two, but you have them if some of the others go out of commission. G. T. E.

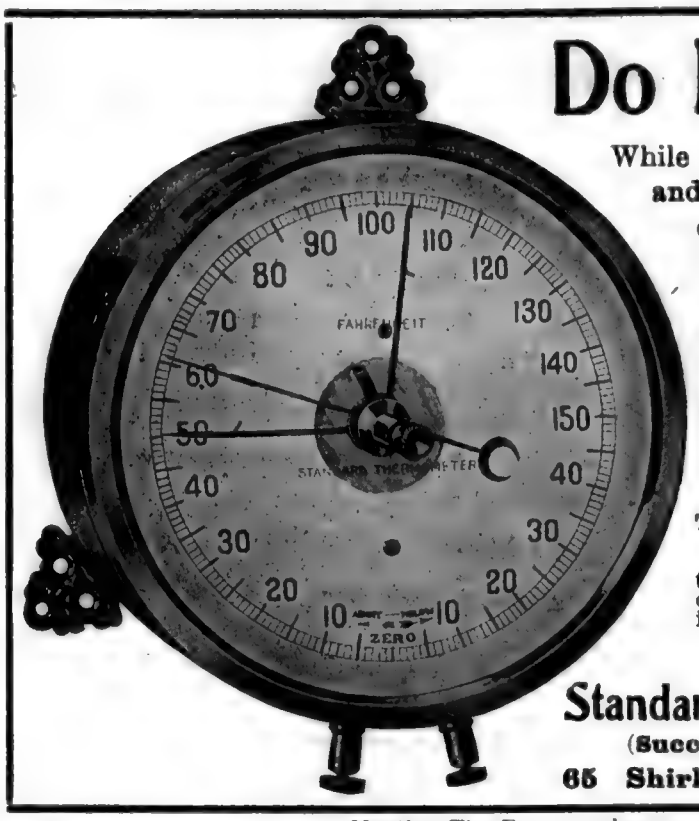
HEAT FOR A SHOW ROOM.

We are building one even-span, wood-frame greenhouse, 24x63 feet, five and one-half feet from the foundation to the gutters and fourteen feet to the ridge. There will be two lines of posts running the length of the house, under the purlins. There will be two feet of boarding at the bottom of the house all around, with glass above. There will be double doors at each end. The house runs north-northeast and south-southwest. It is intended as a repository and showroom for a large collection of general house plants, large and small, choice and common. Hot water will be used for heating. The furnace will occupy an independent house at one end, and only a few feet away. Our coldest weather in this part of Oregon is 6 degrees below zero and we wish to be fully prepared to overcome that, and a little more if the occasion should occur.

Please state how many flow pipes it is best to use, their size, and where best placed; also the size and number of return pipes. These return pipes will be arranged in manifold fashion, around the end and sides and upon the two feet of woodwork below the glass. What temperature should be maintained in winter in such a house as this for the best all around results? I. I. S.

I would put in a 4-inch flow from the boiler to the greenhouse, there divide into three 2-inch flow pipes to run around the house as far as the door, and then bring them back, as returns, under the flows to the main (4-inch) return, piping both sides of the house the same. I should think about 60 to 65 degrees would be the temperature for best results.

G. T. E.



WABASH, IND.

The Conner-Ulsh Floral Co. has signed a lease for the south side greenhouses, which are owned by Hubert Haftenkamp, of Grand Rapids, Mich. Mr. Haftenkamp had owned the establishment, while his brother-in-law, Frank Goebel, conducted the business. The latter recently took charge of Falls cemetery and since then has not been able to give sufficient attention to the greenhouses. For this reason the lease was made.

The Conner-Ulsh Co. has leased the place for five years, with the privilege of purchase. Mr. Conner, the chief owner of the Conner-Ulsh business, stated that the property will be thoroughly improved and placed in splendid condition. His company had intended to enlarge its north side space, as there is not sufficient room. This lease makes this unnecessary.

Calvin Ulsh, brother of Alonzo Ulsh, the junior member of the firm, will manage the south side branch.

ENCLOSED you will find a check for the renewal of my subscription to the REVIEW. I let it run out a few weeks ago and I have missed the paper very much. I think it is the best trade paper published.—H. C. HOLMES, Morristown, N. J.

Florists' Review
When Writing Advertisers

BALTIMORE.

The Market.

The good old summer time is here, with all the hot weather frills, thunder storms and other fixings that belong to this season. Business is down to about its lowest ebb—a little doing here and there all the time, but not enough to pay expenses. The weather has been almost overwhelming and the plants have often looked thirsty. Fortunately, we are having a few showers; otherwise our plants would burn.

Asters are surely slow in coming into bloom, so also is Golden Glow. Dahlias are arriving fairly well, but with rather short stems. Carnations are still coming in, but are poor. Roses are in fairly good supply, especially Cochets. Phlox are more plentiful. Gladioli are showing up well.

Various Notes.

The convention is now the main topic. Quite a number are going, with some still on the fence. The delegation from this city is likely to reach thirty or more, which will not be so bad, considering the long journey.

R. A. Vincent is to attend the regular meeting of the Gardeners' and Florists' Club and make some remarks in regard to the trip to Cincinnati and the railroad accommodations. The fare is $13.50 each way, from Baltimore, on either the Pennsylvania or the Baltimore & Ohio railroad. For a party of ten traveling together on one ticket, the rate will be $11.10 per capita. Pullman $3 extra in each case. The Washington delegation is expected to travel on the same train, which will be over the Baltimore & Ohio, leaving Baltimore on Monday, August 16, at 8 a. m. Q.

MOLINE, ILL.

Contracts to erect the Staack greenhouses on a 12-acre tract, bought early in the spring, a quarter of a mile east of Watertown, have been awarded. Including the cost of the grounds and the money that will be expended in buildings, it is roughly estimated the Staacks will spend $20,000 in developing their business so as to enable them to branch out from retailers to wholesalers.

There will be a brick boiler-house 34x60. There will be a separate building for a pumping station to supply water for the greenhouses. Either four or five houses will be erected, and a modern residence is also to be built.

NEWPORT.

The faithfulness of John T. Martin, gardener for thirty-five years to the late Mrs. John Carter Brown, has been rewarded by Mrs. Brown's daughter, Mrs. William Watts Sherman, who has installed old John and his family in one of the prettiest of the smaller cottages in Bellevue avenue, that thoroughfare de luxe of Newport. In all the thirty-five years Mr. Martin never missed a day's work. Mrs. Sherman, the daughter, was deeply touched by Mr. Martin's devotion to her mother, and said, before Mrs. Brown died, that he should be assured of a home and a comfortable income as long as he lived.

The premium lists for the fall show of the Newport Horticultural Society have been distributed. The show will be open for three days, the same as last year, as well as on Sunday, when the public will be admitted free, the dates being September 18 to 20. A new feature that has been introduced is that the best seedling dahlia on exhibition will, if considered worthy, be awarded the society's medal, whether entered in the medal class or not.

The greenhouses of the John Hodgson estate, which were sold recently to John Nelson, have been rented to Oscar Schultz. They contain about 35,000 square feet of glass. Mr. Schultz already has extensive greenhouses and nurseries on Houston avenue and a retail store on Broadway.

William Jurgens and wife, of New York, were here July 22, leaving for home by way of Providence. He was on a visit to his greenhouses here and reports that his chrysanthemums are in fine shape and will be ready to cut in a few days. The entire lot will be cut exclusively for the New York market.

Mention The Review when you write.

Buckskin Greenhouse Hose

¾-inch, 15c per foot, coupled, f. o. b. Detroit.

Furnished in continuous lengths of 500 feet, without seam, joint or connection, in ½ and ¾ inch sizes only. An exceptionally high-grade Florists' hose; with a double woven jacket insertion instead of cotton duck, and with specially selected rubber in the inner tube and cover.

The double woven jacket construction makes a stronger hose than can be obtained from cotton duck, and absolutely precludes the possibility of cover opening at seam—a common cause of failure of garden hose made on cotton duck. This construction also gives a more flexible hose and reduces the possibility of kinking.

Buckskin Hose is guaranteed to stand a pressure of 500 pounds per square inch, although its bursting pressure is far in excess of this.

KENNETH ANDERSON MFG. CO., Detroit, Mich.

Address The Horticultural Printing Co.,
BURNLEY, ENGLAND

Always mention the Florists' Review when writing advertisers.

DECIDEDLY IMPORTANT
If You Westerners Want to Save T I M E

SEND your inquiries direct to our Chicago office, Rookery Building, and Mr. Sykes can then give them attention at once. You see, some of you forget that we now have this Chicago branch, and write either direct to our factory at Irvington, N. Y., or to the New York office. Your letter is then mailed back to Mr. Sykes, which you see means at least two or three days' unnecessary delay before you get an answer.

Everything west of and including Cleveland, is handled by the Chicago office.

Lord and Burnham Company

New York
Boston

IRVINGTON, N. Y.

Philadelphia
Chicago

Mention The Review when you write.

We can supply in any size or length and in car loads or any quantity

PECKY CYPRESS

The Ideal Lumber for Greenhouse Benches — MOST LASTING—LEAST EXPENSIVE

When ordering your other building material it is wise to add enough Pecky Cypress to make the shipment a car lot and so take advantage of lower car load freight rates.

Write to us for prices.

THE FOLEY MFG. CO., 26th and Western Ave., CHICAGO

Mention The Review when you write.

Use The Wolf Roller Bearing Ventilating System

Operates, uniformly, 200-ft. houses from the end; most powerful and labor-saving machine on the market.

Send for estimates and references.

THE WOLF MACHINE CO., Dayton, O.

THE GRANITE STATE MOWING MACHINE CO.

HINSDALE, N. H., U. S. A.

Manufacturers of Granite State Lawn and Field Mowers, Capitol Trimmers and Specialties for Garden and Cemetery use.

Always mention the Florists' Review when writing advertisers.

The Weekly Florists' Review

is printed Wednesday evening and mailed early Thursday morning. It is earnestly requested that all advertisers and correspondents mail their "copy" to reach us by **Monday or Tuesday** at latest, instead of Wednesday morning, as many have done in the past.

THE RETAIL FLORIST.....

ORIGINALITY IN DESIGNING.

Dreams of Artistic Beauty.

The best designers find that their best work has been accomplished by means of practical experience combined with quick thought along different lines. The flower business is like a great many other sorts of business in this way, that there have been rules and regulations created in past years which nearly all designers have followed, but we find that ideas of a new, artistic nature have always been created by means of a quick act of the imagination or a so-called dream. By this I mean that the man who has always confined himself to one special way of doing this or that design, and has no natural love of beauty and naturalness, cannot see these so-called dreams of artistic beauty.

I have always found that a designer must not only be able to study his work closely, but must also have an extraordinary taste for everything beautiful or artistic, wherever he finds it, whether in the flower business or elsewhere. In each thing of beauty he may find something that will be helpful to him in the artistic line.

The Demand for New Ideas.

There must be a natural instinct in a designer in order to win success, and that instinct must be taken care of and trained like a child. Thus, as the designer's experience increases he may see new dreams of beauty. I think there should be more of a desire to create new designs and artistic features in all kinds of work, as the times are changing fast and we find that what the up-to-date people are looking for is something that is beautiful and at the same time unusual—something different from what has heretofore been offered to them. All florists ought to be able to give this more thought, as the time is coming when only the up-to-date store will have a chance for existence and the designer who has not formed the habit of creating new ideas will not have a place in the flower world.

The public today demands something in the way of design work that is more unique, characteristic and original. We may ask how we are to give the public this. Only by solid, persistent thought and sincere love for the work. The man that can give this work his entire thought may always have something new to offer his customers and then these customers will always look for that one man when they need anything.

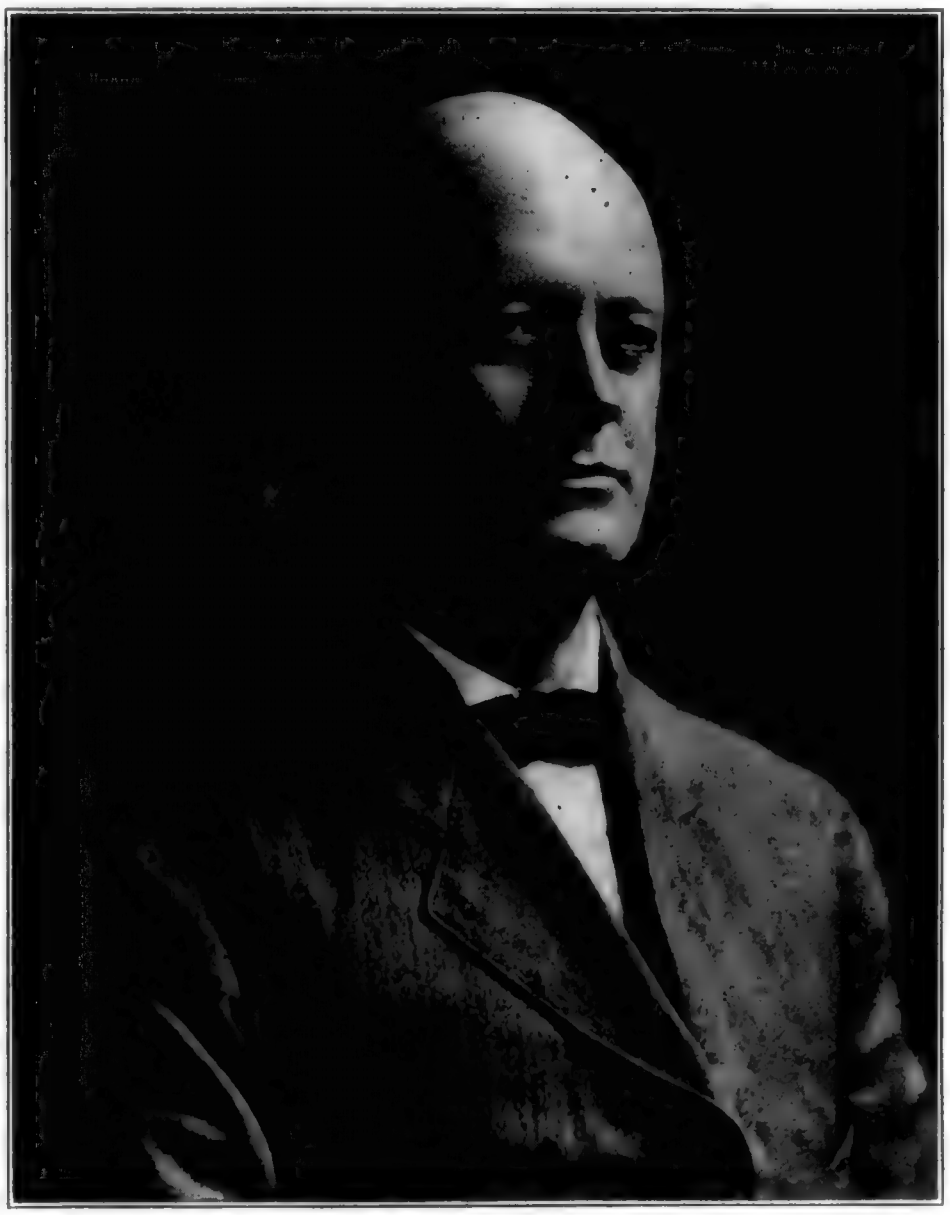
There is a great deal of trade lost in our business when we do not study our customers. We should study them at every opportunity, and we should try to win more of their confidence and friendship in a business way, so that when they do favor us with their patronage they will know that we are giving each order our best thought. We should not try to force our way too much on them, but should more or less lead them up to it and have them know that we are really offering them a good thing.

Getting Suggestions from Customers.

The general run of flower buyers today are not in a position to know just exactly what they want, unless they have given the floral art some study, but designers find that every customer has some natural instinct for flowers. By getting some of such a customer's ideas, though they may seem odd to us in some cases, and then combining these ideas with our own, we may find that the result is a good, well planned design, which excels anything that we could have devised without the aid of the customer's suggestions.

There are a great many so-called artists, painters of pictures, whom we have to deal with as customers, and they come to us with their ideas and try to influence us into their way of thinking. But in a great many cases, though they may be good painters of pictures, they have no true conception as to the proper arrangement of natural flowers. They have not the right idea as to the mechanical part of our work, but they want to subject the florists' art to the same rules as their own. Still it is better, if possible, to "take in" all their ideas, as by so doing we sometimes catch something that is of great value to us.

There are various ways of looking at our work and at the class of trade which we have to handle, but let me repeat emphatically, in closing, that designers will have to be more up-to-date and give a great deal of time and thought to their work, as the world is pushing on and the flower business needs all the resourceful, successful men that can be obtained.



H. NICHUALS.

SOMETHING DIFFERENT.

Occasionally it is possible for the designer to put into his work the little personal touch or the "something different" that is likely to be pleasing.

A fan-shaped, flat spray of Shastas, backed by Adiantum hybridum, finished at its base by an especially large single flower in place of ribbon, and a bunch of some five or six black pansies added, with the card about halfway up one side, may be said to strike the keynote of sympathy as a funeral bouquet. Five or six dozen Shastas were used, having the smaller flowers at the flaring ends. Branches of the bridal wreath (not in flower) made a firm but airy foundation, being almost covered with the fern.

Black pansies are a possibility, both the velvet and the dull. One must judge

William Murphy.

THE RETAIL FLORIST.....

ORIGINALITY IN DESIGNING.

Dreams of Artistic Beauty.

The best designers find that their best work has been accomplished by means of ideal experience combined with quick thought along different lines. The flower business is like a great many other sorts of business in this way, that there have been rules and regulations created in the years which nearly all designers have followed, but we find that ideas of a new, artistic nature have always been created by means of a quick act of the imagination or a so-called dream. By this I mean that the man who has always confined himself to one special way of doing this or that design, and has no natural love of beauty and naturalness, cannot see these so-called dreams of artistic beauty.

I have always found that a designer must not only be able to study his work closely, but must also have an extraordinary taste for everything beautiful or artistic, wherever he finds it, whether in the flower business or elsewhere. In each thing of beauty he may find something that will be helpful to him in the artistic line.

The Demand for New Ideas.

There must be a natural instinct in a designer in order to win success, and that instinct must be taken care of and trained like a child. Thus, as the designer's experience increases he may see new dreams of beauty. I think there should be more of a desire to create new designs and artistic features in all kinds of work, as the times are changing fast and we find that what the up-to-date people are looking for is something that is beautiful and at the same time unusual — something different from what has heretofore been offered to them. All florists ought to be able to give this some thought, as the time is coming when only the up-to-date store will have a chance for existence and the designer who has not formed the habit of creating ideas will not have a place in the flower world.

The public today demands something new in the way of design work that is more unique, characteristic and original. We often ask how we are to give the public this? Only by solid, persistent thought and sincere love for the work. The man who can give this work his entire thought will always have something new to offer his customers and then these customers will always look for that one man when they need anything.

There is a great deal of trade lost in the business when we do not study our customers. We should study them at every opportunity, and we should try to learn more of their confidence and friendship in a business way, so that when they favor us with their patronage they will know that we are giving each order our best thought. We should not try to force our way too much on them, but should more or less lead them up to it and have them know that we are really offering them a good thing.

Getting Suggestions from Customers.

The general run of flower buyers today are not in a position to know just exactly what they want, unless they have given the floral art some study, but designers find that every customer has some natural instinct for flowers. By getting some of such a customer's ideas, though they may seem odd to us in some cases, and then combining these ideas with our own, we may find that the result is a good, well planned design, which excels anything that we could have devised without the aid of the customer's suggestions.

There are a great many so-called artists, painters of pictures, whom we have to deal with as customers, and they come to us with their ideas and try to influence us into their way of thinking. But in a great many cases, though they may be good painters of pictures, they have no true conception as to the proper arrangement of natural flowers. They have not the right idea as to the mechanical part of our work, but they want to subject the florists' art to the same rules as their own. Still it is better, if possible, to "take in" all their ideas, as by so doing we sometimes catch something that is of great value to us.

There are various ways of looking at our work and at the class of trade which we have to handle, but let me repeat emphatically, in closing, that designers will have to be more up-to-date and give a great deal of time and thought to their work, as the world is pushing on and the flower business needs all the resourceful, successful men that can be obtained.

A fan-shaped, flat spray of Shastas, backed by Adiantum hybridum, finished at its base by an especially large single flower in place of ribbon, and a bunch of some five or six black pansies added, with the card about halfway up one side, may be said to strike the keynote of sympathy as a funeral bouquet. Five or six dozen Shastas were used, having the smaller flowers at the flaring ends. Branches of the bridal wreath (not in flower) made a firm but airy foundation, being almost covered with the fern.

Black pansies are a possibility, both the velvet and the dull. One must judge

William Murphy.

(Superintendent Trades' Display at the Cincinnati Convention.)

by use whether dull or velvet ones look best with the principal flower in hand.

Forget-me-nots, too, where practical—that is, not having to be shipped a long distance or made up overnight—are effective in a bunch.

As buds are appropriate for the young, so is the full blown rose for one in or past the prime of life. For the same occasion a half dozen wide open white roses—Bride, I believe—were arranged in a careless bunch (very carefully) at the base of two straight cycas leaves, in the natural state, with a few pieces of Asparagus scandens deflexus among the roses and a ribbon, purple chiffon, the whole making a simple and effective arrangement.

When sending a number of pieces in wirework or spray, or both, to the same place, we try to vary the work by saving a particular flower for a particular piece, if possible, not mixing all kinds in every design. Or we use different ferns or foliage in the finish of the work, if it is most practical to mix the flowers somewhat in all.

Violet Sylvester.

THE PRAYER-BOOK MARKER.

The accompanying illustration shows the prayer-book marker used by the Bell Floral Co., Franklin, Pa., at some of its large weddings this season. There was the time when, if the bride carried a prayer book, it was a sign that the florist lost out so far as that part of his order went; at most she had only three or four spikes of valley between the leaves of the book, but the Bell Floral Co. has elaborated the marker until it partakes almost of the nature of a shower bouquet. The marker shown in the illustration was of gardenias with Farleyense fern, with a shower of valley. At one of the recent weddings, where this marker was used, there was an elaborate floral decoration. The local newspaper gave much space to a description of the florist's work and when it came to the flowers carried, had this to say:

"The bouquets of the bride and her young lady attendants were equally striking. The bride carried an ivory prayer book, with a magnificent floral marker, fashioned of gardenias and Farleyense fern, showered with lilies of the valley. The flowers of the matron of honor were an arm bouquet of white roses and sweet peas, and the maid of honor carried an arm bouquet of pink roses and sweet peas. The arm bouquets of the bridesmaids were pink roses and white sweet peas, fastened with light blue Dewdrop chiffon."

The Bell Floral Co. feels highly pleased with the success the prayer-book marker has attained, because they worked out the idea for themselves.

ETHICS OF THE FUNERAL TRADE.

The Review of July 29 contains, on page 4, some interesting matter on crepe chasing. The statements are good and to the point, but to my view nothing short of united effort on the part of the reputable dealers, in a sort of boycott deal with the unprincipled individuals who are practicing this method of obtaining business, will be effective. I will say of our city, Jamestown, N. Y., that the trade is clean on this score, but we are tainted with the touch from the outside, which stops at nothing to take trade away from the reliable firms doing business and paying taxes in our city.

There is also, to my mind, another objectionable practice in vogue in the funeral business. It is a common practice among undertakers to exact twenty per cent from the florists on all orders turned over to them. Personally, I am not catering to any such trade, though I have in the past frequently stood for it. The door piece is their entering wedge; then easily follows the soliciting of the family order. I cannot see why an undertaker is any more entitled to share the legitimate profits of the florist than is the doctor or any other person. I think this matter should be aired under its proper head. F. A. Dorman.

WASHINGTON AUTO PARADE.

After reading, with much interest, the accounts in several of the trade papers of the auto-floral-flag parade which we had in Washington, July 5, I notice that the official report of the judges has never been printed.

I would suggest that the judges' report would make a valuable clipping for the scrap book, as it shows clearly the classifications under which the parade was divided, and in event of such a parade in another city this information might be useful. I am therefore appending hereto a condensed copy of the official list of awards, which I trust you will find space to print in your columns. The names of the decorators of the machines have been added by me as far as I know.

Bell's Prayer-book Marker.

Sweepstakes, for the most beautiful car in parade, a swan boat. Decorated by Blackistone.

For the most beautiful car driven by a woman. Decorated by Blackistone.

Class A, gasoline and steam cars—First prize, for canopied car, with large basket of pink flowers on top. Decorated by Gude Bros. Co.

Second prize, for wistaria arbor. Decorated by Blackistone.

Third prize, for the yacht Defender. Decorated by Shaffer.

Fourth prize, awarded to four young ladies wearing pink hats, riding in a car decorated with pink and white. Decorated by Brooks.

Fifth prize, for miniature automobile, covered with green and ornamented with white flowers, operated by two children. Decorated by Marche & Co.

Class B, electric cars—First prize, for pink shell, operated by a woman dressed in pink. Decorated by Blackistone.

Second prize, for red, white and blue umbrella over car. Decorated by Shaffer.

Third prize, for car decorated in red top, white body, blue wheels and electric lights.

Class C, commercial cars, trucks, wagons, etc.—First prize, for delivery wagon trimmed in white and green cloth and roses. Decorated by Gude Bros. Co.

Second prize, for car decorated with grasses and palms and drawn by winged doves. Decorated by Marche & Co.

Third prize, for airship with tin propeller. Decorated by Blackistone.

Class D, motorcycles, all classes—First prize, for two Indians.

Second prize, for cyclist who rode a child on the front of his machine.

Third prize, for motorcyclist who decorated his machine in flags, forming a pyramid.

Most unique, grotesque, or humorous car. Decorated by Shaffer.

Added attractions — Silver loving cup, donated by citizens' Independence day committee, for any class of car most beautifully decorated in American flags only, known as the "Old Glory" prize, adornment in mauve and white. Decorated by Gude Bros. Co.

Blue ribbon, for decorator of the car winning the sweepstakes prize, the swan boat, awarded to Blackistone.

Z. D. B.

DIGITALIS.

In the Review of July 22, page 9, I notice you mention that digitalis can be sown now for next year's flowering. How can it be done? I have never been able to get more than five per cent to bloom if sown this late; even the June sowings failed to make good, and how provoking it is to sell to a customer a dozen or so of fine large plants in the spring and not have them bloom that season! The same thing happened with the Canterbury bells and now I give these the whole season's growth and thus avoid trouble, but if there is an easier way I should be glad to benefit by it. E. C. L.

The best months to sow digitalis (foxgloves) are May and June. Started then, I have never had any trouble in getting strong plants which flowered well the following year. I have sown them as late as July 20, but a considerable proportion of the seedlings from these late sowings will not bloom. If you sowed digitalis when first recommended in Seasonable Suggestions, you will now have strong plants in the field. The advice to sow as late as July is intended for growers who had overlooked the sowing of these useful perennials.

Of course, those sowing late cannot expect as good results with either Canterbury bells or digitalis as if they had sown in May. For the greatest success early sowing is advisable, but as you are aware it is difficult to make many growers understand the necessity of sowing, not only these perennials, but many other plants early. C. W.

THE STOTT SPRAYER.

In answer to the question in the Review of July 29, in regard to the Stott sprayer, which I consider the finest sprayer for roses and chrysanthemums on the market, there were only a limited number of them made and the only two firms that handle them, that I know of, are the Stumpp & Walter Co., 50 Barclay street, New York, and R. & J. Farquhar, South Market street, Boston, Mass. The Stott sprayer was made a few years ago in two forms, single and double.

Charles T. Beasley.

CARNATION NOTES.—EAST.

Treatment During Re-establishment.

As stated last week, the first watering after benching should be confined to the depression left around each plant when set. It must be remembered that the root system of a newly set plant is practically inactive, having no power to assimilate food. Consequently this first application of water is made merely for the purpose of settling the soil among the roots. The old practice of soaking the whole bench until a miniature rain storm occurred underneath has happily passed away.

Closely following this initial watering, a light spraying should be given, but care must be taken not to confound syringing with this operation.

Spraying is Not Syringing.

I have many times had occasion to correct the impression which is common among beginners in carnation culture, that these two operations are one and the same thing, and from observation I have reason to believe that there are those who, though they have long since passed the kindergarten stage, might profit by reference to the difference.

In the florists' trade we associate syringing with a strong force of water directed against the foliage of a plant and designed to dislodge some insect pest. Spraying is defined as the act of scattering a liquid in extremely fine particles, the result amounting practically to a mist. It should be apparent to anyone that the former will work injury to newly set plants, by swaying them about and destroying the bloom on the foliage, not to mention the oversupply of water received by the soil.

By running the water at about half head through the hose, using the thumb instead of the finger as a stopper, and directing the stream well up over the plants, the water will fall more or less in mist form, varying according to the pressure exerted by the thumb.

When the water supply is taken through the house in the pipe purlin, it becomes much heated in warm weather and is not the most desirable for spraying. It should be allowed, therefore, to run until cool, using that first run off to dampen the paths and space under raised benches, which should be done anyway.

Ventilation.

While benching the plants, and until active growth is resumed, ventilation must receive careful attention. Too much air will cause serious wilting, while keeping the houses too close has a debilitating effect on the plants. The carnation is preeminently a plant demanding breathing room, and the ventilation must be so arranged as to allow a gentle current of air to circulate among the plants even during reëstablishment.

The object of spraying is partly to furnish moisture that may be absorbed by the foliage, but the greater part of the water used serves to lower the temperature by evaporation into the air. Therefore we must have circulation of air, and the more minute the particles of water, the faster it evaporates. It follows, then, that only slow circulation is needed with proper spraying.

During cloudy or rainy periods little, if any, spraying is needed, but as much air should be furnished as is possible without causing wilt, and it will be obvious that ventilation can be indulged in more freely at night than during the day.

GEO. S. OSBORN.

CARNATION NOTES.—WEST.

Taking Note of Varieties.

During the season just passed you have made some notes, mentally if not otherwise, on the various varieties of carnations you were growing, both new and old, as to their relative value commercially. With those who keep up with the times by trying out the new varieties as they are introduced, this is a regular thing, and recurs every year. The old rule of the survival of the fittest must be strictly adhered to, if you would grow for profit.

My object in bringing up this matter at this time is for the purpose of reminding you to look over your notes again, before you begin planting your benches. They may need some correcting here and there. In some instances, varieties which pleased you greatly at one part of the season may have failed to keep up their good work later. On the other hand, some others, which failed to get a good start, may have made an extra good showing later in the season. In either case, the change may have come after your main propagating was done and too late to get the proper rating in your record book, or even after planting in the field had been done.

A System of Record-keeping.

We have a plan in operation here which we consider a good one. It saves us a great deal of worry at housing time, and, in fact, from the propagating season on.

About December 1 we draw a sketch of our houses, showing each bench and the number of plants required to fill it. Then we make a list of all the old varieties we wish to grow the next season, and allot space according to the quantity to be grown of each. Space is reserved for new varieties, seedlings, etc., sufficient to take care of them. On the list of varieties are also set down the number of plants to be benched and the number of plants to be planted in the field. When propagating and potting up, this list is constantly referred to, and it proves a great help. It is, of course, constantly subject to changes, according to the behavior of varieties, but no changes are made without due consideration, and once the question is decided, reference to the list eliminates any further study, unless conditions change again. Before housing time this list is again gone over and approved or corrected, as the case may be. Another good point is that no variety is likely to get squeezed out by being forgotten when space is allotted at the last moment.

A Comparison of Leading Sorts.

Last fall the variety Afterglow got a poor start with many growers, and some expected to discard it. Later, however, it got to going better, and made friends right and left. When other varieties bleached badly, Afterglow stood up finely. We shall bench all the plants we have this season. Winona was just the opposite. It was one of the first to come into crop last fall, and it made a fine record until hot weather. The hot sun bleaches it badly, unless shaded heavily. We consider it a splendid sort, however, and shall plant it in place of Winsor.

Victoria, a Lawson shade of pink, is one of the freest carnations we know of. It made a fine record last winter, but in hot weather it shows thrips specks as badly as Lawson. It has about the same quality of bloom as Lawson, but a much longer stem, and we consider it much better.

Pres. Seelye was very late in coming into bloom, had only ordinary quality with us, and was not a pure white. We understand that it was excellent on some places.

Sarah A. Hill failed to open properly until December. Then it was fine, except for the bursting, until warm weather set in again.

Lloyd was ruined for last season before it was sent out. The stock sent out could not make plants which would make a fair showing. The bloom is extra large, on a good stem. It has a pearly cast, and last season lacked somewhat in form. Plants in the field are quite different this season, and should do better.

Defiance could not afford to defy any

by use whether dull or velvet ones look best with the principal flower in hand.

Forget-me-nots, too, where practical—that is, not having to be shipped a long distance or made up overnight—are effective in a bunch.

As buds are appropriate for the young, so is the full blown rose for one in or past the prime of life. For the same occasion a half dozen wide open white roses—Bride, I believe—were arranged in a careless bunch (very carefully) at the base of two straight cycas leaves, in the natural state, with a few pieces of Asparagus scandens deflexus among the roses and a ribbon, purple chiffon, the whole making a simple and effective arrangement.

When sending a number of pieces in wirework or spray, or both, to the same place, we try to vary the work by saving a particular flower for a particular piece, if possible, not mixing all kinds in every design. Or we use different ferns or foliage in the finish of the work, if it is most practical to mix the flowers somewhat in all.

VIOLET SYLVESTER.

THE PRAYER-BOOK MARKER.

The accompanying illustration shows the prayer-book marker used by the Bell Floral Co., Franklin, Pa., at some of its large weddings this season. There was the time when, if the bride carried a prayer book, it was a sign that the florist lost out so far as that part of his order went; at most she had only three or four spikes of valley between the leaves of the book, but the Bell Floral Co. has elaborated the marker until it partakes almost of the nature of a shower bouquet. The marker shown in the illustration was of gardenias with Farleyense fern, with a shower of valley. the former will work injury to newly
plants, by swaying them about and
stroying the bloom on the foliage, not
mention the oversupply of water re-
ed by the soil.

By running the water at about half
d through the hose, using the thumb
ead of the finger as a stopper, and
ecting the stream well up over the
nts, the water will fall more or less in
st form, varying according to the
ssure exerted by the thumb.

When the water supply is taken through
e house in the pipe purlin, it becomes
ch heated in warm weather and is not
most desirable for spraying. It
uld be allowed, therefore, to run until
t, using that first run off to dampen
paths and space under raised
ches, which should be done anyway.

Ventilation.

While benching the plants, and until
ve growth is resumed, ventilation must
ive careful attention. Too much air
ll cause serious wilting, while keeping
houses too close has a debilitating ef-
fect on the plants. The carnation is pre-eminently a plant demanding breathing room, and the ventilation must be so arranged as to allow a gentle current of air to circulate among the plants even during reëstablishment.

The object of spraying is partly to furnish moisture that may be absorbed by the foliage, but the greater part of the water used serves to lower the temperature by evaporation into the air. Therefore we must have circulation of air, and the more minute the particles of water, the faster it evaporates. It follows, then, that only slow circulation is needed with proper spraying.

During cloudy or rainy periods little, if any, spraying is needed, but as much air should be furnished as is possible without causing wilt, and it will be obvious that ventilation can be indulged in more freely at night than during the day.

GEO. S. OSBORN.

CARNATION NOTES.—WEST.

Taking Note of Varieties.

During the season just passed you have made some notes, mentally if not otherwise, on the various varieties of carnations you were growing, both new and old, as to their relative value commercially. With those who keep up with the times by trying out the new varieties as they are introduced, this is a regular thing, and recurs every year. The old rule of the survival of the fittest must be strictly adhered to, if you would grow for profit.

My object in bringing up this matter at this time is for the purpose of reminding you to look over your notes again, before you begin planting your benches. They may need some correcting here and there. In some instances, varieties which pleased you greatly at one part of the season may have failed to keep up their good work later. On the other hand, some others, which failed to get a good start, may have made an extra good showing later in the season. In either case, the change may have come after your main propagating was done and too late to get the proper rating in your record book, or even after planting in the field had been done.

A System of Record-keeping.

We have a plan in operation here which we consider a good one. It saves us a great deal of worry at housing time, and, in fact, from the propagating season on.

About December 1 we draw a sketch of our houses, showing each bench and the number of plants required to fill it. Then we make a list of all the old varieties we wish to grow the next season, and allot space according to the quantity to be grown of each. Space is reserved for new varieties, seedlings, etc., sufficient to take care of them. On the list of varieties are also set down the number of plants to be benched and the number of plants to be planted in the field. When propagating and potting up, this list is constantly referred to, and it proves a great help. It is, of course, constantly subject to changes, according to the behavior of varieties, but no changes are made without due consideration, and once the question is decided, reference to the list eliminates any further study, unless conditions change again. Before housing time this list is again gone over and approved or corrected, as the case may be. Another good point is that no variety is likely to get squeezed out by being forgotten when space is allotted at the last moment.

A Comparison of Leading Sorts.

Last fall the variety Afterglow got a poor start with many growers, and some expected to discard it. Later, however, it got to going better, and made friends right and left. When other varieties bleached badly, Afterglow stood up finely. We shall bench all the plants we have this season. Winona was just the opposite. It was one of the first to come into crop last fall, and it made a fine record until hot weather. The hot sun bleaches it badly, unless shaded heavily. We consider it a splendid sort, however, and shall plant it in place of Winsor.

Victoria, a Lawson shade of pink, is one of the freest carnations we know of. It made a fine record last winter, but in hot weather it shows thrips specks as badly as Lawson. It has about the same quality of bloom as Lawson, but a much longer stem, and we consider it much better.

Pres. Seelye was very late in coming into bloom, had only ordinary quality with us, and was not a pure white. We understand that it was excellent on some places.

Sarah A. Hill failed to open properly until December. Then it was fine, except for the bursting, until warm weather set in again.

Lloyd was ruined for last season before it was sent out. The stock sent out could not make plants which would make a fair showing. The bloom is extra large, on a good stem. It has a pearly cast, and last season lacked somewhat in form. Plants in the field are quite different this season, and should do better.

Defiance could not afford to defy any

other scarlet variety that possesses any class at all.

Harvard also ran. It cannot be compared with Crimson Glow or Harlowarden.

May has made both friends and enemies. Some report excellent results, with increased planting for next season, while others report poor success. Our own were not so good as the season before, on account of red spider in the field. With clean plants, we expect it to be in its old form again this season.

In the list of older varieties there will be some changes, too. White Perfection still leads, with White Enchantress running about even. Vesper will not be grown as much as last season, while Lady Bountiful will be planted in about the same quantity as before. Enchantress is still popular and profitable. Rose-pink Enchantress lost friends last winter, but regained them at the end of the season by its beautiful color. Winsor will not be planted as much as last season, on account of its short stem. Aristocrat will hold on another season, but Pink Imperial will not be grown this season at all. In red, Victory and Beacon will be grown about equally — Beacon for midwinter and Victory to cover the whole season. Crimson Glow is our only crimson. A. F. J. Baur.

THRIPS.

Please tell me what is wrong with my carnations. The leaves come out twisted and with brownish spots on them. They are field grown. There is a tiny insect on them, of brownish yellow color and a little less than a sixteenth of an inch in length. Can you tell me what it is and the cause of it, and what can be done to rid the plants of the pest?

E. O. E.

The little insects you complain of are the well known thrips, which have been doing such enormous damage to florists' crops during the last few years. These little pests are apparently everywhere in greater or less numbers, both indoors and out, and almost every kind of flower crop must be protected against them. Some kinds of flowers suffer more severely from their stings than others and therefore need more protection. One of these is the carnation.

The most successful means for destroying them, known today, is nicotine in whatever shape it can be applied to the best advantage, in dry or liquid form.

As long as there are no blooms, an effective way is to dust the plants thoroughly with tobacco powder. Fumigating can be resorted to on cool nights, and spraying with a nicotine solution can be done almost any time. After the cutting of blooms begins, the latter is by far the most satisfactory, in my estimation. Begin your fight against them now and keep it up to the end of the blooming season. Do not be misled next winter into the belief that you have destroyed them all, if you do not see any of them, else you will be overrun again next spring. Spray regularly at intervals, as may seem necessary, as a preventive. A. F. J. B.

RED SPIDER.

I am sending a sample of carnation plants and would like to know what is the trouble with them. E. P. M.

The specimens forwarded were badly infested with red spider, and if you are to help the plants any, you must get at it at once. When plants once become badly infested with this pest, they are sure to do immense harm before they can be subdued. In the greenhouse there really is no excuse for their existence in such large numbers if a fair water pressure is at hand and no old stock of any kind is in the same house. A few applications of salt water followed by a hard syringing each time should clear them out, if taken in hand when the first ones are noticeable.

Sometimes in a dry season, like the one we had here last year, spider gives lots of trouble in the field. If only a few are taken out at planting time, they will multiply and overrun a large patch by midsummer. It is not possible to fight them so effectively in the field as can be done inside, so they just about have their own way. The way carnations are usually planted in the field, it is impossible to syringe each plant from both sides, as can be done on the benches inside. The same remedies you would use inside must be resorted to in the field, and they must be applied as effectively as circumstances will permit.

Last fall red spider was brought into the houses in larger numbers than had been done for many years. Few growers with whom I talked last winter failed to make the same complaint. In most cases they were not so numerous but that a few weeks of treatment eradicated them.

This season, so far, we have had rather more rain than we cared for, and the plants are quite clean at this time. With a couple of weeks of drier weather the plants this year should be in excellent condition for benching. A. F. J. B.

Progenitors of the Shasta Daisy.

OLD FORMS OF THE DAISY.

The group of daisies in the illustration was photographed at Santa Cruz, Cal., and includes some of the most pronounced varieties of the tall daisies still grown in old gardens there, the progenitors of the newer form called Shasta.

The rays or petals of one of the flowers are deeply cut or laciniated, so much so in some specimens as to nearly hide the yellow disk. This variety is about eighteen inches tall and is extremely beautiful. Another form has its rays or petals (a single row) emerging from the disk in a quilled shape. Another has three rows of rays, each row shorter than the one below. This one is yellow, tinged with white, and decidedly unique. Another, of the purest white, has the ends of the petals deeply cut and sometimes of a wavy or twisted form.

A form not shown in the illustration has large flowers and is only eight to nine inches tall. Plants made from cuttings and divisions and not allowed to blossom give many flowers during the wet season in the winter months of California.

The fringed daisy, already referred to, is about four inches in lateral diameter and nearly two inches in vertical diameter. This hanging or drooping character of the rays or petals certainly adds greatly to the beauty of the flower. The photograph gives only an incomplete and imperfect view of it.

Geo. J. Streator.

SCALE ON PALMS.

Will you please give me the best remedy for scale on kentias and other palms?

K. F. C.

Nicotine preparations are among the most effective remedies for scale insects on palms, but when the plants have been allowed to become badly infested with the insects it is best to sponge them off with a solution of nicotine soap or whale oil soap. In case these soaps are not at hand, then use a fairly strong solution of Ivory soap; for example, one ounce of the soap to a gallon of warm water.

Having got rid of the adult insects by means of the sponging, it is much easier to keep the plants clean by spraying twice a week with nicotine solution. W. H. T.

CARBOLINEUM.

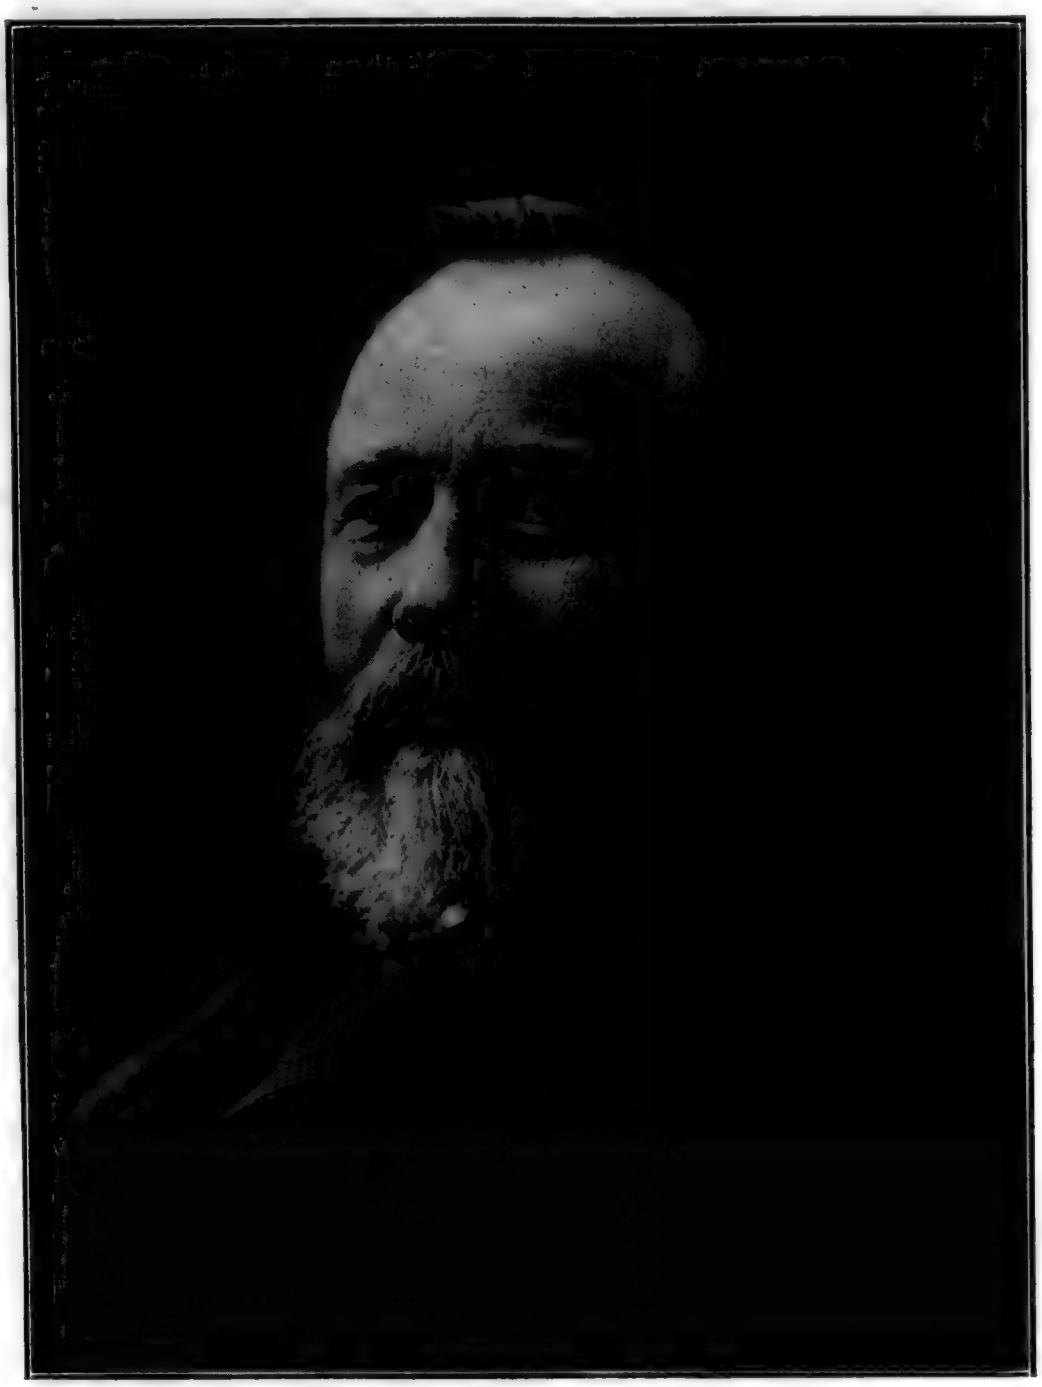
Referring to the recent discussion in the columns of the Review, regarding the use of carbolineum in greenhouses, I have to state that I have used it and found that it kept the greenhouses free from rot and free from bugs, but I could not get any kind of stock to do well in the houses in which it was used until after a year or more had elapsed.

I have found that by burning the posts enough to char them I have been able to make them last longer than with any other treatment. W. H. Morton.

JOHN CHARLTON.

John Charlton, of John Charlton & Sons, Rochester, N. Y., was born at Horningsham, Wiltshire, England, November 19, 1835. He received his education at the village school, an institution which in those days was somewhat limited in scope. Mr. Charlton was always fond of plants, flowers and fruits, and this induced him to take up the profession of gardener and afterward that of nurseryman.

At the age of 17 he was apprenticed at the gardens of Longleat, the magnificent county seat of the Marquis of Bath, then, as now, one of the show places of England. He was the one selected out of twenty-four applicants for the place, which paid a premium of 10 guineas ($52.50) for the position for three years. Longleat House stands in a large, spacious park and was laid out by "Capability" Brown, so called on account of his aptitude for such work. The park always carries 1,000 deer, which are quite an attraction to it. The park is also free to all for picnics, so long as the people do not abuse the privilege accorded them. It was on Prospect Hill, in this park, that Bishop Ken wrote the "Evening Hymn," so well known to thousands of English-speaking people.



Mr. Charlton spent the first year of his apprenticeship among the fruit trees and the wall fruits. The second year he was in the flower garden and the third year in the forcing house, where he became acquainted with the methods of growing bananas, grapes, pineapples, peaches, plums, cherries, figs, melons, etc., under glass, to his own great satisfaction.

He left Longleat three years, to a day, after the date of his going there, and then considered himself competent enough to go to the island of Guernsey to take charge of the garden of Peter de Jersey, one of the most prominent men of the island.

In the fall of the year 1856, Mr. Charlton landed at New York, a few days after attaining his majority. He spent the first winter in Canada and in the following spring came to Rochester, where he made his permanent home. He was engaged by the late Geo. J. Whitney, a director of the New York Central railroad, who had seen Mr. Charlton's advertisement for a situation as gardener in the Toronto Globe. He stayed with Mr. Whitney until fall, when Mr. Whitney got him a situation with Joseph Hall, a great horseman, miller and agricultural implement maker. In this position he remained until the death of Mr. Hall, six years later.

Then, in 1865, Mr. Charlton resolved to make his own venture in business and secured at that time two acres of land, on which he built his present home, and also a greenhouse, which he afterward replaced with larger and more commodious ones. He added to his land time and again, until he now has 129 acres under cultivation. He is associated with his two sons, John A. and Joseph M., under the firm name of John Charlton & Sons.

In 1869 Mr. Charlton introduced Ampelopsis Veitchii and advertised it in the Gardeners' Monthly, edited by Thos. Meehan, the first time in this country. In 1873 he raised the Peter Henderson tree carnation and sold it to Nanz & Neuner, of Louisville, Ky., in 1876, for $650. The introduction of this variety marked an epoch in the history of the carnation. He also introduced the Pocklington grape and the Golden Prolific gooseberry. He helped to introduce the James Vick strawberry.

John Charlton.

Mr. Charlton was among the first to grow hardy grapevines for market, and as an expert grower of fuchsias he was surpassed by none. The firm is noted, at the present time, for the growing of roses, flowering shrubs and peonies. In 1873, at the meeting of the Genesee Valley Horticultural Society, the firm's peonies took the first prize for the largest collection, the late C. M. Allen being one of the judges for the occasion. The late Mr. Corning, of Albany, went to Rochester to try to engage Mr. Charlton in his service, but as his relations with Mr. Hall, his employer, were most satisfactory, nothing came of it.

The Charlton Nursery Co. is distinct from John Charlton & Sons, doing a separate business. Joseph M. Charlton is president of the Charlton Nursery Co. and E. S. Osborne is secretary and treasurer. This firm is building up a large retail business.

John Charlton is now 74 years old and is young and sprightly for a man of his years.

GAS FOR RED SPIDER.

Could you give a beginner the most effectual way of getting rid of red spider? Will hydrocyanic gas kill them? If so, kindly give the amount for a house 22x94, twelve feet to the ridge. Would you advise this kind of fumigating? Will it kill insects? A. O. C.

Hydrocyanic acid gas will kill red spider and, in fact, all insect pests which are not in the soil. When in the soil the fumes do not seem to penetrate sufficiently to destroy cut-worms or other larvæ.

You do not state what plants are in the house you desire to fumigate. If you have been using it for carnations or some other crop which is now of no value, the simplest way to kill the spider will be to burn some sulphur in the house. If, however, plants are growing, which you want to save, you can try gas. During hot weather this and all other fumigants are more liable to injure vegetation. You should, therefore, choose a cool night for the operation.

Your house contains about 12,000 cubic feet. To destroy spider and mealy bug, I would advise using three stone jars. In each of these place one quart of sulphuric acid and one quart of water and drop in each five ounces of potassium cyanide. See that ventilators are tightly closed before commencing the operation. Wrap

other scarlet variety that possesses any class at all.

Harvard also ran. It cannot be compared with Crimson Glow or Harlowarden.

May has made both friends and enemies. Some report excellent results, with increased planting for next season, while others report poor success. Our own were not so good as the season before, on account of red spider in the field. With clean plants, we expect it to be in its old form again this season.

John Charlton.

GAS FOR RED SPIDER.

Could you give a beginner the most effectual way of getting rid of red spider? Will hydrocyanic gas kill them? If so, kindly give the amount for a house 22x94, twelve feet to the ridge. Would you advise this kind of fumigating? Will it kill insects? A. O. C.

Hydrocyanic acid gas will kill red spider and, in fact, all insect pests which are not in the soil. When in the soil the fumes do not seem to penetrate sufficiently to destroy cut worms or other larvae.

You do not state what plants are in the house you desire to fumigate. If you have been using it for carnations or some other crop which is now of no value, the simplest way to kill the spider will be to burn some sulphur in the house. If, however, plants are growing, which you want to save, you can try gas. During hot weather this and all other fumigants are more liable to injure vegetation. You should, therefore, choose a cool night for the operation.

Your house contains about 12,000 cubic feet. To destroy spider and mealy bug, I would advise using three stone jars. In each of these place one quart of sulphuric acid and one quart of water and drop in each five ounces of potassium cyanide. See that ventilators are tightly closed before commencing the operation. Wrap

the cyanide in packages and drop paper and all into the acid mixture. Start at one end of the house, drop in the package, and so on to the opposite end. Lose no time over the work, as the fumes are deadly. Lock the door and let no one on any consideration enter the house that night, or results will likely be serious if not fatal.

I have tried the foregoing strength for bug and spider and found it effectual. The acid is much heavier than the water and for aphis and other pests I prefer to weigh an equal amount of each. In the case of spider and bug, however, the foregoing amounts have been found effectual.

If you have any plants with tender foliage in your house, you must remove them, as they will not stand this fumigation during hot weather. Please remember that hydrocyanic acid gas is deadly to human beings, as well as insect pests, and if you decide to use it exercise great care and do not expose yourself to the fumes.

If you are afraid to use gas and want to try some other fumigant, the most effective one is nicotine extract evaporated over wood alcohol lamps. More than one dose of this is needed to kill spider. Once you have had some experience with gas, you will be able to decide on just what doses will kill out your various pests by a little experimenting and you will find it the most effective and simple of all fumigants. C. W.

LIME WATER FOR WORMS.

Is there any better thing for the destruction of earthworms than lime? I suppose that water can be made to take up only a certain amount of lime in solution, and would ask if this lime water would hurt any of the common greenhouse plants that might be treated with it several times for the destruction of worms. Such plants, for instance, as Begonia Gloire de Lorraine, cyclamen, Farleyense and asparagus? C. A. D.

Lime water is the simplest and cheapest method of driving earthworms from pots or tubs. Its moderate use will not injure any of the plants you have named. One application should be sufficient for a considerable time. There are a number of worm eradicators on the market. One named the Twentieth Century Worm Eradicator, manufactured by the Bon Arbor Chemical Co., Paterson, N. J., is specially good and inexpensive. C. W.

CHRYSANTHEMUMS

SEASONABLE SUGGESTIONS.

Feeding.

Many inquiries begin to reach me every year about this time regarding feeding the plants. "What is the best thing to use?" "How often should it be applied?" "How much should be given at each application?" and many similar requests arrive in almost every mail. Some growers seem to think that there is a set rule by which one can always feed the plants at a given time, in a certain manner, and be sure of the result, and they will offer to pay for the knowledge that they are sure I possess. Every plant grower knows that there is no short cut to knowledge of this description, but that it is acquired only by personal study and experience, and an intimate knowledge of the local conditions governing the case in each instance.

Broadly speaking, the plants should not need any additional feeding for from eight to ten weeks after planting, if the soil was properly prepared in the first place. Stock that was benched in May will now be benefited by a little feeding, but later planted stock does not yet need anything. In the case of pot plants, do not feed them till the soil is full of roots and the plant is potbound, as gardeners call it. The mum is a gross feeder, and will take a great deal of nourishment under proper conditions, but liquid fertilizer applied to a bench or pot does far more harm than good to the plants, if the roots are not in a condition to take it up.

A Light Mulch.

I believe in lightly mulching the beds with rotten manure, first sprinkling some bone flour on the surface and scratching up the soil. This mulch will keep the plants from drying out too rapidly, and it will bring the roots to the surface to get the benefit of the bone. On no account should fresh manure be used, as it is liable to burn the leaves and all the feeding roots and do much more harm than good. Manure that is decomposed enough to run readily through a soil pulverizer is about right. Some growers think that a mulch induces the plants to sucker more than they otherwise would, but, even if this is so, the good it does more than counterbalances the harm.

As to liquid fertilizers to use, most experienced growers have their own formulas, which experience has taught them are best fitted for their soil and conditions. The chemicals most generally used are nitrate of soda, sulphate of ammonia and nitrate of potash.

A Good Fertilizer.

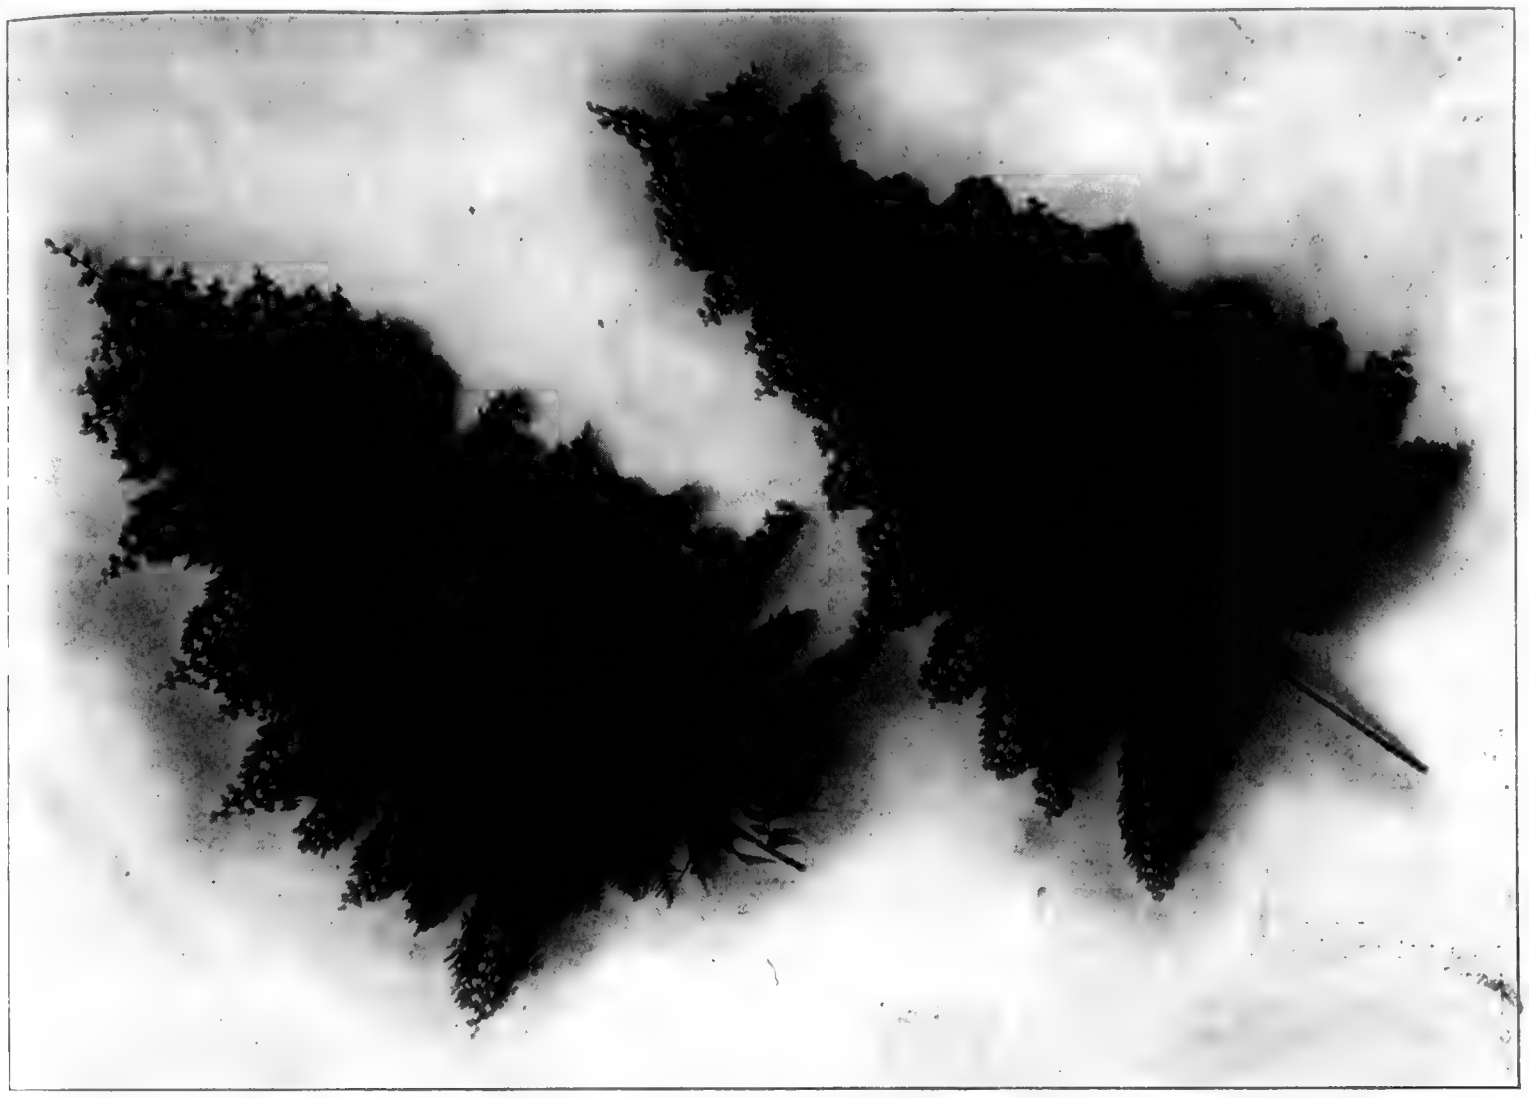
The nitrate of potash is the best, according to my experience, and the nitrate of soda the most dangerous. I say dangerous, because I have seen it do more harm than good on more than one occasion. The potash, combining, as it does, both the nitrogen and potash, has given me the best results, though a plant can be fed with the sulphate of ammonia later, with safety. The proper proportion is a 4-inch pot to a 50-gallon barrel of water. This is safe, and may be applied every ten days, if thought necessary.

Latterly I have been using a patent fertilizer that a chemist worked out, partly from my experiments, and with this I no longer buy any other chemical.

Liquid solutions made from natural manures are good, used alternately with chemicals, cow and sheep manure being the most favored.

Some growers think that plants are better not to have any feed until the bud is formed. This is a fallacy. Feed your plants now, by all means, if they have been planted long enough to need it, and they will produce larger and better buds than they would if left alone. I would rather feed my plants more now and less after the bud is taken, because then the plant has a chance to take all the excess food out of the soil before the bud has swelled too much, and there is less danger of the flower damping when it is finishing. Charles H. Totty.

LEAF SPOT ON MUMS.



I herewith enclose a few leaves of chrysanthemums. What is the trouble, and its cause and remedy? It seems to work in sections and on individual plants throughout the house. It begins with light yellow dots and continues until the entire leaf is dried up on the stem. It is entirely on the older parts of the plants. W. K.

The trouble is known generally as leaf-spot, and is due in a measure to close planting, which prevents the sun and air from having proper access to the bench and the lower leaves of the plants. It does no great harm to the plants to have them lose a few of the lower leaves, but if the trouble gets serious it should be taken in hand. Pick off all the affected leaves and then spray the under side of the lower leaves of the plants with either Bordeaux mixture or potassium sulphide (liver of sulphur).

After spraying your plants with this solution, they should be kept on the dry side as regards syringing. Be careful to see that they are always dry by nightfall, and that on dull days no syringing at all is done. By this means no serious harm should result, as the losing of the lower leaves is a more or less natural condition in the life of the plant, as the stem gets hard and woody, and it is merely hastened by the action of the fungoid disease, which always appears in the center of the bench where the sun cannot penetrate. C. H. Totty.

BLACK FLY ON MUMS.

Kindly inform me as to the best way of exterminating the black fly on

Fronds of the New Fluffy Fern, Nephrolepis Pruessneri.

chrysanthemums. I have tried several methods, but never succeeded entirely in destroying this pest. F. W. Z.

After repeated experiments, I have fixed on tobacco dust as the cheapest and best agent for killing black fly and green fly. I use the fumigating kind, as advertised in the Review, and at a trifling cost am enabled to keep my plants clean all summer.

The spraying mixtures are good, but it takes more or less time to apply them, while with the dust it is simply a matter of setting it on fire and closing down the house. If the plants are treated to several fumigations shortly after being planted, they can be got perfectly clean, and then, with the friendly aid of the ladybugs, they will keep clean till well into September.

I have never seen the foliage burnt to any extent when using tobacco dust, but we used to have trouble often when using the old stems, not to mention the nuisance of staying in the house while fumigating.

A good grade of tobacco dust, bought from a reliable dealer, will work just as effectually in a carnation house, but it should not be used with roses, as it will discolor pink roses and render the buds worthless for weeks. I mention this so that F. W. Z. may not conclude that what is sauce for the goose is also sauce for the gander, and use it on all his plants the same way.

C. H. Totty.

Cromwell, Conn.—The A. N. Pierson Co. is adding two greenhouses at Plant No. 2.

Peoria, Ill.—Ed Dusinbery, formerly foreman of the Kuhl greenhouses, was here from Kalamazoo, Mich., on a visit.

NEPHROLEPIS PRUESSNERI.

For some time there have been reports in the trade of a new crested fern grown and used by a florist in the southwest. The stories of its character were so favorable that the Review hunted up the grower, who was found to be J. D. Pruessner, Galveston, Tex., and secured the photograph of the fronds reproduced herewith.

Mr. Pruessner states that the variety originated with him some four years ago. He has been working up stock of it, and found that it made an excellent specimen, showing full character, in small pots. The fronds are thick and fluffy, tripinnate in their makeup. Whitmani is generally considered among the best of the crested or fluffy variations from the original Boston type, but Mr. Pruessner thinks his new variety an improvement on Whitmani, because of its broad and double fronds, and its habit of growth in small pots. He has been using it in his retail trade at Galveston, and has done a large business with it as a table fern.

DISEASE ON GERANIUMS.

I am sending sample of geranium foliage, which is diseased. Will you name the disease and give remedy, if possible? Will it be necessary to destroy all my stock plants? D. B.

Unless you have the disease in a virulent form, there would seem to be no good reason for your destroying all your stock plants. This is a common disease and the best growers are just as liable to have it as the small and less experienced ones. Outdoors it is usually due to spells of hot, moist, sunless weather; indoors, to an excess of nitrogenous manure in the soil. The remedy in each case is to pick over badly affected plants. If the plants seem hopeless, destroy them.

Drier conditions at the root and in the atmosphere tend to check the disease and plants usually recover. It is better not to propagate from the plants most diseased. It is much too early to commence this, and if your stock in September is not in good shape, better buy from a reputable source. I rather think, however, that your plants will grow out of the trouble before the time to take cuttings. C. W.

REPLANTING CALLAS.

I have a raised bed of callas which I am drying off. After they are thoroughly dried, should I take them out and change the soil?

J. H. S.

By all means lift your callas when dried off, and renew the soil. You will find there are many small bulblets that are of no use. A number of others of medium size will soon develop into strong flowering roots. From the middle to the end of August is a suitable time to replant the callas. Use for compost two-thirds fibrous loam and one-third decayed cow manure, adding a sprinkling of bone meal to it. Prepare the soil at once, if not yet mixed. I have had the best success in starting the callas in 5-inch pots and later transferring them to the bench. C. W.

East Rochester, N. H.—E. A. Corson is erecting another greenhouse.

h cyanide in packages and drop paper and all into the acid mixture. Start at one end of the house, drop in the package, and so on to the opposite end. Lose no time over the work, as the fumes are deadly. Lock the door and let no one on my consideration enter the house that night, or results will likely be serious if not fatal.

I have tried the foregoing strength for mealy bug, red spider and found it effectual. The acid is much heavier than the water and for aphis and other pests I prefer to weigh an equal amount of each. In the case of spider and bug, however, the foregoing amounts have been found effectual.

If you have any plants with tender foliage in your house, you must remove them, as they will not stand this fumigation, even for a weather. Please remember that cyanide acid gas is deadly to human beings, as well as insect pests, and if you decide to use it exercise great care and do not expose yourself to the fumes.

If you are afraid to use gas and want to try some other fumigant, the most effective one is nicotine extract evaporated over wood alcohol lamps. More than one dose of this is needed to kill spider. Once you have had some experience with gas you will be able to decide on just what doses will kill out your various pests by a little experimenting and you will find it the most effective and simple of all fumigants. C. W.

LIME WATER FOR WORMS.

Is there any better thing for the destruction of earthworms than lime? I suppose that water can be made to take up only a certain amount of lime, and would ask if this lime would hurt any of the common house plants that might be treated it several times for the destruction worms. Such plants, for instance Begonia Gloire de Lorraine, ex Farleyense and asparagus? C

Lime water is the simplest and most method of driving earthworms pots or tubs. Its moderate use injure any of the plants you have One application should be sufficient a considerable time. There are ber of worm eradicators on the One named the Twentieth Century Eradicator, manufactured by Arbor Chemical Co., Paterson, N specially good and inexpensive.

CHRYSANTHEMUMS

SEASONABLE SUGGESTIONS.

Feeding.

Many inquiries begin to reach me every year about this time regarding feeding the plants. "What is the best thing to use?" "How often should it be applied?" "How much should be given at each application?" and many similar requests arrive in almost every mail. Some growers seem to think that there is a set rule by which one can always feed the plants at a given time, in a set way, and must be sure of the result, and they will offer to pay for the knowledge that they are sure I possess. Every plant grower knows that there is a short cut to the knowledge of this one step further, but that it is acquired only by personal study and experience, and an exact knowledge of the local conditions governing the case in each instance.

Generally speaking, the plants should need any additional feeding for from three to six weeks after planting, if the soil is properly prepared to the first. Stock that was benched in May will be benefited by a little feeding, but later plant stock does not yet need anything. In the case of pot plants, do not feed them till the soil is full of roots and the plant's pothound, as gardeners call it. The name is a gross misnomer, and will take a great deal of root starvation under proper conditions, but a rich diet applied to a bench or pot does a lot more harm than good to the plants if the roots are not in a condition to take it up.

A Light Mulch.

I suggest a light dressing between the beds of rotten manure, first sprinkling some bone flour on the surface and scratching it in the soil. This mulch will keep the plants from drying out too rapidly, and will bring the roots to the surface to get the benefit of the bone. On no account should fresh manure be used, as it is liable to burn the leaves and all the feeding roots and do much more harm than good. Manure that is decomposed enough to run readily through a soil pulverizer is about right. Some growers think that a mulch induces the plants to sucker more than they otherwise would, but, even if this is so, the good it does more than counterbalances the harm.

As to liquid fertilizers to use, most experienced growers have their own formulas, which experience has taught them are best fitted for their soil and conditions. The chemicals most generally used are nitrate of soda, sulphate of ammonia and nitrate of potash.

WEAK RUNNING WOOD.

The shoots on my young American Beauty roses are inclined to run up in the air. Is it best to cut these back pretty low with the idea of making them branch from the base, or let them grow up and bloom and cut short-stemmed flowers? A. G. L.

If you do not require an early crop of Beauties and the canes persist in running, it would be better to keep cutting them down to a good eye, in order to make them break. To prevent running, keep them a little drier and give free ventilation. This usually will stop them from making weak running wood.

Care must be taken not to cut out too much of the wood at one time, as this has a tendency to stop root action and produce the very trouble it is designed to cure. Ribes.

CARE OF THE YOUNG STOCK.

Staking and Training.

Staking and training the young growth should now occupy our attention. If this is neglected and the stock acquires a rambling and trailing habit by being allowed to scramble over the bench at will, there is sure to be a prolific crop of blind wood.

By keeping the young shoots in an upright position the flow of sap is directed to the proper eyes for the future crop. This also allows a free circulation of air among the leaves, thus giving them firmness of texture and allowing a full complement of light to reach and mature the eyes for future use. It also facilitates syringing, by keeping the foliage in a position where the operator can reach with the spray both the top and under sides of the leaves, and as this is most essential in order to keep down spider, any neglect in this respect will be followed by an increase of the trouble.

The tying ought to be done in a nice, tidy manner, keeping each shoot separate and not tying too tightly, so as to cut into the bark and impede the flow of sap.

Removal of Suckers.

Where grafted stock is used, it is well to keep a sharp watch of the tying, so that it does not cut into the bark, and the stocks should also be kept free from suckers. If these are taken in time, they can be rubbed off with the finger without any injury to the plant, but, if left on long enough to get hard, a sharp knife should be used for their removal, so as to leave a wound that will heal readily.

Keep the houses clear of weeds and dirt. Especial care should be given to the spaces under the benches and in corners, for, if weeds are allowed to spring up and grow, they afford excellent breeding places for spider and thrips.

Keep the atmosphere at all times moist by using the syringe frequently and watering the paths and the ground under the benches.

The earlier planted houses will require disbudding, and this, in the interests of the future crop, should be attended to as soon as needed. Ribes.

TERMITES OR WHITE ANTS.

We noticed in the Review of July 22 an answer from C. W. to L. regarding termites on roses. It seems to us that C. W., in his reply, is speaking of a different pest from the one referred to in the query. Sterilization of the soil would in no way affect the termites, or white ants, as we call them, as they are never in the soil at the time the soil is placed in the benches. We believe these insects are only well known in the south and are very destructive to hard-wooded plants. Their method of attack is by ascending the pith of the body of the plant and hollowing out the interior.

We have tried bisulphide of carbon as a remedy, but on account of the expense it was not tried extensively enough for us to tell if it was effective or not. We have also tried painting the benches with crude oil, also with sulphur and lime, but with no results. As the insects usually enter the benches by ascending the bench legs, we at one time thought we had a remedy by painting the bench legs with tar. This also proved to be of no avail, as the insects would eat their way up the center of the bench legs, where the tar could not reach. Someone has suggested moth balls, buried at intervals in the soil. We are trying these at the present time under infested palm tubs and around the base of posts, but the experiment has not proceeded far enough at this time for us to say if the balls will be effective or not.

We long ago came to the conclusion that the best way to fight this insect is on the preventive plan. As the insect's food consists of wood pulp, it is important that all rubbish, such as chips, pieces of plank, etc., should be kept from under the benches. Should a bench once become infested, we have found the best plan to be to throw out the entire bench and build anew. We have several times done this when the bench had only been in the second year. When refilling benches in the summer, any planks that show signs of the ants should be removed. Do not delude yourself with the hope, because you see no ants, that they are not there, as they have merely retreated to the heart of the planks and will reappear as soon as the new soil is in and moisture applied.

Charles Vestal.

SEASONABLE SUGGESTIONS

Asters.

The latest sowing of asters should be planted in the field on the first favorable opportunity. Chances for putting out young stock during the present summer have been hazardous over a large portion of the country. While some sections report too much rain, the whole eastern seaboard has suffered from one of the most severe droughts in its history. With the ground dust-dry and a shade temperature of 90 degrees, it is useless setting out young plants, unless they have good balls of earth thoroughly wetted and are also watered after planting. Then keep the ground constantly stirred, and with the first rains your plants will jump.

The season can hardly be classed as a satisfactory all-around one for asters so far. They love abundant moisture, which has been lacking this year. They stand droughty conditions surprisingly well, but shorter stems are the rule, unless means for watering are at command. At this time, when carnations are near the vanishing point, roses poor and sweet peas getting inferior in many cases, the value of a good aster bed to the retail florist can hardly be overestimated.

Pull out any plants attacked by stem-rot or the yellows. It is of no use leaving these in the ground, as no remedial treatment will be of any avail for them. If the aster beetle makes its appearance, it will work great damage, unless speedily checked. Hand picking is often resorted to, but if many of them appear, it is better to spray the plants with Paris green at the rate of one pound to 200 gallons of water. This strength will not hurt the plants, but it will destroy the beetles, and any slight discoloration of flowers is easily washed out. Do not use any poisons of an adhesive nature, such as arsenate of lead, as they whiten the foliage and render the flowers unsightly and unsalable.

Genistas.

Look over the genistas occasionally and give them a pinching back or shearing. Their growth is now rapid, and if you want close, compact heads, the kind

Dendrobium Euosmum.

mostly in demand, you must keep them rather closely cropped. Young stock rooted in late winter should now be in 5-inch or 6-inch pots. If they can be plunged in a bed of coal ashes in an open, sunny spot, where the hose can conveniently reach them, they will make a lot of growth during the next two months.

Variegated Vinca.

There is every season a big call for variegated vinca. If your stock of it is not as large as you could wish, look over the stock plants in the field. You will notice plenty of strong, succulent growths starting from the base. Take off a quantity of these and place in the cutting bench. Pot them off singly when rooted. Stand along the edges of your carnation or other benches during winter, if no other space is at command, and they will make serviceable plants for next summer sales.

Geraniums.

Some anxious inquirers are wondering if this is not a good time to start propagating geraniums, being anxious to work up a good stock. It will not pay to do any such propagating now. In such torrid weather as we customarily get in August, the greater part of the soft cuttings will assuredly damp off. Wait until September in the northern states and October, or even later, in the southern states, and you will have only a small percentage of loss. Geraniums which have been kept continuously under glass are much less liable to damp off than such as have been grown outdoors. The latter are softer and more full of sap, and it is a great mistake to attempt their propagation until we get cooler weather.

Hard-wooded Plants.

Intensely hot weather is hard on many of the ericaceous and other hard-wooded plants. Unless watering is carefully attended to, some of them are liable to get dried out completely, in which case it is often impossible to save them. Where not planted out, which is the best summer treatment for this class of plants, the pots should at least be plunged to the rims in soil or cinders, and a thorough wetting overhead with the hose two or three times a day when hot will greatly benefit them. The old theory about its being dangerous to syringe plants during sunshine is all moonshine, and both outdoors and under glass plants are greatly refreshed by wettings overhead during the hottest part of the day.

Annual Lupines.

During the last two years lupines have jumped into favor for indoor culture in the big eastern markets and the better class of flower stores are always pleased to get hold of some such desirable novelty. Lupines succeed well in a night temperature of 45 to 50 degrees. The seed for Christmas flowering ought to be started early in August and can be either sown directly in the benches or in small pots to be planted out later. The annual pink variety forces readily, while Hartwegii, in shades of blue and white, and mutabilis make strong spikes and are handsome in vases. These lupines will yield a succession of spikes for a good many weeks. Their culture is similar to that of antirrhinums.

Brief Reminders.

Syringe plants freely overhead during hot weather, but let the foliage become dry before nightfall.

Remove runners from violets in the field and ply the cultivator constantly among them.

Order your cyclamen seed at once, if not yet bought. Remember the best is the cheapest.

Remove flower stems from winter geraniums and pinch all strong shoots.

Root some heliotropes, where plants are required for winter blooming.

Push ahead the filling of benches for carnations. The earlier the plants are in the better.

Take advantage of moist weather to transplant seedlings of perennials and biennials to nursery rows.

Watch seedling cinerarias closely, so that no caterpillars can destroy the foliage.

Look over genistas and give them an occasional pinching or shearing to keep them shapely.

DENDROBIUM EUOSMUM.

The genus dendrobium is so extensive that there are few days in the year when in a collection of orchids some members of it are not in bloom. The five varieties most in evidence commercially are D. nobile, Wardianum, formosum giganteum, Phalænopsis Schrœderianum and the summer-blooming thyrsiflorum. The last named is not adapted for cutting, but plants carrying several racemes are decorative and sell well. D. euosmum is one of the earlier hybrids and is the result of a cross between D. andocharis and D. nobile. It flowers in midwinter, just ahead of nobile. The sepals and petals are pure white, the lip being dark maroon. The bulbs are thinner and somewhat shorter than those of nobile and the flowers are deliciously scented. A close, steamy house when growing in summer, and drier and cooler quarters when the bulbs are made up, will cause them to flower well. Rather small baskets or pans are suitable to grow this variety in. It was originally raised by Veitch, of London. W. N. CRAIG.

SEASONABLE ORCHID NOTES.

Oncidium Varicosum Rogersi.

This popular oncidium is indispensable where cut orchids are in demand. It is also fine for mantel and mirror decorations, while for the fall shows it can hardly be beaten. It is now offered at cheap rates, and as it is not at all a

WEAK RUNNING WOOD.
